light, rolled steel sash and skylights, fire doors. Contract awarded to M. B. Markland, Guarantee Trust Building, Atlantic City.

**School**, Mt. Ephraim, N. J. Architect, J. L. Coneys, Drexel Building, Philadelphia. Owners, Board of Education, Township of Center, Camden County, N. J. New toilets, plumbing, electric work. Contract awarded A. J. Voegtlin, Camden, N. J. Plumbing, Charles Laepold, Camden, N. J. Electric, Mr. Roeker, Camden, N. J.

**Residence (alts. and add.)**, Cinnaminson, N. J. Architect, J. Fletcher Street, 1120 Locust street, Philadelphia. Owner, William Parry, Cinnaminson, N. J. General alterations. Contract awarded to John McVaughan, Riverton, N. J.

## Delaware

### Construction News

**Road Work**, Delaware. 0.508 miles. Contract C. K. 17, through Frederica, 1,200 cubic yards excavation, 50 tons broken stone base course, 890 cubic yards cement concrete pavement. Low bidder: Juniata Co., Empire Building, Philadelphia, \$19,738.

C. S. 27, Clarksville to Bethany Beach, 11,500 cubic yards excavation, 6,100 cubic yards cement concrete pavement or slag cement concrete. Low bidder: Plain Cenc. Highway Engr. & Cons. Co., Selbyville, Del., \$122,419; slag concrete, Highway Engr. & Const. Co., Selbyville, Del., \$117,539.

42 A. 120-foot temp. timber bridge, 10 feet wide, Seaford. Low bidder, Delaware Cons. Co., Wilmington, Del., \$4,733.

**Residence**, Wilmington, Del. Architect, W. K. Durham, 1345 Pine street, Philadelphia. Owner, G. L. Armstrong, Wilmington, Del. Brick, 2½ stories, 28x40 feet, hot water heat, electric light, metal lath, tile and marble work, slate roof, hardwood and pine floors. Owner ready for general bids.

## Miscellaneous

### Construction News

**Residence**, Galion, Ohio. Architect, A. Martin Stern, 413 North Thirty-eighth street, Philadelphia. Owner, Mr. Ernest L. Klopp, 217 South Union street, Galion, Ohio. Brick, 2 stories, 30x70 feet (heating reserved), electric light, tile work, shingle roof, hardwood floors. Henry Hoeker, Galion, Ohio, will build and is ready for sub-bids.

### SAVING THE SURFACE THEREBY SAVING ALL

*Paint Protects and Decorates Your Home*

ROBERT TAYLOR JONES

*Technical Director Northwestern Division*

**W**HEN you are ready to paint your house, do not think of painting as being merely decorative. Paint has a real value as a protection. Without it much of the exposed wood and metal in your home would soon decay.

Of course, there are all kinds of paints, and there are other ways of preserving materials than by spreading paint over them. For example, there are varnishes and preservative stains, but all these substances may be put on by the painter and are known as "painter's work." For this reason this article deals not only with

common paint, but with these other materials that are used as decorative and preservative coverings for interior and exterior woodwork.

Paint is a very simple matter as far as its composition is concerned. Essentially it is only an oil containing pigments. We all know what an oil is. The pigment is a body of mineral matter which, upon exposure, forms a cement. It is bound in the oil to make a film which we call a coat of paint. The pigment carries the color. As far as this is concerned, we might take coal oil, chalk and brick dust expecting to get red paint, but we would not realize much on our expectations.

The oil used in paint has to be of a special nature such that when it comes into contact with the air or oxygen it will turn into a jelly. For the most satisfactory results, linseed oil is necessary. When materials oxidize, they burn. So paint starts to decompose as soon as it is exposed to the air. That is one of the reasons it has to be renewed at regular intervals. Just remember that there is no substitute for good linseed oil in paint.

The pigment must have a nature such that it will unite properly with the oil and with the various elements of which the pigment is composed to make a thin, dense film that will defy the elements for a long time. Mere colored chalk and the best oil would not be satisfactory; neither would good pigment and cheap oil. A satisfactory paint is one which has a high grade oil combined with a pigment which has known qualities of durability.

To these elements are added two others. One of them is turpentine and the other is a dryer. Turpentine is used to thin the paint. It makes the paint carry over a greater distance. Too much of it, of course, is objectionable. The dryer is a compound which is added to hasten the oxidizing of the oil and the hardening of the pigment. If too much dryer is added, the durability of the paint is seriously reduced.

The pigments that are commonly used are carboante of lead—"white lead"—and zinc oxide. Sometimes a minor quantity of other materials is added to ready mixed paints in a formula that manufacturers have tested and proved.

If paint is to be mixed on the job, it is safe only to use these well known compounds—pure linseed oil, pure white lead and zinc oxide, pure turpentine, and a small amount of dryer. No substitutes should be used for any of these materials. In the hands of an experienced painter who knows how to mix an apply paints, the result from using this mixture in proper proportions should be good.

Paint manufacturers have realized the difficulty of always obtaining a high grade paint when it is mixed on the job so they

have worked out ready mixed paints in which only the most superior oils and pigments are used. These ready made paints are supplied in sealed cans with the manufacturer's label attached. Many architects, to make sure that the paint will be of a uniformly high grade, require that only the product of well known manufacturers be used, and that it must be delivered on the job in cans or containers unopened.

Perhaps I should have said before this that no painting, staining, or varnishing of any kind can be done until the surface is ready for the work. The wood must be clean and it must be dry. These two essentials come at the very top of the list of requirements of good painting.

The first coat should have a large amount of oil in it so it will penetrate the wood and fill up the pores. Outside woodwork, siding, etc., should be painted practically as fast as it is put in position. This keeps the wood dry so that subsequent coats will properly adhere. In first class work, inside woodwork is "back painted," or has its back surfaces sealed with shellac before the wood is nailed into position, as this tends to keep the wood from absorbing moisture which may have remained in the walls.

Well seasoned lumber is absolutely necessary as a basis for good painting. If the wood is well seasoned dampness will not ooze out of it and peel or blister the paint. Some grades of lumber used as a basis for painting contain pockets of pitch or streaks of rosin. This material lies about knot holes. The painter should seal up these places with shellac before the painting is done. Otherwise they will stain the finish. Of course, it goes without saying that outside painting cannot be carried on when it is raining. It is not even wise to paint when rain threatens. It may be remembered also that exterior painting cannot be satisfactorily carried on in cold weather.

Remember that two coats are far better than one, and three coats are far better than two. Two thick coats are nothing like as good as three thin coats in which the same quantities are used. If you start out with three coats of good paint on your outside walls and have them repainted with an additional coat every two years, the woodwork will remain in good condition and your house should always look well.

Painted trim for inside finish is becoming more and more popular. It may be left glossy or it may be rubbed with pumice to get a flat or eggshell finish. Flat drying paints of a special composition different from the usual lead, zinc, turpentine, and oil combination may also be used.

If you wish to have enamel finish, this must have as a base at least two coats of paint—three are better—or enamel under

coating, for enamel is somewhat transparent, and unless the paint should cover up the wood thoroughly the grain of the wood will show through. The flat, egg-shell or rubbed effects in enamel will not stand up under the repeated washings as well as the full gloss enamels. But you may prefer the lower tone of the dull finish.

#### *Many Kinds of Wood Stain*

Another material that is used for finishing of woods is stain. There are many kinds of stain, but they are all composed essentially of a vehicle which carries a dye to stain the wood. Paint manufacturers have put these wood stains into several classes depending largely on the vehicle that is used to carry the stain or pigment.

First there is the penetrating oil stain which is generally an aniline dye in a base of benzol or naphtha. This stain penetrates the wood deeply and carries the color into the fibre. It has the property of not raising the grain of the wood and is therefore especially suitable for soft woods. A coat of shellac is put over this stain so that it will not work up into the varnish and cloud it.

Then there are acid stains in which acetic acid or vinegar is used with a dye. The acid stains penetrate the wood very deeply. They are open to the objection that they raise the grain of the wood, so that before they are put on it is desirable to sponge the wood with clear water and when the grain has raised, to sandpaper it off smoothly before putting on the stain. A stain for fumed oak is sometimes known as acid stain. It is really an alkaline stain, being mainly composed of ammonia. The acid stains have the virtue of giving very brilliant effects when applied by a good painter. Shellac is also used over this stain with wax or varnish as a finish coat.

A third type of stain is known as the oil and pigment stain. It is especially devised for exteriors. It can also be used for interior trim, especially on soft woods.

In the hands of a skillful painter, stains can be made to gain beautiful effects, the particular kind of stain used being somewhat determined by the affect that is desired. In general it is desirable to cover them with a protective coat of shellac if varnish is used for a final coat. The shellac is also necessary if the beautiful waxed finish is desired.

#### *Mysterious Varnish*

If you will call on any up-to-date paint dealer he will show you a wide selection of wood samples stained with the different kinds of stains so that you can make the selection of a stain in the color and finish that you want. Here again your safety lies in selecting the product of a reputable manufacturer and making sure that it is delivered on the

job in containers that have not been previously opened.

The third and most important material used by the painter is varnish. This is truly a mystery.

Nobody but the varnish manufacturer knows what goes into it. It is essentially composed of gums, oils, and turpentine. Some of the oils are imported from China. Some of the gum is a fossil which is dug in Australia. Inferior varnishes are made of excessive quantities of cheap resin gums and oils. These wear out, lose their gloss, or stain too readily. Expensive materials used in compounds that are out of balance give results that are unsatisfactory. For example, chemists show that an excessive amount of China wood oil used in varnish will make it highly resistant to water staining, but that this property is gained at the expense of durability. It requires expert manufacturing and compounding to keep the proper balance between these things.

#### *Get the Right Varnish*

On account of the different requirements that are made of varnish such as for floor coverings, furniture, trim, outside work, varnish that is to be subjected to hot water, acid, and so on, manufacturers have produced a great many kinds, each one of which has qualities which especially fit it for particular uses. You will see that the kind of varnish that would be suitable for a chair would not generally be best for a floor, and so on.

Since the varnish matter is such a closed book to everybody but the manufacturers, the only recourse that the layman has is to use the product of a manufacturer who bears reputation which has stood the test of time. When a manufacturer thinks enough of his product to print his name upon the label and then stand behind that product guaranteeing absolute satisfaction, and when that manufacturer remains in business a long term of years and has a continuous reputation for superior products, you have a right to expect satisfactory results.

#### *When a Day's Delay Pays*

It must be said that certain conditions other than those of the varnish must be right if the varnish work is to turn out well. It will not do, for example, to put varnish on damp wood or even to apply it in a room where the air is excessively damp. We want moderately cool, dry air and clean dry materials before we start, and then there should be no hurry after the work has begun. Leave time for the successive coatings to harden—a day's delay to make sure of this may return large profits to you in a good and durable job.

Don't begin your fine varnish floor finishing with a cheap undercoating. Shellac is a very valuable material for certain

finishes on wood trim and furniture, but it wears out quickly on the floor. Build up your floor varnish with two, or much better, three coats of the best varnish you can get. Don't let the varnish chill—keep it out of drafts—make a mighty effort to keep down the dust.

We have not said much about the workman—the painter. He is as necessary an element in this part of the work as he has been all through building operations. It is easy to distinguish between a good job and one that is poorly done. There are ways in which workmen can slight this part of the work as there are in everything else through the building. Your guarantee of satisfaction lies largely in having an expert reliable painter do the work.

There are plenty of painters who take a pride in doing good work—men who would rather not do your work at all than to do a poor job.

Let me once more stress the "first axiom" of substantial building. I have told it to you already many times. It is this: "Good workmanship and good materials combined are necessary for first class building."—*The Small Home*.

#### WHY CHIMNEYS LEAN EASTWARD

Brick chimneys usually lean toward the east. The following theory has been offered in explanation: At night moisture accumulates in the chimney, and during the forenoon the side toward the sun dries out more rapidly than the opposite side, causing shrinkage of the brickwork on the eastern side very much as a board warps when unequally wet on opposite sides.

Alternate heating and cooling causes progressive expansion of cast iron and of some other materials. Progressive expansion of stone slabs has been found in certain graveyards. The southern and eastern faces of gravestones are often more readily disintegrated than the northern and western faces, due apparently to a greater degree of progressive expansion on the sides most exposed to the sun. If the western side of masonry is thus expanded permanently more than the eastern side, the masonry will lean toward the east.

The Egyptian obelisk in Central Park, N. Y. City, if of granite that is not porous, yet the hieroglyphics on its southern and western faces are more badly disintegrated than on its northern and eastern faces. This is explained by the progressive expansion theory, but is not explained by the moisture penetration theory.

Asphalt pavement that has little or no traffic becomes porous through progressive expansion, and it also shows a tendency to creep down steep hills.

## As The Editor Sees It

### TUSSELL ON IMMIGRATION IS RAPIDLY APPROACHING

*Individual Contractors In Position To  
Aid Industry By Immediate Action*

Immigration is to be a subject of highest interest when Congress convenes. Legislation must be enacted to replace the present law, which dies next year.

Already many organizations are well advanced in the preparation of their arguments to be presented to the lawmakers in the interests of industrial, labor and independent groups. The country is being combed for data for use in bolstering the views and opinions of the various groups that are vitally interested in the form of the next immigration law.

The construction industry, through the Associated General Contractors of America, is joining in this general move for the gathering of information. This industry, because of the increasing number of native-born men who seek "white collar" jobs, is sadly in need of an adequate supply of labor. Under present conditions, which are rendered acute during periods of peak operation, contractors are forced to bid against each other for labor in many instances. Wages thus are forced to an unnatural level and unhealthy industrial conditions result. The increased costs are passed along and eventually prevent necessary building operations from being undertaken.

The construction industry is not ask-

ing that a mass of alien non-producers be permitted to enter the country. But it does feel that its interests are not at variance with those of the country at large when it expresses its desire for legislation that will permit real man-energy to be brought into an industry that essentially is a producer.

Those who are advocating legislation of an extreme type under which the country's doors would be closed so that comparatively few men might bring a desire to work and produce to this country must be acquainted with the construction industry's views. This applies with added importance to the nation's lawmakers.

It must be shown that the construction industry is thoroughly in sympathy with the plan of the House immigration committee to swing the basis of establishing quotas from the 1910 census to the 1890 census in order to secure a higher grade of immigrants. But it also must be shown that the construction industry, representing the marrow of the country's industry as a whole, must not be forced to operate unnaturally because native-born men would rather sit at desks than be artisans.

Members of the A. G. C. must work as individuals to aid the national organization in presenting these facts. They can find a real opportunity while their members of Congress are in their native states to emphasize these facts in the

minds that make the laws. Also, individual contractors can give vital aid to the industry by acquainting Washington headquarters, through answers to the recent questionnaire or independently of their particular problems connected with the supply and demand of labor.

Much information is available to prove in the case of an independent contractor that he is feeling the effect of a lack of balance between supply and demand of labor, and showing how additional costs resulting from lack of this balance causes increased building costs and thus holds back industrial expansion and general prosperity. Contractors should favor the Washington headquarters with this type of information at the earliest convenience.

### THE LATEST ARRIVALS

Immigration statistics recently made public by the Department of Labor present interesting facts concerning the number of aliens entering the country who may be considered as potential additions to the ranks of labor in the construction industry.

The figures show a total of 522,919 immigrants were admitted to this country during the last fiscal year, in contrast with 71,450 aliens who emigrated from the United States during the same period. Of the immigrants, 307,522 were men.

A list of occupations of the immigrants

**BLUE  
PRINTS**

include the following totals: carpenters and joiners, 12,305; iron and steel workers, 4,076; painters and glaziers, 2,550; plumbers, 1,197; metal workers, 764; masons, 3,276; stone cutters, 521; tinners, 512; mechanics, 4,644; blacksmiths, 2,296 and laborers, 83,552.

More carpenters and joiners came into the country than men following any other single line of skilled work, the next closest total being that of 5,559 tailors.

The Annual Meeting of the Philadelphia Builders' Exchange and Employers' Association will be held Tuesday, September 18th, at 2.00 P. M., at the Exchange offices, 1716 Arch Street, for the election of Officers and Directors for the ensuing year, and for the transaction of such other business as may properly come before the organization at that time.

In accord with the provision of the By-Laws as provided in Article XIII, Section 1, the Nominating Committee duly appointed, has placed in nomination the following officers and directors for their respective terms, to be voted for at the above meeting:

President, Amos Y. Leshner; First Vice President, William M. Anderson; Second Vice President, Horace H. Burrell; Third Vice President, H. G. Kepler; Treasurer, C. Albert Kuehnle; Directors, D. F. Durkin, Jr., Thomas Gassner, Robert D. Hamilton, John P. Holleran, Edward Lupton, John S. McQuade, E. B. Newcomer, Joseph M. Steele.

#### FEDERAL REPORT ON CONSTRUCTION

The Industrial Employment Information Bulletin, issued by the Department of Labor, gives an analysis based on information gathered by special agents in sixty-five industrial centers, outlining the trend of employment in various industries, including specific data on construction.

These reports indicate continued activity in construction and a near-peak demand for building tradesmen.

Summaries of conditions in the various states as reported by the agents of the Department of Labor, follow:

##### *New England District*

Maine: Building trades active, employing majority of tradesmen.

New Hampshire: Building operations employ many hands, inadequate housing throughout the state.

Vermont: Extensive building and road construction provides work for a large number of men; pronounced shortage of houses.

Massachusetts: Large building operations under way keep all available tradesmen employed; general house shortage.

Rhode Island: Building operations active, employing all available local tradesmen.

Connecticut: Building trades active.

##### *Middle Atlantic District*

New York: Building activities progressing at record pace with shortage of labor felt generally; public improvements and highway repairs absorbing available supply of semi-skilled and common labor.

New York City: Slightly better supply of common labor is available with fewer demands from building and construction work.

New Jersey: Building industry employing full quota of workers.

Pennsylvania: Huge volume of building operations going ahead in every section of the state, combined with state and county roadwork, continue to provide employment to all available skilled and unskilled building labor.

##### *East North Central District*

Illinois: Some let up in building activities.

Indiana: Some curtailment: Revival of building activity after June let-down noted, as labor shortage has been relieved to extent that contracts are safer.

Michigan: Considerable road building, but contractors do not seem to have trouble procuring labor.

Wisconsin: Considerable road work now in progress.

Ohio: Building industry only instance where labor supply fails to equal demand.

##### *West North Central District*

Minnesota: Three and one-half million dollars being spent by state for road maintenance.

Missouri: Let down in building employment.

Iowa: Slackening seen in building construction.

Kansas: Forty-seven counties doing Federal aid work with 200 miles of highways under construction.

South Dakota: Road construction greatly exceed records of former years, and building operations keep mechanics well employed.

North Dakota: Building operations have slowed down and little state road work under way.

Nebraska: A million dollars' worth of state road construction makes heavy common labor demand, with building operations continuing active.

##### *South Atlantic District*

Delaware: Very little unemployment.

Maryland: Common labor surpluses sent to bridge and railway construction in adjacent states, while large number find employment on various road building projects in Maryland.

Washington: District of Columbia: Building construction continued on a

Cut stone, matching present roof, carpentry and mill work, painting. Contract awarded H. H. Burrell, 206 South Quince street, Philadelphia.

## Pennsylvania Contracts Awarded

**School Building**, Rosemont, Pa. Architect, F. Ferdinand Durang, 1220 Locust street, Philadelphia. Owners, St. Thomas' Roman Catholic Church of Villa Nova, Rosemont, Pa. Stone, granite, terra cotta, steel, 2 stories, 90x61 feet, slag roof, maple floors, metal lath, tile and terrazzo work, bond, terra cotta. Contract awarded to M. L. Coneen & Son, Fifty-fourth and Woodland avenue, Philadelphia.

**Machine Shop**, Lancaster, Pa. Architect, William P. Erisman, Woolworth Building, Lancaster, Pa. Owners, Barry & Zecher Co., Lancaster, Pa. Cinder block, 1 story, 100x34 feet, composition roof, concrete floors, electric light, rolled steel sash, fire doors. Contract awarded to Herman Wohlsen, Lancaster, Pa.

**Residences (3)**, Merion, Pa., total \$50,000. Architect, J. W. Thompson, 703 South Sixtieth street, Philadelphia. Owner, William E. Hexamer, 932 Chestnut street, Philadelphia. Stone and stucco and (2) frame and stucco, 2½ stories, 38x26 feet, wing 24x18 feet, shingle roof, hardwood floors, electric light, hot water heat, tile work. Contract awarded Edward H. Smith, Lansdowne, Pa.

**Telephone Building** (alts. and add.), DeKalb and Penn streets, Norristown, Pa. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co. of Pennsylvania, Seventeenth and Parkway, Philadelphia. Brick, cut stone and steel, 3 stories, 120x30 feet, slag roof, cement floors, steam heat, electric light, metal lath, tile and marble, bond. Contract awarded J. N. Gill Const. Co., Otis Building, Philadelphia.

**School** (alts. and add.), Highland Park, Pa. Architect, J. L. Coney, Drexel Building, Philadelphia. Owners, School District of Highland Park, Pa. Contract awarded: Electric work, George Rudolph, Highland Park; heating, Henry Kenecht, Oaklyn, Pa.

## New Jersey Construction News

**Residence**, Trenton, N. J. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owner, Mr. Russa, care of architects. Brick, 2½ stories, 36x24 feet, slate or tile roof, hardwood floors, steam or hot water heat, electric light, tile work. Plans in progress. Will be ready for bids in one week.

**Apartment** (alts. and add.), 113 West State street, Trenton, N. J. Architect, Walter Hankin, 39 E. State street, Trenton, N. J. Owner, F. A. Reddan, care of architect. Brick and stucco, 2½ stories, 15x22 feet, slag roof, pine floors, hot water heat, electric light, hollow tile, metal lath, tile work, hollow metal skylights. Architect taking bids due September 18th.

**Hotel Ocean Sunset**, Sixth avenue and Kingsley street, Asbury Park, N. J. Architects, Warren & Wetmore, 16 East Forty-seventh street, New York. Owners, Berkeley-Carter Hotel Co., Asbury Park, N. J. Brick, east stone, limestone, cut stone, steel, 10 stories, building 131x65 feet, 4 wings, 73x45 feet (plumbing, heating, electric elevators reserved), slag and tile roof, concrete, oak and rubber tile, metal lath, metal weather strip, waterproofing and dampproofing, terra cotta, iron work and stairs, bond, kalamein doors, rolled steel skylights, tile, marble and terrazzo work. Turner Const. Co. taking sub-bids at 1713 Sansom street, Philadelphia, due Sept. 17.

**Women's College**, New Brunswick, N. J. Architects, Department of Institutions and Agencies, Division of Architecture and Construction, Trenton, N. J. Owners, State of New Jersey, care of architects. Brick, steel, concrete, hollow tile, 2 stories and basement, 158x78 feet, slate roof, mastic and hardwood floors, hollow tile, roof ventilators (heating, plumbing and electric work reserved), tile and marble work, rolled steel sash and skylights, iron stairs. Lowest bidder: Charles J.

**Garage,** 2410 Pennsylvania avenue, Wil-

mington, Del. Architects, Brown & White-side, Dupont Building, Wilmington, Del. Owner, R. T. Ellis, 2410 Pennsylvania avenue, Wilmington. Brick, 1 story, 25x25 feet, slate roof, cement floors, hot water heat, electric light. Contract awarded to Charles Forwood, Twenty-first and Boulevard, Wilmington.

## Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., September 5, 1923. Sealed Proposals will be opened in this office at 3 P. M., October 1, 1923, for repairs to roof and so forth at the United States Post Office and Court House at Philadelphia, Pa. Drawings and specifications may be obtained from the Custodian at Philadelphia, Pa., or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from Page 580)

huge scale and creates slight labor shortages.

West Virginia: Practically all skilled labor employed and good balance between supply and demand of common labor, with large building programs and considerable state and municipal construction work.

Virginia: Labor supply generally adequate for various municipal and state projects.

North Carolina: Building programs continue on large scale and road construction draws heavily upon labor sources.

South Carolina: Labor supply and demand well balanced on building operations.

Georgia: Building programs continue to employ available supply of tradesmen.

Florida: Extensive building program.

### East South Central District

Kentucky: Highway construction added to forces during July.

Tennessee: Highway construction survey shows 50 per cent. labor shortage, but situation is being relieved, large building program continues.

Alabama: Building continues heavy with scarcity of some tradesmen.

Mississippi: Road construction hampered by labor shortage.

### West South Central District

Louisiana: Surplus noted among workers on frame buildings, while bricklayers and allied workers are in steady demand.

Oklahoma: Employment shows a downward trend, as regards workers on frame structures, with shortage of bricklayers and associated tradesmen.

Texas: Building construction continues brisk.

### Mountain District

New Mexico: Very large highway program under way, with building program, though not large, continuing active.

Arizona: Building continues active.

Utah: Considerable activity in highway construction and building.

Wyoming: Large construction program in oil field, with building active in larger cities.

Nevada: Employment demands have shown increase.

Idaho: Shortage of building craftsmen in some sections.

Montana: Highway construction is exception to let up in labor demands.

Colorado: Increased building and construction activities.

### Pacific District

California: Building activities have fallen off slightly except in one or two places.

Oregon: Construction retarded, due principally to high costs.

Washington: Building operations continue, with several large projects under way.

Alaska: Construction at standstill as result of costs of materials.

## THE CAUSE OF OUR SHORTAGE OF MEN

Extracts from Address Before New York Building Congress

BY BURT L. FENNER

Member of McKim, Mead and White, Architects

With the employers on the one hand, and labor on the other filling the columns of the press, a smoke screen has been created which seems to me to obliterate a few simple facts. I want to state a few facts as I see them.

The normal growth of the country requires a certain normal growth of buildings. From 1914 to 1918 new construction fell far below normal. Since 1918 the new construction has barely met the needs of normal growth, and the demand of war needs has not yet been met. The

demand today is much more normal and will so continue.

Furthermore, in nearly all the skilled trades the supply of skilled mechanics has actually decreased, until today there are not more than 60 per cent. as many available in many trades as there were ten years ago. There is also a shortage in many lines of building material, due in part to shortage of labor for erection of buildings, for manufacturers won't operate their plants to capacity unless reasonably assured that their products will meet that demand.

The old law of supply and demand is still in force. On the one hand we have an abnormally great demand. On the other hand an abnormally small supply, both of mechanics and materials. The result is inevitable. The highest bidder gets the men and the material, and costs continue to mount.

Now, what is the remedy? Decrease the demand or increase the supply? The former will take place automatically when prices become prohibitive, and of course in any case it is not a remedy. The latter will not take place unless a concerted and continuous effort is made. The supply of materials can be increased with little difficulty, as there is practically adequate plant capacity in all lines, but the supply of skilled mechanics cannot be increased so easily.

Here lies the chief difficulty and it is one which will require years of systematic effort to meet. We shall doubtless continue to receive some few small numbers of skilled mechanics from Europe. Contrary to the general impression, the immigration law has not materially reduced the number of skilled mechanics coming from Europe. For twenty years that has been practically negligible. It follows then that we must depend upon our efforts and educate our own American boys for the skilled trade.

This is the job which the Apprenticeship Commission has undertaken. The Congress began the work by devising a plan of operation and securing its acceptance in principle by the organizations representing the employers and labor.

The necessity of building up the ranks of skilled labor is not controversial. It is admitted by employers and labor alike.

The statement may surprise you, but some of you may be under the impression that organized labor has by arbitrary measures made it impossible to employ apprentices. I want to correct that impression, if it exists, by stating that while it is true that generally the unions set a limit to the number of apprentices who may be employed, in not one of the more than thirty unions employed in the building industry are the employers using anywhere near the number of apprentices allowed by the union rules.

The Commission holds that a thorough

and well-rounded course of training requires a period of four years; that the bulk of the training should be given in the shop or on the job; but that, along with learning HOW on the job, the boy should attend school to learn WHY.

From the outset we have met with the most enthusiastic support and co-operation from the Board of Education. Well-equipped class-rooms and teachers have been supplied. Courses of study have been prepared by us and been adopted. Ample funds have been provided. In short, the school authorities have met our efforts in the heartiest spirit of co-operation.

These major questions presented themselves in the first year: First, would the industry give to the question the necessary financial support? That question has been definitely and positively answered in the affirmative, both by employers and labor.

Second, could American boys, who seem to have a preference for the so-called white-collar jobs be induced to join the ranks of skilled artisans? We have no positive evidence, or positive proof at least, on that question, but up to the present time there never has been a moment when we have not had more applications for positions as apprentices than we could fill. I am satisfied we need look for no serious difficulty in that direction in the future.

Third, would employers of labor who had already endorsed our plan in principle join together to put it into operation? In approximately one-fourth of the trades, that has been actually accomplished, and some six or seven hundred boys have been enrolled and are at work in the shops and at the schools.

It is the employers who will benefit most by an adequate supply of labor, and yet only a small minority are able to see that apprentices, though perhaps a liability for the first few weeks of their training, become a rapidly increasing asset and benefit from that time on.

The Commission would have no difficulty in interesting you if the work concerned itself only with the building trade. It is only because the industry concerns the whole country that our problem becomes one of public importance which justified us in intruding upon your time.

The building industry is sick. One of the sorest spots is the shortage of skilled labor. A practical cure is available. The patient must be made to take the cure. The public generally should insist upon it, for the business health and prosperity of the country cannot but be adversely affected by the sickness of so important and vital a part of its body.

And there is another aspect of our work. We are bringing up boys to better citizenship. The seeds of radicalism and discontent can find no congenial soil

among the ranks of prosperous, self respecting, highly-skilled craftsmen. On this ground alone, our work deserves the support of yourself and of the public generally.

#### NEW STANDARDIZATION PHASE *Movement Reaches Point Where Contractors' Aid is Vital Factor*

Adoption of standards for concrete mixers and wheelbarrows, accomplished with a directness of action rarely excelled in the field of standardization, now looks toward fullest co-operation by contractors for realization of its maximum benefits. Approval of these standards means much to the construction industry, but this is only one phase of the several that must be linked together to bring the ultimate aims of the program into effect.

Contractors now must carry out the second phase of the program by choosing their equipment to give fullest effectiveness to the standards recently placed in force.

Manufacturers are given until 1925 to dispose of the non-standard equipment they now have in stock. The swinging of standard equipment into general use will have been accomplished long before the end of the coming year, however, since this wide leeway was given the manufacturers to assure fairness to them, not being designed to indicate the length of time which would elapse before the standardization would be completed in effect as well as in word.

Equipment of the accepted standards of type will carry plates showing authorization by the Associated General Contractors, and eventually none but mixers and wheelbarrows of this type will be available upon the market, according to the program of the joint committee on equipment standards. The oft-repeated statements of benefits derived from standardization then will apply fully to this branch of industry.

Until such time, however, as the stocks of the manufacturers will be cleared of equipment that does not comply with the approved standards, it will be necessary for contractors to weave in use of standard and non-standard types.

Plates to be placed upon equipment conforming to standards soon will be available to the manufacturers and will make their appearance on the market on mixers and wheelbarrows that will be sold alongside of non-standard types until the manufacturers have cleared their stocks of all but the standardized products.

Contractors are fully warranted to anticipate the adopted standards to reflect themselves in equipment prices, since the overhead of manufacturing a number of unnecessary types will be eliminated at the earliest possible time. As previously

pointed out, however, the contractors must co-operate closely if the desired results are to be obtained in their entirety.

We note in a recent issue of the BUILDER'S GUIDE, a writer in the Washington State Architect quoted as saying stucco should be painted.

Every time we open our mouths to say "it can't be done," we reflect on Montaigne's warning to "the young man" not to be hasty in believing a thing can not be done because one has not seen it done. There are, indeed, "many strange things in this world."

However, the general belief is that paint can not be made to adhere permanently to concrete or mortars. The tests of the United States Bureau of Standards would seem to confirm this belief.

The Washington man speaks casually of the operation; ignoring the widespread ignorance of any pigment that can be employed with proper results. He should assuredly elaborate his theme and give directions for the obtaining of the correct material.

Whereas, this writer asks for our credulity in the matter of paints, he is evidently not open to conviction himself on the question of obtaining a stucco without mass cracks.

A Portland cement stucco can be obtained with a 1-3 mix that will not have any mass cracks. A solid stucco mass that is properly worked and applied will not allow of the entrance of water in the mass and will therefore be free of frost cracks.

We will be glad to conduct this western writer around anytime he is east and show him some stucco jobs that are free of these defects.

WILLIAM C. KOBER, *Secretary*,  
Adensite Company, Inc.

## FLOOR LOADS FOR OFFICE BUILDINGS

Earnest consideration of the question of the proper magnitude of live loads for office building floors is being given by the Building Code Committee of the United States Department of Commerce, and facts of great importance to the structural engineer are being disclosed. Observations which have formed the basis of present specifications are being supplemented by careful studies of floor live loads of numbers of buildings in the United States.

Up till the present the most important series of floor live load studies ever conducted was that of Blackall and Everett, carried out in Boston, thirty years ago. According to their observations, which

were made on the floors of three large office buildings in Boston, the highest live load found in any one office amounted to 40.2 lbs. per square foot. The average of the ten heaviest loadings in each of the three buildings amounted to only 25.9, 29.8 and 29.0 lbs. per square foot. This directed in a striking manner attention to the remarkable lightness of usual maximum loads on office building floors, and one of the incidental facts established was that a very considerable reduction of live load in the design of columns might be made. This arose from the fact that the greatest maximum average for all floors of any one of the buildings investigated was 17 lbs. per square foot, or 42 per cent. of the maximum observed floor load on any one floor. Hence it has followed that most structural engineers are prepared to design the lower tiers of columns for a tall building for a live load not over 50 per cent. of the maximum possible live load on all floors above.

The most important of the recent investigations made by the Building Code Committee is that on the Equitable Building, New York City, regarded as probably the largest office building in the world. As reported by *Engineering News-Record*, the maximum loads observed varied from 30.7 to 78.3 lbs. per square foot, although in the latter case, if certain book shelves had been filled, the loading would have amounted for the room in question to 87 lbs. per square foot. The latter load occurred in a room which was selected as one of specially heavy occupancy, being devoted to the housing of a large law library. The above figures relate of course, particularly to the problem of floor design. So far as column design is concerned, the figure to be noted is about 11.6 lbs. per sq. ft., which represents the average live loads on the three floors particularly chosen for study. Excluding offices given over to a specially heavy occupancy, the maximum floor load observed was 55.4 lbs. per square foot, and comparing the average load on the three floors with this, it is seen that it is scarcely more than 20 per cent. of the maximum. In this we have additional ground for liberal reduction of column live loads.

Another investigation undertaken by the committee was on the building of the Union Central Life Insurance Co., Cincinnati. Several large sections of different stories of this building devoted to clerical and filing purposes were studied. The average weight of furniture for these sections was 7.4 lbs. per square foot, and if to this be added the weight of employees not exceeding 1.8 lbs. per square foot, it is seen that the average loading is not above 9.2 lbs. per square foot, although the office floors were designed for 50 lbs. per square foot.—*Architect and Engineer*.

## SIMILARITY OF DEFECTS IN LUMBER

No kind of tree produces lumber that is entirely free from defects and blemishes. The same irregularities in the wood, natural and accidental, are likely to occur in all species; and in all woods used for the same purpose the effect of a certain defect on the strength and quality is about the same.

Knots are probably the most common of the natural defects in lumber. Most branches of forest grown trees originate at the center of the trunk and grow in diameter and length so long as conditions are favorable. The branch end or knot in the trunk is therefore typically shaped like a cone with its apex at the pith. A branch end when sawed through appears on a flat grain surface as a round knot and in vertical-grain material as a spike knot. Many of the lower branches in forest-grown trees die and fall off when the upper branches cut off too much of their light. As the tree continues its diameter growth, new wood surrounds the stubs of the branches. When the log is cut up these covered stubs are found in the lumber as encased knots.

All trees do not have pitch streaks or pitch pockets, but such blemishes are found in the majority of softwoods. The amount of pitch often varies as much within a species as it does between species. A typical pitch pocket in southern yellow pine may be shorter and wider than one in Douglas fir, but if they are equal in area they are practically equivalent in damaging effect.

The same kind of blemish-producing accidents happen to all kinds of wood. Holes produced by loose knots falling out, by grubs, insects, and birds, and by tools appear in all kinds of lumber. Fire scars are found in all species of trees.

All woods are more or less subject to the attack of some decay-producing fungi which work in the sapwood or in the heartwood. Checks, cracks, splits, case-hardening, honeycombing, warping, and other seasoning defects are likely to be found in any kind of wood. Manufacturing defects, such as planer skips—the result of cup, bow, crook, and twist—may occur in all species. All lumber may have cross grain, shake, and stain.

Certain defects may be more prominent in one wood than in another, but there are more points of similarity than dissimilarity in the defects present in different species. The U. S. Forest Products Laboratory, Madison, Wisconsin, has made use of this fact in the drawing up of standardized grading rules for the grading and selection of softwood lumber. These rules recognize certain defects as the equivalent of others and limit the size and number of defects permissible in each grade. They are applicable to all softwoods and might be extended to cover many hardwoods.

## CONSTRUCTIONAL

By a Practical Construction  
Superintendent

*Leaks*

One of the most common leaks, we note, in our ups and downs of the Construction Field, is the handling of materials, mixing and placing of concrete.

A cheap inefficient superintendent or foreman in charge of such work can readily lose 100 times the difference necessary to have a first class efficient man, on the job, who takes pride in his work.

For instance, you are pouring a 1-2-4 mixture of concrete. The foreman has failed to measure or have his men measure, with a unit such as a cement sack, the quantities of sand and gravel or trap rock, so that proper proportions will be obtained. He has failed to mark the wheelbarrows with a line of paint or chalk around the inside of the body, so that every barrow will be loaded as far as practical with the proper amount.

The mixer starts and charging commences. The men, as the day progresses, become tired or a laggard is in the gang and misses three or four shovelful of gravel on each barrow he loads. Will your cement estimate hold out? Let us say three shovels of gravel are lacking on each barrow, as an average. This makes six to a batch or the equal of one-half a cement bag. You are therefore getting a 1-2-3-½ mixture.

Let us go a little further into this shortage and see the result.

1 batch 4 bags of gravel equals 48 shovelful. Each batch short of gravel equals 6 shovelful, or 12½%. 4¾ cubic feet equal a batch.

6.35 full batches, therefore, bags of cement to a yard, but with each batch short 12½% of the aggregate, it will take proportionately more cement or 7.26 bags to a yard, which is a loss of .91 of a bag per yard.

On a 100 cubic yard basis, the shortage of gravel will cause an additional consumption of 91 bags of cement, or 22¾ barrels at a price, we will say, of \$2.80 per barrel or a financial loss of \$63.70 for excess cement used, so you may add 63.7 cents to the cost per yard, you estimated for short measurement in practical work.

The cost of measuring and marking wheelbarrows should not be more than \$1.60, allowing 16 men to the gang at 50 cents per hour per man, and this allows 10 minutes, which is excessive for a trained gang, to fill and empty six bags and mark the barrows. One proper marking per day should suffice.

We have seen freshly mixed concrete spilled along the wheelbarrows' runs due to poor wheelbarrows, with wabbly

wheels, bent bodies, loose handles and so on; poor runways; careless dumping into forms and leaky forms; also along chute lines due to careless arrangement of chutes, and concrete running over forms. This is not in large quantities in any individual case, and is gradually worked away from the job with other dirt, so that no great quantity of mixed concrete so wasted is apparent in one great bulk, but the waste exists in unbelievable quantities and contains not only cement but all the other aggregates.

The preparation for handling concrete materials, such as temporary platforms or bins of rough lumber, and dry storage for cement mean economy on any job, to the contractor, just as much in proportions to quantities used as the protection of valuable ores and metals to the refiner.

The careful setting of concrete mixer, runways, towers, and chutes are very important, as men take pride in an efficient plant, and produce accordingly with a well-planned and carefully placed plant.

We have seen 4 barrows of gravel, 2 of sand with the men sitting on the handles, WAITING, 2 more barrows in the gravel pile and one in the sand pile loading and another set waiting to be loaded. While the loading was being done by the men placed in the respective piles for this purpose, the wheelers loafed idly by. At the machine we found a machine runner, cement tender and man at discharge chute, with a batch in the charging hopper and one in the machine. On the discharge side of the machine we found six wheelers with a long wheel to the form. We have also seen a similar charging gang on a short wheel to the mixer with a ½ yard tower bucket taking material away. You can find this condition as well as an opposite condition, of small charging gangs and greater capacity for taking the mixed concrete away.

You have no doubt noticed an idle concrete gang and an idle mixer due to some minor breakdown, and one man who in all likelihood is a fairly high priced mechanic chipping at hard cement so he can get to the damaged member. The cutting of the caked material cost more than the actual repairs in time. One man with a hose and broom, at the end of each run, with a little water will remove the material while still soft in ½ to 1 hour time, and this will give him time to oil or grease necessary bearings. Put the cost of this man with a liberal use of oil and water against a possible gang of 16 men at 50 cents per hour idle for 10 minutes. Even the oil will pay for itself in eliminating shutdowns.

On a job of any size there is usually a handy repair man, with a fair knowl-

edge of gasoline engines. If this mechanic would spend a few minutes, after each run of the machine, in examining the adjustments of the engine, trouble may be averted the next day in starting. Possibly the morning would be the time at least ½ hour before mixers start to make this examination, as a cold engine gives most trouble. Another thing that both the foreman and mechanic should do, is have spare parts for both machines and engines on hand or know where to get them quickly, as no machine is beyond breaking a part once in a while.

*Don't you think—*

It is more easy to start a job, when in doubt, with a small organization and build up to the required number of men, than it is to find it necessary, in your judgment, to remove surplus men after the work is started?

Additional men added to a gang makes every man your friend, while taking men away from a gang causes dissension, even though your judgment is absolutely correct?

A periodical efficiency examination of a job, by a practical superintendent would tend to reduce cost and increase the efficiency of the work?

A practical school for executives and foremen for construction work would be as desirable as one for draughtsmen and engineers? Plasterers and Bricklayers?

Periodical talks to the Superintendents and Foremen by the Contractors and the General Superintendents, or other practical men, with interest in the work, would be very helpful on any job?

Job meetings of the field superintendents and foremen every second or third day would be helpful?

The placing, of a few trade periodicals, covering the subject "construction," on the job would be helpful?

Overhanging cornices and projections should be eliminated from our modern type office, business and apartment buildings in the interest of safety?

12 inch rough common pine boards are more economical for concrete forms for rough walls, than dressed lumber or roofers?

A ground supported ready built and bolted bricklayers' scaffold, that could be moved from one job to another, a better practice than building a pole and ledger scaffold as now in general practice?

**Don't be a Rip Van Winkle. Advertise and let everybody know you are awake and abreast of the times.**

## As The Editor Sees It

### PRACTICAL ACCIDENT PREVEN- TION WORK AS CARRIED ON BY POST AND McCORD

B. W. DELANEY, *Claim Agent, Post and  
McCord, Inc., New York City*

The only practical way, known to Post and McCord, to prevent accidents in the construction field is as old as antiquity and at the same time seems to hold good against any other form of safety as yet introduced. It is embodied in two divisions:

The exercise of eternal vigilance, or personal surveillance; and the use of the best equipment procurable.

It has been the experience of Post and McCord during the past ten years, in which the firm has carried its own insurance, that over ninety-five per cent. of the accidents occurring among employees working on the many steel structures erected during that period have been due to the carelessness of the injured or to that of his fellow workmen. This in itself emphasizes the necessity of constant watchfulness on the part of both employee and employer, and is supplemented by the fact that many of the most serious accidents which occurred during the period mentioned were due to the momentary carelessness of expert workers; men who had had years of experience in their trade and who were well known as the most careful and competent in their particular line. Hence it is considered necessary to

keep in constant and intimate touch with the men in the field.

This program is personally conducted by the Vice President, Mr. Frank B. McCord and by the Superintendent of Erection, Mr. William H. McCord, through direct contact with superintendents, foremen, sub-foremen, time-keepers, gang bosses, etc., on the various jobs. Every job is visited daily by either of the above men who carefully inspect and analyze, with the superintendent and his assistants, each operation and problem involved in the progress of the work, and so become acquainted with all the men and all conditions. Suggestions and criticisms are invited; infractions of rules detected; penalties inflicted; dangerous practices eliminated; and, in a word, the whole organization kept on its toes both for efficiency in production and prevention of accident. This, the firm believes, makes every man a separate unit of safety. Of course, this system of supervision is supplemented by various efforts to get the men to think safely, but when it comes to influencing the human element the principal dependency is on the verbal contact established between employer and employee in the way above mentioned.

#### *Provide Best Equipment*

In the matter of equipment, it has always been the endeavor of Post and McCord to provide the best and most modern machinery and tools obtainable for construction work. In fact, I think

it may be said without fear of contradiction that the erection plant of Post and McCord is the most complete outfit of its kind in the territory of New York City. This does not merely mean that the plant is large and capable of handling big work, but rather that every tool and piece of machinery, from the drift pin to the fifty-ton derrick, was selected with the predominating thought of Safety First.

I believe it is also a matter of history that Post and McCord were the first contractors in New York City to use steam hoisting engines and compressors in the erection of steelwork, and were likewise the first to abandon steam when electricity had been proved a more desirable power for hoisting and air compression. The substitution of steel for wooden derricks was another forward step in which the firm was a pioneer. As a safety factor, however, I think the company's greatest achievement was through the introduction of wire rope slings for hoisting. For many years prior to 1912 the most serious accidents encountered were caused by the breaking of chains used in hoisting. Despite the closest inspection and most rigid care a chain would frequently break with disastrous results. Therefore, a substitute for chains was often the subject of grave discussion among various engineers and members of the firm. Through these discussions the matter was finally brought to the

**DRAWING

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

attention of the John A. Roebling's Sons Company, the firm which, after exhaustive experimental work, developed the present day wire rope sling and enabled Post and McCord to be the first in New York to use this valuable factor of safety.

In this respect the firm makes no claim to altruistic motives, simply considering a wide margin of safety the best of insurance protection, a plain duty to the public in general and especially to the employees who have to entrust their lives to the proper performance of the equipment furnished.

Merely purchasing good equipment and putting it on the job does not mean efficiency or accident prevention. The first cost of the average tool or machine used for structural steel erection work is soon lost sight of in the items of upkeep and repairs. Therefore, eternal vigilance is almost as necessary in the inspection and care of the equipment as it is among the men.

At the storeroom of the Company in Brooklyn a complete repair department is maintained. This outfit is in charge of men expert in repairing and overhauling the special machinery, tools and rigging used in erection work. These men are held responsible for the condition of all equipment sent to the various jobs and are therefore careful to have everything in good and safe working order before sending it out.

#### *Co-operation Needed For Education of Employees*

As intimated in a previous paragraph, the firm has never actively pursued a scientifically organized program of safety work among the ironworkers. This is largely due to the fact that in the erection field the average job lasts less than six months or a year, and employees are constantly changing from one employer to another. Consequently, about the time one would have a safety movement ready to function the job would be finished, and on the next job he would have to start all over again with a new group of men. Therefore, it is the opinion of the firm that in order to make the theoretical feature of "safety-first" a success among the rank and file of the men, movement would have to be made through a general headquarters composed of all employers within a certain district, and also through the headquarters of the various unions and organizations of the employees. In this way the message coming from an authoritative source, would reach all trades and cover all conditions involved.

Would not this work of "organizing the organizers" be a task well worth the attention of such a master Safety Force as the National Safety Council? I have read with marked attention of the wonderful success you have had in establishing the safety movement in various in-

dustries throughout the country, and hope that your Structural Department will in the near future be sufficiently strong to have so thoroughly imbued all the building trades, employers and employees, with the spirit of Safety First, so that evidence of a careless accident can only be found in records of the past.

*National Safety Council.*

#### BUILDING CODE

In accordance with the action of the Building Code Committee of the Pennsylvania Department of Labor and Industry at the June 21, 1923, meeting, the Department is endeavoring to expedite the formation of a Building Code to the fullest extent. Copies of the Lower Merion Building Code have been forwarded to the Committee for the purpose of examination. The Harrisburg and U. S. Department of Commerce Codes will also be sent as soon as received by this Department. The comment and criticism received from the Committee will then be compiled and a code framed for submission to the third class cities and boroughs, accompanied by a recommendation for adoption. It is the aim of the Department, as well as the Committee, to induce every third class city and borough in the State to adopt and enforce as nearly a uniform building code as possible. It is believed that the Code now contemplated will accomplish this purpose if adopted by all cities and boroughs below the second class, with only such variations and modifications as are rendered necessary by existing local conditions.

The Department originally contemplated drafting a code to be enforced under the supervision of the Department of Labor and Industry, but it has now concluded that a better element of success in securing safe buildings presents itself if municipalities will agree to the plan herein outlined.

The revised Industrial Lighting Code of the Department of Labor and Industry of Pennsylvania is now ready for distribution.

The revised Code was adopted May 10, 1923, and is now effective in all of Pennsylvania's industrial establishments. It contains rules on Glare-Shading of Lamps, Distribution of Light, Emergency Lighting, Intensity of Illumination and Dust and Gas Accumulations. The Intensity of Illumination rule contains two tables for use in determining the illumination necessary in various types of industry.

Those interested in this code may obtain copies of it by writing Mr. Cyril Ainsworth, Acting Secretary of the Industrial Board, Keystone Building, Harrisburg, Pennsylvania.

## New Jersey Contracts Awarded

**Bank and Office Building**, Eighth and Asbury avenue, Ocean City, N. J. Architects, Paul A. Davis, 3rd, & Dunlap, 1713 Sansom street, Philadelphia. Owners, Ocean City Title & Trust Co., Ocean City, N. J. Reinforced concrete, limestone, brick, granite, fireproof, cut stone, 6 stories, 62x96 feet, slag roof, reinforced concrete floors, hollow tile, roof ventilators, waterproofing and dampproofing, iron stairs, tin clad and kalamein doors, rolled steel sash and skylights (tile, marble, elevators, electric, heating, plumbing and all interior finish reserved). Contract awarded to J. S. Rogers Co., Drexel Building, Philadelphia.

## Miscellaneous Construction News

**Hospital Building**, Maggie, West Virginia. Architects, Paul A. Davis, 3rd, & Dunlap, 1713 Sansom street, Philadelphia. Owners, Colored Insane Hospital, Maggie, W. Va. Brick and reinforced concrete. Owners taking bids due November 1st.

At the last meeting of the Executive Committee of the American Construction Council, President Franklin D. Roosevelt, through the Committee, announced the creation of additional executive positions to expedite the administration of the expanding activities of the Council. Mr. D. Knickerbacker Boyd, President of the Philadelphia Building Congress, was named Executive Vice-President of the Council and at the same time Dwight L. Hoopingarner, formerly Executive Manager of the Cleveland Building Trades Employers' Association, was appointed the Council's Executive Secretary. Joseph H. Alexander, Vice-President of the Cleveland Railway Company and John E. Lloyd, President of the Wm. M. Lloyd Company of Philadelphia, have accepted vice-presidencies

in the Council. The foregoing are in addition to the Council's previously existing officers.

Announcement of important new committees will be made shortly.

The efforts of the Council are being intensively directed first on several of the most urgent problems confronting the construction industry, such as promotion of and co-operation with local building congresses, a national survey of apprenticeship needs and conditions of labor supply, promotion of the stability of employment and reduction of unemployment, comprehensive steps toward the determination of the causes and the elimination of waste in all its phases throughout the industry, a general educational program as to the problems of the industry and its development, and the promotion of the concept of construction activities as a great American industry.

Activities being carried on in these fields by other agencies will receive proper recognition by the Council at all times, and co-operation with the appropriate existing agencies will be established.

The Council recently moved into new quarters in the National Association Building, 28 West 44th Street, New York City.

A guide book designed for the prospective small home owner was issued recently by the United States Government, the Department of Commerce announcing the publication of a handbook setting forth details which assert the steps necessary to acquiring such property.

This aid to home builders is a publication entitled, "How to Own Your Home." It carries a foreword by Herbert Hoover, Secretary of Commerce, and was compiled by John M. Gries and James S. Taylor, of the Division of Building and Housing, in answer to the request of a large number of national civic organizations that the subject should be authoritatively covered to encourage home owning in the interest of good citizenship. The booklet, planned to give simple, common-sense information to the person of moderate means who would possess a home, is the result of collaboration and approval by more than fifty civic bodies and experts interested in developing a sound social and economic system through the home.

In declaring that the public recognizes the advantage of owning their own homes and that business groups, especially, are viewing this proposition in a new light, Secretary Hoover said in the foreword:

"They see that taking a neighborly interest in developing sound financing and other machinery for the use of home seekers and insisting on the observance of honest, straight-forward business meth-

ods by those who deal with home seekers is not paternalism but good business and good citizenship. It is the 'square deal'—and it is not only right but essential that the cards should not be stacked against the home seeker."

Maintaining a high percentage of individual home owners is one of the searching tests that now challenge the people of the United States," Secretary Hoover asserted in urging "the own-your-home" idea. "The present large proportion of families that own their homes is both the foundation of a sound economic and social system and a guarantee that our society will continue to develop rationally as changing conditions demand."

"Buying or building a home requires the use of sound judgment in seeing that the personal needs of the family are best met with the funds available," Mr. Hoover pointed out in the foreword. "It involves not only the carrying on of transactions of financing and buying or building but it involves the proper determination of location with respect to school, to work, and to neighborhood."

Secretary Hoover stated that the development of the automobile has given "a great impulse to suburban life and an increasing possibility of home ownership."

"A family that owns its own home takes pride in it, maintains it better, gets more pleasure out of it, and has a more wholesome, healthful, and happier atmosphere in which to bring up children. The home owner has a constructive aim in life. He works harder outside his home, he spends his leisure hours more profitably, and he and his family live a finer life and enjoy more of the comforts and cultivating influences of our modern civilization. A husband and wife who own their own home are more apt to save. They have an interest in the advancement of a social system that permits the individual to store up the fruits of his labor. As direct taxpayers they take a more active part in local government. Above all, the love of home is one of the finest instincts and the greatest of inspirations of our people."

Statistics published in the book show the percentage of home owners in the United States, and the revelation made by them also prompted the Department of Commerce to publish such information for public use. In 1900, 461 of every 1,000 families in America owned their own homes, while in 1920 the percentage had dropped to 456 in each 1,000. Of the 48 States only 20 showed an increase, while the District of Columbia likewise gained.

The ten leading States in respect to home ownership in 1920 were, in order, North Dakota, Wisconsin, South Dakota, Idaho, Minnesota, Montana, Utah, Maine, New Mexico and Michigan.

One of the outstanding problems confronting the home seeker, the handbook points out, is that of financing the acquisition of property.

"The prospective home owner who uses his common sense in considering the real needs of his family and his ability to pay, and who checks his own judgment by consulting experienced persons, may go ahead with full confidence," it states. "He need not be frightened by the mistakes of heedless persons who have carried away by some novel feature and coaxed into a bad bargain, or who have tried to buy beyond their means. While some risks are involved, as is usually the case in obtaining anything worth while, the danger of failure is relatively small when weighed against the advantages of an owned home."

What ratio of income may be safely devoted to the process of acquiring a home is explained in this vein: "If a certain family pays one-sixth of its income for rent, it may be able to devote one-fourth or more to buying and maintaining a house, for the amount thus used may include both rent and savings. Rent, or payments on a home, may require anywhere from one-eighth to one-third of the family income, depending on the special circumstances in each case."

Tables dealing with the ratio of income to home investment are given. The tables do not attempt to set up arbitrary standards, although they are stated to be fairly typical and may be used as a basis from which to start figuring.

Under the heading of "The Range of Safe Expenditure," the handbook does not approve of any effort to buy a home beyond a definite ratio to family resources and income, and carefully elaborates these ratios of expenditure in accordance with income.

Particular stress is placed by the handbook on the agreements which should be definitely entered into with regard to financing, building, and purchasing. The points which should be clearly defined are emphasized.

While conceding that the great majority of individuals and companies with which the home seekers deal are honest and wish to do business honorably, the handbook insists that "no good business man should object to having his obligations, as he understands them, set down in writing and in accordance with legal procedure."

As for the financing of home building, the handbook gives sound information.

"Borrowing money to buy a home is no disgrace," it declares. "On the contrary, it is normal and in many ways desirable. Many families in meeting payments on a loan have learned the habit of saving, and have continued it as a step toward financial independence."

It is desirable, the book points out, for a family about to buy a home to possess a minimum of 20 per cent. of the value of the house in cash, even though arrangements are often made for a purchase with a lesser amount. The advantage of a larger cash payment is found in the fact that it helps to insure a loan at a low rate of interest and one that can be paid off comfortably.

In the selection of a home site, requirements are carefully discussed from the standpoint of family life, neighborhood, education, transportation to work and to shopping centers, low or high land values, protection offered to home by private restrictions, zoning, ordinances and city planning, and by fire departments and police. Character of the neighborhood, location with reference to schools and playgrounds for children, and general improvements of the lot, including planting and drainage, are points that are explained as important factors.

The problem of buying the property for the site too long before building in view of the conditions of public utility improvements, such as paving, sewerage, water supply, gas and electricity, possible assessments, the proportion of lot value to the total outlay and without making a proper search of the title, are also given attention in the handbook.

In conclusion the handbook comments

"It is hoped that prospective home owners may find whether they are on a right track by checking their plans with these suggestions and that the home so acquired will cause them no regrets."

"If they insist on good honest standards in the houses they build or buy they not only benefit their families and themselves but perform a broader service. They help raise the quality of homes in the United States and provide a sound basis for wider home ownership."

"How to Own Your Home," may be obtained for 5 cents from the Superintendent of Documents, Government Printing Office, Washington, D. C.

## CONCRETE FLOOR TREATMENTS

The efficiency of a concrete floor surface depends upon the workmanship in laying the wearing course and upon proper protection during its early hardening by a covering which will keep the floor damp for at least two weeks. Experience has demonstrated that a wearing course composed of portland cement and a suitable aggregate correctly proportioned, mixed and deposited and properly protected after finishing will produce a satisfactory wearing surface, free from dusting.

If a wearing surface crumbles or dusts under moderate traffic, the wearing qualities of the floor can often be improved by the application of some hardener or

treatment. Magnesium fluosilicate, sodium silicate, aluminum sulphate, zinc sulphate and various gums, soaps and paraffins are among the best known substances used to treat concrete floors.

#### *Magnesium Fluosilicate Treatment*

The magnesium fluosilicate treatment consists usually in one or more applications of a solution of the silicate. The solution for the first application consists of about one-half pound of the silicate dissolved in one gallon of water. For the second and subsequent applications the solution is made with about two pounds of the silicate to each gallon of water.

Any number of applications of the more concentrated solution may be given to the floor, depending on the condition of the floor and the apparent penetration obtained. In no case should one application follow in less than three-quarters of an hour after the preceding one. The surface treated should be kept wet with the solution for at least three minutes at each application so as to replace any of the solution absorbed at once by the concrete. The primary object of the manner of application is to secure as great a depth of penetration as possible.

#### *Sodium Silicate Treatment*

A 20 per cent. solution of sodium silicate containing a small addition of an organic acid is applied in two or more coats twenty-four hours apart. Ordinarily the sodium silicate requires considerable time to dry properly so that the floor can be used. The sodium silicate treatment is, of course, inexpensive.

Commercial sodium silicate varies in strength from 30 to a 40 per cent. solution. It is quite viscous and requires thinning with water before it will penetrate the floor. Ordinarily it will be found satisfactory to dilute each gallon of the silicate with three gallons of water. Each gallon of the resulting solution will cover about 200 square feet of floor surface one coat. The floor should be thoroughly cleaned of all grease, plaster, dirt, etc., and should be thoroughly dry before the first application of the silicate solution.

#### *Aluminum Sulphate Treatment*

The aluminum sulphate treatment consists in one or more applications of solutions of aluminum sulphate to the clean, dry surface. The solution is made up in a wooden barrel or stoneware vessel and the water should be acidulated with about 2 cc. of commercial sulphuric acid for each gallon of water. The sulphate does not readily dissolve and requires occasional stirring for a few days until the solution is complete. About  $2\frac{1}{2}$  pounds of the powdered sulphate will be required for each gallon of water and one gallon of the solution should cover about 100 square feet of floor surface. For the first treatment the solution may be

diluted with twice its volume of water. Twenty-four hours after this application the normal solution is used and twenty-four hours should elapse between additional applications of the solution.

#### *Zinc Sulphate Treatment*

This treatment consists in the application of about a 16 per cent. solution of zinc sulphate with about  $4\frac{1}{2}$  per cent. free sulphuric acid applied in two coats, the second coat being applied four hours after the first one. The surface should be scrubbed with hot water and mopped dry just before the application of the second coat. This treatment gives the floor a darker appearance than the original concrete.

There are a number of compounds of oils, gums, waxes, etc., which are sold as concrete floor hardeners. Pulverized iron mixed with sal ammoniac or some other oxidizing agent is also used both as an integral floor hardener and as a treatment for a concrete floor surface.

#### *Admixtures*

There are on the market a number of compounds which are widely recommended for inclusion in the body of the concrete. Instructions for the use of these compounds invariably call for many of the methods and practices which are known to be essential for successful concrete floors built without the inclusion of integral compounds. Poor workmanship or improper methods or materials cannot be compensated for by the admixture of any material other than those used in making good concrete.

Admixtures containing chemicals may interfere with the chemical action between the cement and water. Unquestionable evidence should, therefore, be had about the effect on the concrete of any proposed admixture before it is specified for use.

#### *Floor Paints*

Decorative floor paints or coatings may be had in considerable variety from responsible manufacturers. Almost without exception these paints require that the floor be thoroughly clean and dry when the paint is applied. A fairly wide range of colors is available and, while these paints wear off under foot traffic, they are, in general, as permanent and wear resistive as the paints in use on wood floors.—*Concrete Floors.*

## ARCHITECTURAL USES OF WALLPAPER

BY ESTELLE H. RIES

Whether the builder is planning the interior finish of a new house or considers the remodelling of an old one, the architectural uses of wallpaper present interesting possibilities for service.

It is no longer believed necessary or even desirable to have the walls throughout the house alike, even where there are

communicating rooms. While this gives a certain spaciousness and unity to the effect, it is primarily necessary for the wall treatment to conform to the purpose and exposure of the room for which it is intended.

A simple bedroom requires different wall treatment from a formal dining room in which a certain dignity and weight would be wanted. The north room requires warmer tones than does the sunny room on the south side of the house. Or one room may be finished in oak panels while another has white enamel wood finish. It is evident that a different background is desirable in these various circumstances.

While we find that increased space is apparently afforded if communicating rooms are papered alike, this should only be done if they have a similar degree of formality and are subject to the same conditions of exposure and light. But do not assume that we are recommending a patchy, jumpy effect, for while the colors need not be identical, they must be harmonious. Strong contrasts and clashing things must be studiously avoided.

In papering rooms that adjoin, one may use the same color in different texture. Or one may reverse the emphasis, having, say, one room chiefly blue with accents of tan, while the adjoining room is chiefly tan with the accents of blue. Or if one of the colors is not suitable in both rooms, at least the other should be, so that a proper inter-relation is preserved to prevent clashing.

It may be noted here that light colors in the wall paper make a room seem larger and lighter, and give the effect of cheer, daintiness and cleanliness. Used to excess, a sense of barrenness results. Dark colors, on the other hand, decrease the size of the room but produce a certain dignity and richness of effect. If these are used too much without relief, the result is gloomy or dingy, and hard to illuminate.

Even in the selection of the so-called neutral tones, there are differences in tone to prevent monotony or identity in all the rooms. North and east rooms need the warming quality of ivory and yellowish creams; sunny south or west rooms may be grayer and cooler. Oak furniture is better against a wall which has an ivory, not a gray element to supplement the yellow-brown of the oak, while a gray background is somewhat more pleasing for mahogany.

If the ceiling of a small room be low, the use of a wallpaper with simple self-toned stripes will increase its apparent height. If the room be not quite so small, the vertical stripes may have contrasting color which would feel close and oppressive in the very little room.

Small rooms require small patterns, if

any, and the simpler the effect, the better. For larger rooms, larger scale, and bolder color is permissible. When the ceiling is low, the cornice or picture molding should be at the top of the wall where the ceiling actually joins on.

Architectural dignity is achieved by using formal papers in formal rooms. Period wallpapers and other formal types are available, but must be exactly adapted to their surroundings. Just because they are expensive does not make them a satisfactory choice. They would, for example, be too serious for bedrooms where floral or two-toned simple designs are preferable and much less costly.

While Adam paper is suitable for a room of Chippendale, Sheraton, Hepplewhite or other Georgian furniture, it will not go with a room that has casement windows, low beamed ceilings, inglenook and other features of simple country cottages, or with the heavy dark oak aspect of Tudor, Flemish or Jacobean styles.

A wall has an architectural mission to perform—to hold up and support the room. It must look strong enough to do this, and the idea of making it vague and uncertain in its decoration is in opposition to its purpose. No wonder that decorators have reacted enthusiastically to the presentation of papers that emphasize texture instead of pattern. Grasscloths, plasters, leathers, damasks and others in remarkable variety are available. The texture of wallpaper has a good deal to do with its architectural value. Whether it be rough or smooth, fine or coarse, or like the numerous stuffs which it simulates, greatly affects the result, and presents both opportunity and responsibility.

It is well to know what kind of furniture is to be used in the room to be papered, and, of course, if it is a new house, this will be largely determined by the wood trim. Oak is an open grained wood, and both in furniture and paneling is generally carved and heavy. It therefore requires a wall with coarse texture, such as rough plaster finishes, tapestry papers and the like, never a satin striped or other delicate effect.

Where the wood is white, enamel or gray, and mahogany furniture would logically be used the opposite is true. We then have a smooth reflecting surface, and delicacy of texture in the wallpaper is suitable.

Smooth finish is necessary and coarse textures should be debarred for they would overpower the room. The simple bungalow with perhaps its mission or other similar furniture also requires coarse supporting texture in wallpapers. Its almost crude simplicity would make any delicate satiny finish in wall paper a caricature. The straight lines of mission furniture need sturdy background

and this is found in rough plaster, bur-lap, tapestry and the leather effects in wallpaper textures.

When, on the other hand, the ceiling is too high for the width, as is usually the case in the narrow hall, the cornice line should be brought down on the wall. For narrow rooms and halls, tapestry effects with depth and distance may be successfully employed.

Since the hall is often centrally located in the house, and receives little light, wallpaper in the light tones should be selected. A light-toned tapestry not only increases the apparent size of the hall by virtue of reflecting more light, but also by having perspective in its design that carries the eye into remote depths and subtle shadows. Its colors may also anticipate the color schemes of the rooms opening from the hall, thus making a harmonious and unified whole.

The high ceiling may also be reduced by resorting to devices that emphasize the horizontal lines. Divide the height of the wall into three parts, a deep dado and cornice, in addition to the field, and treat each one differently with proper interrelation.

The dining room and the hall often have a dado. This is the name for what was formerly called a wainscot, which in turn means wall-protector, a covering of wood laid against stone or brick walls for comfort and warmth.

Originally before plaster was employed, its object was purely useful, although according to the means of the builder, it was carried to greater or less height. Plaster was then introduced as substitute for wainscoting, and as it was cheaper and easier to apply to the wall, and as wood grew scarcer, people ceased to employ it at all for sheathing inside walls, the only vestige being the baseboard to keep the scrub brush from plaster or paper, or to prevent chairs from rubbing up against it.

The dado, then, should have a structural aspect. A rich, dark leather paper in deep colors to hide defects of wear and to afford structural appearance and support like wood is a favorite choice for the dado in a room where there is a certain richness in furnishings. Lincrusta papers which come in a wide variety of styles for this purpose are also admirable.

Tapestry paper is well placed above a dado in order to keep the feeling of solidity about the wall itself, reserving the shadowy depths in the tapestry pattern for the upper portion where they are obviously an illusion. Especially since tapestry papers are so often used to emphasize width, the dado which makes a decided horizontal line, increases the desired effect by reducing the height.

Rooms on one floor usually have the same height but are otherwise of different dimensions. This means that they cannot all be correctly proportioned, and here is an opportunity for frieze or border to make the necessary modifications. Borders should not be placed at random just for variety or novelty. They must do what the name implies, border upon something, conforming strictly to its lines. A rambling border draped around like a bow knot has nothing to recommend it. It must confine something like a frame, and just as you would not hang an empty frame, neither should you plan borders aimlessly flowing toward some unknown destination.

A border is used to mark panels, to accent windows or doors and for similar purposes. A frieze goes along at the top of the room horizontally, and does not lapse into any other position. The frieze performs its best function when it is deliberately selected to modify the height of the room.

Do not have friezes with realistic designs that show a hundred woodchoppers on the verge of felling a hundred trees all day and all night, or equally disturbing and startling scenes. Avoid the calamity of half a man or beast at the end of the frieze, especially if it is in a playroom or nursery.

Conventionalized patterns are always preferred, as one is spared the unsatisfied suspense of waiting for something to happen, as a flying bird that will never alight on the tree a half inch away.

The use of wall paper in panels also presents an air of importance as architectural embellishment that is more difficult to achieve when the paper is hung continuously. It enables one to use a stronger and more decided pattern partly because its insistence is relieved by the enclosing moldings, and partly because actually less of the pattern is used, for it is surrounded by wood surface. The effect of framing also makes a pictorial wallpaper a pleasing choice, and this panel arrangement is one of the most pleasing ways to use pictorial paper.

---

**The man who starts out with the idea of getting rich won't succeed; you must have a larger ambition. There is no mystery in business success. If you do each day's task successfully, stay faithfully within the natural operations of commercial law, and keep your head clear, you will come out all right.—John D. Rockefeller.**

*More Economical to Use*

Build with or Specify  
**ASHLAND  
CONCRETE  
WALL TILE**  
A High Grade Building Unit

Approved by Phila. Building Dept.

**B**RICKLAYERS like to lay it. They don't have to lay down the trowel, and one tile is equal to six bricks, which is laid almost as quickly as one brick.

In addition to the ease of handling, there is also the important advantage to the builder or owner of quick source of supply and a large stock available for prompt delivery.

There are many advantages compared to brick. It is an excellent base for stucco or plaster, and is even attractive enough to be used without stucco for any type of building.

## As The Editor Sees It

### NEW FEATURES IN APARTMENT HOUSE BUILDING

BY E. A. MAC DOUGALL

President, The Queensboro Corporation,  
New York

Address Before the Convention of the  
National Association of Real Estate  
Boards, Cleveland, Ohio, June 29th,  
1923.

#### The Problem

Apartment houses with the new features which I will describe and discuss, will provide the better homes which people today are demanding and will thus help to solve the housing situation in many large American cities.

The accelerated growth of apartment house building generally has been brought about by increased expenses and difficulties of maintaining an individual home. The problem of servants, coal, furnace attention, garden and general upkeep, has been felt by a great many householders to be insupportable. This condition has been nation-wide and has resulted in the building of many apartments throughout the country.

I suggest that the real estate profession take a lesson from the automobile business and each year bring out a better product to improve this situation.

#### The New Features in Apartment Building

There are two essential new features of these apartment houses. From the economic standpoint the apartment will

be sold on a co-operative basis to its tenant-owners. From the structural standpoint it will have an interior garden with all that it implies and connotes. The builder who fails to recognize at this time the need of providing houses of a type that makes for economy of use as well as of cost fails to meet the demand of the public. The architect of apartment houses, too, must provide in his planning, for all the advantages, such as section, as the highly restricted beautiful residential district of Cleveland affords.

These new features have already been put into effect in the garden apartment development at Jackson Heights. If I speak later of this particular development I do so only in order to deduce from a successful experiment the general principle which must apply in the solution of the entire problem. Let me tell you how these two features developed.

#### The Park Avenue District

First, however, let us describe for the sake of later comparison, the Park Avenue district of Manhattan Island, which is in a way typical of the better apartment house districts of other cities. It is the section most sought after by wealthy people in New York City and where the most expensive type of apartments are still being built. Land values here are very high. On the street leading off Park Avenue, which do well for

purposes of comparison, the apartments are of six, seven and eight rooms.

Even this relatively high cost of land per family is based on the use of 70% to 90% of the land area. The buildings often hold several hundred families. It is necessary, in that neighborhood, to cram just as many human beings as can be persuaded to live there, on a given area of land.

In these Park Avenue buildings of the best type some of the apartments, principally those which front on the street, have good light and air, but many of the rest, those on the sides and rear, have a narrow outlook on small courts. Custom makes people put up with these conditions but comparison with the individual house is inevitable and unfavorable. Then, too, many of these Park Avenue properties depend for their light and air on their neighbors. There are still many low buildings in this district. As soon as they are "scrapped" as they are bound to be, and the neighboring properties improved, many of these luxurious apartments, bringing high rentals, will lose their sunlight and outlook, and their rental value will be heavily depreciated.

At Jackson Heights we have not the same hampering restrictions as has the Park Avenue district, where the land is already well built up, good plottages are difficult to obtain, and where the land is excessively costly, compelling building high in the air.

**DRAWING

KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

We control a tract of land about one-half as large as Central Park, which was farm land within the memory of people living. We have developed it from raw land and built as large groups as was possible whether from the point of view of design or of economy of construction.

We have learned as a result that a city block is the best unit of apartment building. By studying the cost per family of the land used and keeping in mind that we must compete with the individual home we have discovered that we can build as low as 38% of the lot area covered in seven and eight-room apartments, only six stories high and create a wonderful garden and open space.

We can build in small units with only two families to a floor assuring privacy. Each apartment has three or four exposures like a country house. The principal rooms and some of the bedrooms are corner rooms and the space between the buildings is 36 feet 8 inches, so that the buildings are separated, not so much by passage-ways as by lawns. These side lawns open into a vast interior garden running the whole length of the block, 80 feet or more in width, providing an outlook and a garden character which is unthinkable in Park Avenue. In fact, it can seldom be found in any save the largest estates.

#### *Progress and Improvement*

Briefly here is the story of how we have improved the type of apartments, year by year, which you recall I said at the start, was essential if the housing desires of the people were to be met.

In 1920 we built a block of twelve four-story walk-ups, apartments designed by Andrew J. Thomas, in which the passage-ways between the buildings were 15 feet. The kitchens and fire escapes and some of the baths were on these passages. This space added greatly to the value of the apartment since in summer they did much to create a circulation of air and to admit sunlight to the group. This group occupied about 40% of the area of the block.

This group attracted to Jackson Heights many people who wanted more luxurious five and six-room apartments with larger rooms than could be had in the four and five-room apartments and we, accordingly, had Mr. Thomas design this group of apartments called the Chateau Apartments. We carried up the buildings to five stories, two apartments to a floor, using push button elevators. We reduced the area occupied by increasing the side spaces between the buildings to 19 feet 6 inches in the shortest dimension. The buildings were fireproof on the first floor with fireproof exterior walls, roof, and elevator and stair wells.

#### *The 1924 Design*

This proved successful and as a result

we have now under construction a third improvement, our 1924 model. In this group the apartments are of seven and eight rooms on an average. We retained the general plan of having two apartments to a floor and improved the older group in every respect that we could think of, whether it was in planning the arrangement or little details and refinements of construction and specifications. The big improvement was in adding another story, in making the buildings fireproof and placing the building 36 feet 8 inches apart, and in making the area occupied by the buildings 38%. We feel that we now have a model which has all of the advantages of the Park Avenue apartment without its weakness, and which really competes with the individual home.

#### *One New Feature—Co-operative Ownership*

Co-operative ownership which we have adopted at Jackson Heights is one of the things that makes possible this type of apartment. The family which owns a cooperative apartment is there to stay and they look upon it as a permanent home. They are consequently just as particular to have it perfect and complete in every respect as if they were going to the best architect and having him design for them the best individual home that he could produce.

The rental apartment, on the other hand is not built for permanence, but often as a speculation. The tenants are apt to look upon it as a temporary refuge and they are more ready to live in four or five-room apartments with possibly one bath.

In a co-operative apartment, seven or eight rooms are a better size with two or three baths, servant's room and bath and the most complete kitchen and dining arrangement, closet space and other details.

Since the war, the increased cost of renting has become so great that many apartment dwellers have been unable to keep up their apartment homes. Caught between the expenses of private home ownership and the expenses of rental of an apartment, apartment ownership by tenants has been a natural solution and should continue to be so.

Tenant-ownership in itself is not new. It goes back both in this country and abroad to the time of the first apartment building. In some instances in the early days perpetual leases were given to tenants. These leases become very difficult to handle as death and changes introduced complications in the original ownership of the buildings. But here too American ingenuity gradually overcame difficulties and developed a mode of procedure.

(Continued from Page 612)

Nowhere, either in Europe or in America has co-operative ownership been applied in a larger way than by the Queensboro Corporation at Jackson Heights. Here, profiting by mistakes made in the past in the form of organization and benefiting to some extent by the solution of similar problems in other cities, the

Jackson Heights Plan of Tenant-Ownership was evolved.

This plan, although worked out independently by the Queensboro Corporation has many points of similarity with what is known in England as Co-Partnership Tenant Plan. In England industrial villages were built by funds subscribed by workers and others; these workers obtained stock for their contribution and were privileged to rent buildings in the development. If a change of employment forced them to move, they could leave the premises and still retain a return upon their investment in the stock which they owned in the co-partnership enterprises.

In this way the loss and sacrifice frequently involved in the ownership of an individual home were avoided, and at the same time, the freedom of action of the worker was not interfered with.

Any such plan as the Jackson Heights Plan involves the organization of a company to take title to a piece of property upon which there is erected an apartment building. The title to the house and lot resides in the company. Its stock is sold *pro rata* to the persons who occupy the building. The occupants lease their apartments from the company in which they are stockholders and thus become actually their own landlords and pay rent to themselves.

No limitation is placed on the sale of the stock, but the lease which is a yearly lease renewable at the option of the tenant indefinitely is a personal lease with the tenant and cannot be assigned without consent. This is considered to be one of the strong features of the Jackson Heights Plan in that it prevents deterioration in the tenancy of the building by reason of transfers to undesirable parties. The value of the stock which rests largely in the lease is therefore effectively controlled.

Whenever the fee has been passed in unrestricted real estate developments, it has usually been found impossible to restrict the transfers of this fee and sooner or later there is a tendency toward deterioration in the class of people living in the section. It is believed that for tenant owners the Jackson Heights Plan protects so far as is humanly possible from this deteriorating tendency.

The management of the building is in

the hands of an experienced manager. At Jackson Heights the Queensboro Corporation manages all of the co-operatively owned buildings and is therefore enabled to effect economies by large scale purchases.

The tenant-owners merely pay in their monthly contributions toward upkeep, etc., and as directors of the Corporation meet to receive the reports of their agents at proper intervals.

But there is another element to be borne in mind in this discussion, and that is the structural element I have already mentioned. The new conditions—the uneconomic ownership of private single residences and the economic ownership of apartments by tenants have developed these new structural aspects of the apartment home. These new conditions have brought about a new architectural point of view and architectural accomplishment.

### *The Other Feature—Interior Gardens and New Structural Features*

The architect of city homes has an important duty to perform in improving along scientific lines the design and construction of multiple family houses so as to provide the healthful, wholesome atmosphere of an individual house with its sunlight privacy and pride of ownership combined with the convenience, efficiency and economy possible only in a multiple family house.

Summed up, experience at Jackson Heights has shown the following to be the essentials of good planning of multiple family houses:

1st. Comprehensive block development rather than unsymmetrical and irregular height and type of building which has heretofore prevailed.

2nd. Maximum of sunlight and ventilation insured by the erection of buildings two rooms deep on the four sides of the block with an interior garden; the interior garden taking in the entire length of the block and being a substitute for the old type of development with its individual back yards, fences, clothes lines and other unsightly features. This immediately brings down the area of the building from 70%—the maximum permitted by the N. Y. Tenement House Law to as low as 30% to 35% of the lot built up. Such gardens are at Jackson Heights, 500 feet long by 70 to 100

feet in width, and are created for the enjoyment of all the tenants in the block. Noted architects have planned these gardens. A man occupying a five, six or seven-room apartment enjoys a garden which formerly was only within the means of a millionaire. To insure the permanency of these gardens, the land is dedicated by the building company by proper deed for the benefit of the adjacent owners and its use restricted by covenants running with the land.

3rd. Buildings are set back from the lot line in order to provide distance between buildings and an opportunity for lawns and planting in front of the house.

4th. The building of detached or free standing apartment buildings which give an opportunity for many corner rooms and consequent cross ventilation.

5th. The silhouette produced through a picturesque arrangement of roofs and dormers, towers and other features adds a great deal to the attractiveness of the new type of apartment.

At Jackson Heights in the Chateau group, for instance, the roof is of medieval French Chateau type of vari-colored slate.

The Cambridge Court has cornice and balustrade of the Georgian type of building, with slate roof and dormer of the Colonial architecture of the 18th Century. The inspiration was to some extent derived from the Freshmen Dormitories of Harvard University along the Charles River, which are a noted American application of the Georgian style. In another group the Italian effect is shown. In yet another, the English.

The movement toward co-operatively owned apartments of attractive and convenient design is, of course, not confined to New York. While it has taken hold to a large extent in New York, it has been tried in other cities in the United States, largely because of the success which the plan has met with at Jackson Heights, where over 1100 tenant-owners are now living in over 100 apartment buildings.

The plans of tenant-ownership applied elsewhere in New York and in other cities throughout the country vary in detail from that described as The Jackson Heights Plan of Tenant-Ownership, but in essence are the same. The transfer of the lease is controlled by the tenant-owner corporation so as to protect the other people living in the building.

In Europe, tenant-ownership is of older standing than in this country. The growth of the plan has been fast in Paris for the same reasons as have caused its growth in New York—high rents, scarcity of accommodations and the feeling on the part of the former renter that he is spending too much for rent with little to show for it.

Several large apartment buildings oc-

cupying an entire block are being erected in Paris in the vicinity of the Champ de Mars by the Societe Anonyme Franco-Americaine, in which the artistic treatment of the French is being combined with the practical comforts of the American apartment. This tenant ownership movement has also spread to Germany and to the Scandinavian countries, where many handsome apartments are co-operatively owned. This movement may be said to combine the comfort, ease and economy of apartment living with the freedom and sense of independence which goes with ownership. In this respect it is an internationally important movement in that the best citizen is the man who owns his own home. At the same time it is in keeping with the trend of the times which compels people to give consideration to economy in their living.

The facts I have given to you, gentlemen, are significant. Both in the United States and in foreign countries the spread of tenant-owned apartments is the best proof of my contention that they will help solve the housing problem.

The new features in apartment buildings must solve this grave situation confronting the more densely populated centers of the world. With improved buildings, such as I have outlined to you—with co-operative tenant-owned apartments—one of the greatest problems which America is facing today will find its solution.

## PAINT AS AN AID TO RENTING AND SELLING

### *Color Combinations for Exteriors*

BY ALBERT BRACE

A famous pioneer merchandiser is said to have advised his clerks not to talk but to show the goods! This was many years ago but go today into the palatial department store which still bears his name and you will find that policy still carried out to the letter. The clerks are unobtrusive alike in dress, manner and conversation; the fixtures, lighting and interior decoration offer a background that at once enhances your own sense of well being and sets off the most humble necktie or most gorgeous bit of jewelry to its maximum effectiveness.

The net result is that without one word being said you *want* to buy though you may have entered on the most idle of time-killing shopping ventures—almost literally the only remedy, if you should save money, is to keep moving. Thousands upon thousands of people visit this store from all over the Middle West and practically the only sales effort exerted is that employed by their own eyes. The people behind the counter, scarcely uttering a word, display everything however trifling in just the right setting and make the change, that's all.

Is there not a sermon in this policy worthy of consideration by the builder selling or renting a house? If he adopts it, then the very first step is to see that his offering is given just that quality of external appearance which will permit the prospect's eye to do the work rather than a flow of hasty sales talk on his part. True, shrubbery, lawn and general background will enter in, but if the house itself is not of an appropriate color or shows poor taste in the selection of a combination, the rest will be very largely set at naught.

Leaving style out of the question we are as a nation entirely too prone to paint our houses as *we* like them, entirely without regard to the effect on neighboring color schemes and often in defiance even of natural surroundings. This is not to say that we should all take a course in the fine arts and then in landscaping to boot, but the observance of a few proprieties in external painting will make life pleasant for us all instead of good enough for just one. To be sure this is a free country and one may indulge consciously or unconsciously in exotic tastes, but while the result may be all right for the one who toasts his toes inside, how about the families whose porches open upon a vision of pink and white, green and orange or worse!

This parenthial lecture is intended rather for the private than for the professional builder—the latter as a class are too experienced in what is right to give any such pain to those about. Nevertheless an eye for color is not ingrained in us all and since more than one prospective purchaser or renter must be considered, a few remarks on the fundamentals of pleasing as many as possible may not come amiss.

Assuming that the question of painting a new house or group of houses arises in a case where there are already homes adjoining, the first consideration is that of the color scheme predominating among the latter. If a decision is made regardless it is more than likely, unless the houses are widely separated, that the new dwelling will give a radically different effect from that originally pictured in preparing the specifications.

One reason lies in the fact that a light color placed next to a dark color makes the former appear lighter and the latter darker. Similarly a red house adjoining a green house intensifies the red color of the first and the greenishness of the second. At a distance these intensifications are not so observable but the closer one approaches the greater the effect becomes. All in all it is dangerous to employ a given color merely because a house observed somewhere else looked well under such treatment.

Aside from environment there are in the question of proper color, the factors

of light and time of year and in these respects considerable may have to be anticipated. An all-white house may look bleak and cheerless on a plot devoid of grass, shrubbery or leafy trees—with these in abundance the effect will change to one of snug cosiness. Most houses are flattered by summer foliage; the test comes in winter when there is little to set off natural beauty or hide inherent shortcomings. The English style plaster houses with exposed beams stained in brown are a good example of all year 'round effectiveness.

Color preference in individuals is as it should be, a matter of personal taste, influenced according to age, temperament, sex, race, education and environment, but there are certain general laws and pleasant effects based on these that cost no more to attain than unpleasant ones. Color is a medium whereby a house can be made to appear larger or smaller, lighter or darker, more cheerful or formal—all important when it comes to selling.

To illustrate, if you would make a narrow tall house appear lower and wider, use a light color below any natural dividing line and a darker, heavier color above, including the roof. To make a house appear higher, use one color only from foundation to roof and that a light one. The trim in such a case should be a still lighter color and the roof given a medium shade. By painting a house in light colors, avoiding strong contrasts between body, trim and roof, a house may be given a larger appearance.

In general it may be said that a darker trimming color makes a house look smaller; conversely a trimming color lighter in shade than the body color makes it appear larger. Blue and yellow expand, red contracts, tan, gray and pink have an enlarging effect. Light shades give cheerfulness while dark ones lend dignity and sedateness. The old-fashioned white with green blinds is always good if the grounds are reasonably spacious and filled with plenty of trees and shrubbery. Failing these, light gray, Colonial yellow, cream, ivory or Bedford stone will serve.

As a reaction from the gingerbread patchwork peculiar to the homes of the eighties and nineties the modern keynote is simplicity. Gone are the sombre greens and grays, the purposeless ornaments, turrets and gables, the pillars done in one color at the base and another at the cap. If there is any danger now it is in the overworking of white which increasingly threatens to extend to houses the styles or surroundings of which make such a treatment utterly inappropriate. In general it will be found safe to adhere to some such general plan as that which follows:

#### *Large Colonial*

Body—White, light yellow or buff. Columns and trim—White. Blinds—

Green or bronze green. Roof—Natural or moss green.

#### *Dutch Colonial and Gambrel*

Body—White. Trim—White. Blinds—Green, turquoise or robin's egg blue. Roof—Dull green, dull blue, natural or multi-colored.

#### *Rustic Shingled*

Body—Brown, green or gray or dark red. Blinds and Roof—Same, in deeper or lighter, harmonizing shades.

#### *Plain Town*

Body—Light brown or gray. Trim, Blinds and Roof—Dark brown or gray.

#### *Clapboard and Shingle*

Clapboard (lower half) and Shingle (upper)—Light or dark olive and dull red, cream and brown, gray and dark green or dull red.

#### *Bungalow*

Body and Roof—Browns and dark greens. Trim—Same, or white or ivory.

#### *Brick*

Body—Red or buff. Trim and Blinds—White or apple green. Roof—Dark.

#### *Cement or Stucco*

Body—Gray, white or yellow. Trim—White or brown. Blinds—Turquoise blue or green. Roof—Red or dull green.

#### *Cottage*

Body—White (or silver gray.) Trim—White (or lead color). Roof—Natural shingles (or stained dark gray or brown).

The importance of considering surroundings in deciding on the color treatment of a home is difficult to over-emphasize, and a few basic suggestions along this line may be in order. As has been said, white requires not only an appropriate style but plenty of trees and shrubbery to soften the formal effect and give a home-like look. Even when the leaves have gone the grays and browns of bare trees will perform the same service provided there are plenty of them. Black, of course, has no place at all except in lining sashes on a gray, blue or green body and for certain metal work.

Because it is nature's own color and omnipresent a large part of the year, green on bodies is a poor choice except in very dull tones on shingles or as a paint on houses crowded rather closely together on the outskirts of cities. It cannot vie with natural foliage and serves as an unintentional obscuring or camouflaging agent. Extremes are to be avoided and it represents the other extreme from lurid combinations of pink and white, blue and brown, etc.

If a very unobtrusive effect is desired that shall still be within the realm of good taste, dull browns, grays or yellows are best with trimmings in darker or lighter shades of the same color. For a house located on a plain without much relieving foliage or shrubbery, dark red, grays and browns are suitable without strong contrasts in trim. Outbuildings will tend

to relieve any possibility of monotony.

Such outbuildings, garages, barns, stables, sheds, greenhouses, play houses and the like should be painted in harmony with the house. Painting them in odd colors would be as unpleasing in effect as a dining room furnished with an Italian Renaissance table, Jacobean, Queen Anne and Louis XIV chairs, a Sheraton server and an Adam sideboard. A patch work quilt is striking; what is wanted from out-buildings is an unobtrusiveness that adds to the general scheme of things.

The roof coloring of a building is another important consideration. When slate was in its prime there was a depressing monotony that accorded well with the old-fashioned striving for dignity. The great number of new roofings have brought with them much variety in the way of coloring, the color being an integral part of the fabric or metal. In the old days many of these would have been regarded as altogether too vivid but the discovery was made that combinations of individually strong blues, greens, browns and reds give the same highly pleasing effect as an autumn landscape. Such autumn effects are, of course, most suitable on plain bodies like cement, rough plaster, etc.

In days now gone by it was apparently considered little short of heretical to paint window blinds anything but green, usually the rich "shutter green" of the manufacturer's prepared paint color card. Nowadays with the liberalism which permeates post-war America one can see in any representative suburb, the conventional green contending with at least an equal number of blues, blue greens, apple greens, buffs, grays, whites and even creams. Other trim, including sash, downspouts and grill work often follows suit especially on stucco, concrete or brick houses. Porch floors are usually confined to utilitarian tones of gray and brown, the steps and risers to match or the latter painted white or a light harmonizing shade. Porch ceilings unless natural wood varnished should be painted light gray, green or sky blue.

Getting back to the house as a whole there is a question as to color which is not always thoroughly appreciated. The relative durability of colors is a matter rather of pigment values than of artistic choice and is too technical a subject for extended discussion here; present purposes will be amply met by the most outstanding comparisons. Viewed from the practical angle, white is about the least durable of paint treatments, a house so protected being likely to require doing over in as little as three years.

The same house, done in a tint, that is white with a small percentage of color added, will not require repainting perhaps for another two or three years. Forgetting artistic considerations for the mo-

ment it may be said that blacks, browns and reds are most the durable whereas bright greens, blues and cold yellows are most susceptible to deterioration from sun and rain. Excellent compromises are the shades which in general make up the mixed paint color cards. These tints, aside from offering adequate variety, represent the pick of those light shades which tend to reflect the rays of the sun rather than absorb them as do the dark reds and blues and grays. Thus they give not only longer paint protection but assure a cooler house during the hot summer months.—*National Builder*.

### A FEW USEFUL NOTES ON FINISHING INTERIOR WOODWORK

BY A. ASHMUN KELLY

If a room is to be finished in white pine, and the wood is to be left in its natural color, which is the best way, care should be taken to prevent any oil or grease getting on it, nor should any of the so-called fillers be used, as they also stain the wood, and, as far as white pine is concerned, do no good.

The original freshness and beauty of this wood can only be preserved by first finishing the woodwork with a plane very fine set, and by avoiding the least plane marks. Then when the wood has been properly prepared and cleaned, the smoothing having been done without using an abrasive material, like sandpaper, it should have a coat of pure white shellac, the alcoholic solution.

After this has dried it should be rubbed down, sandpaper of fine texture being used, and be brushed off clean of dust, when it should have two or more coats of light colored copal varnish. These coats should be rubbed down smooth, finishing with an unrubbed coat of light copal varnish.

The more varnish you apply the greater the apparent depth of effect, but at the same time the color is increasing, hence the fewer coats of varnish the lighter the finish. It is the same when treating maple wood. A cheaper finish would do with just two coats of white shellac, both coats to be sandpapered smooth.

White pine thus finished will afford a very handsome effect, and while it will not preserve its first clear light color, time will not fail to enhance its attractiveness by giving it a mellow glow that no hand-work can ever supply.

To secure a light finish on any light colored wood it is advised to apply a coat of shellac first of all, for this will preserve the natural color of the wood better than anything else, besides making a foundation for the following coats of varnish.

White or bleached shellac should, of

course, be used, the dark or orange colored shellac being unsuitable. It does so well in giving a foundation that you do not need to apply any other filler, that known as liquid filler being generally used for wood of this character.

Close-grained woods, like white and yellow pine, holly and maple, do not need filling, save as shellac fills it. Still, it is customary for some finishes to paste-fill such woods, the idea being that there are soft parts in all such woods, or certainly in pine, and hence the filler fills the sappy or soft places, and levels them up with the surrounding harder or firmer parts. This is very true, too.

Some object to using shellac on any bare wood, except it to be hard pine, they claiming that if oil varnish be used on it the varnish will scale off. Shellac is the hardest gum varnish we have, and oil varnish does not take too kindly to it; yet with care, such as sandpapering to form a tooth for the oil varnish, a good result may be expected.

However, in order to maintain a clear light color in a white wood there is nothing that can take the place of white shellac. There is no oil in it, and, of course, no grease. It dries out leaving simply the original purified shellac. Also, it dries quickly, thus removing it from the danger of injury that is always present with undry finishes. And its surface is so hard that the oil or turpentine from the oil varnish has no chance for penetrating and injuring the finish.

Those country contracting painters who have been used to finishing houses in white pine or like soft woods, have some difficulty in forming a proper estimate of the labor required in finishing hardwoods.

It is safe to say that the cost of doing a room in cherry, black birch or white ash is easily double what it is for doing a white pine finish. Black ash or elm finish takes about double the time to do that is required for white pine finish, done with paint, or even with varnish finish. Oak, red and white, costs rather more to finish than cherry or black birch.

—*Building Age*.

### TERRAZZO FLOORS

A terrazzo floor finish is a surface of irregular marble or granite fragments embedded in cement mortar and ground to a smooth even surface.

A terrazzo finish should preferably be two inches thick. Usually reinforcement is not required. The terrazzo should be laid, if possible, before the concrete floor has hardened. If the concrete foundation slab is allowed to harden before the finish is placed, it should be left somewhat rough, and when ready to receive the finish it should be carefully cleaned,

drenched with water and painted with a grout of neat cement of creamy consistency. Immediately, thereafter, the binder course of the terrazzo finish should be placed, making it 1 inch to 1¼ inches thick. This binder or "filler" course should preferably be a 1:3 cement-sand-mortar. The sand should be clean and well graded. This binder course should be tamped into place and screeded to an even surface.

The placing of the finish is sometimes delayed, but better results are obtained if it follows immediately after the binder course is completed. The finish consists of a mixture of portland cement and marble, or stone chips or screenings, to which a little sand may be added. Some architects specify definite proportions of cement and chips, such as 1:3, while others merely specify that enough cement be used to fill the interstices. This mixture is spread evenly to the proper thickness and rolled; then additional marble chips either of the same size or a little are spread over the surface and rolled in. Enough chips should be used so that they will cover at least 85 per cent. of the finished surface.

After the finish course has hardened somewhat (often at the end of twenty-four hours), but before it gets too hard, it should be ground to a smooth, even surface by a rotary rubbing machine, or by hand, using carborundum brick.

By using mineral coloring material and chips of different colors, shapes and sizes, an infinite variety of color and mosaic effects may be obtained. Borders and patterns of contrasting colors can readily be worked out by placing boards in the proper position when the main body of the floor is laid and later filling in the vacant places thus provided with a mixture of the desired color. Joints that are hardly noticeable can thus be secured. Although much larger areas have been laid successfully, it is best to lay terrazzo blocks not over ten feet square in order to provide properly for expansion and construction.—*Concrete Floors*.

**Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!**

**The impractical dreamers are not the architects, but the clients themselves, as a rule.**

### THE PROPOSED IMMIGRATION LAW

*Bill To Be Pushed at Next Session Is  
Negative and Ignores Many Social  
And Economic Requirements*

BY JAMES A. EMERY

*Counsel, National Association of Manu-  
facturers*

The need of the country is a constructive, selective immigration policy which undertakes to affirmatively meet the economic and social problem involved, rather than a proposal of negation, which merely multiplies and intensifies our existing difficulties.

Mr. Johnson, of Washington, chairman of the Committee on Immigration and Naturalization of the House, proposes to secure enactment of the identical measure reported to the House February 15, 1923. The Johnson bill, with slight modification, is the chairman's original proposal, introduced in the Sixty-seventh Congress.

#### *Terms of Johnson Bill*

Mr. Johnson's proposal is to admit a base quota of 400 from each admissible country, plus 2 per cent. of the number of foreign born individuals of the various nationalities resident in the United States, as determined by the census of 1890. The bill excludes all persons not eligible to citizenship (Takao Ozawa v. U. S.—U. S. Ad Op. Dec. 1, 1923, page 11) unless admissible as non-quota immigrants. The present 3 per cent. act permits a gross immigration of 357,803. The

Johnson bill would cut this to 168,837, which, plus the total base quota of 400 to each nationality, adds 17,600, or an admissible total of 186,437.

The selection of the 1890 instead of 1910 or 1900 census is intended to cut the immigration from eastern or southern Europe. Thus, for example, the Italian quota is 42,057 under the present 3 per cent. act predicated upon the 1910 census. It would become, under the 2 per cent. 1890 census, 3,912. But the Johnson proposal likewise reduces even the quotas from what are accepted as the root stock of the United States. Thus the United Kingdom quota which was filled May 30, 1923, would be reduced from 77,342 to 62,458; Germany from 67,606 to 51,227; France from 5,729 to 3,914; the Netherlands from 3,607 to 1,637; Norway from 12,202 to 6,454; Sweden from 20,042 to 9,561.

The present act allows a maximum of 20 per cent. of the quota to be admitted each month. The Johnson bill would permit but 10 per cent. of the quota each month.

The Johnson bill would permit the entrance of an otherwise admissible alien husband, wife, father, mother, unmarried minor child, unmarried minor brother or sister or unmarried orphan niece or nephew of a citizen of the United States outside the quota.

It would likewise permit the admission outside the quota of the alien husband wife or unmarried minor children

of an alien who has resided in the United States two years and been a declarant for citizenship at least one year.

The Johnson bill would require the issuance of a certificate by United States consular officers to each immigrant applying for the same, its verification under oath, and the answer therein to a series of questions substantially similar to those addressed to the immigrant on arrival at a United States port. No more such certificates are to be issued than is permitted by quota figures. A similar certificate may be applied for by relatives in the United States on behalf of alien persons otherwise admissible.

The quota limitations of the act do not apply, in addition to the blood relatives specified, to native born citizens of the countries of the North American Continent, the islands adjacent thereto, or to immigrants from quota countries who have resided continuously for at least five years immediately preceding application for admission to the United States in the countries of the North American Continent or to bona fide immigrant students over sixteen years of age seeking to enter the United States for the purpose of study at an accredited educational institution, or to any immigrant serving in the Army or Navy of the United States between April 6, 1917, and November 11, 1918, and honorably discharged.

The bill likewise recognizes as a non-quota immigrant one who is a "skilled laborer if labor of like kind unemployed

PRINTS**

cannot be found in this country," the determination of the application for such skilled labor having been made in each individual case by the Secretary of Labor, upon written application of an interested person. The last is the provision of the act of 1917. But the committee reports that so few skilled laborers have been admitted under the contract labor section that no statistical records have been kept, although many have been debarred as contract laborers because they had immigrated in response to letters from relatives offering them positions.

The Johnson bill would be a substitute for the present 3 per cent. act, but otherwise operate as an amendment to the so-called Burnett bill of 1917, our basic immigration statute.

#### *Objection to the Johnson Bill*

The provisions of the proposed bill defining the admissible blood relatives of naturalized citizens and declarants for citizenship, and providing for the issuance of consular certificates are decided administrative improvements upon the present law, but the proposal, in the light of experience under the operation of the present restrictive act, does not meet the more serious economic or social problems of immigration, but, on the contrary, rend them more acute.

At a time when, according to the declaration of the Secretary of Commerce, "we have recovered from an unemployment of five million to a surplus of five hundred thousand jobs, it is unwise to substantially prevent any re-enforcement of the native labor supply in the face of an existing and enlarging economic need."

The report of the Commissioner General of Immigration for the first fiscal year of the operation of the 3 per cent. act discloses a net deficit of 68,734 "laborers." While the figures are incomplete, the indications are that the net immigration of the second year, ending June 30, 1923, will show little net gain, if any.

The experience of the basic industries of railroad construction and of building construction have shown a continuing labor shortage since May 1. In the construction industry alone this has threatened a self-destructive increase of cost which necessitated the curtailment of delayed operations now estimated at a total need of substantially twelve billion dollars, with an annual requirement in excess of five billion dollars a year indirectly affecting the demand for consumable goods and services in all other industries. The labor demand in the building trades is intensified by the fact that from 1910 to 1920 (U. S. census 1920) there was an increase of fourteen millions in population, but a decrease during like period of 18 per cent. in the number of available brick and stone masons; 26.7 per cent. paper hangers; 19.8 per cent plasterers; 19.2 per cent. roofers and slaters;

9.1 percent. painters; 28.4 percent. building laborers. This represents a cumulative effect of labor apprentice restriction. The lessened number of building mechanics is accompanied, according to universal testimony, by a decreasing efficiency of individual performance, averaging conservatively 25 per cent., which adds proportionately to the increased wage cost. Authoritative, conservative estimates of delayed building construction and present requirements in fifty cities, including about one-fourth of the population, show that building can continue at 25 percent. above normal activity for ten years to meet the present deficit. The country is confronted with the alternative of going forward with construction that adds permanently to living costs or delaying the program to avoid the larger artificial portion of the present burden, threatening an injurious reaction. The enlarging immigration from western Europe, particularly the United Kingdom, is contributing a steady stream of building mechanics of which further decreases in immigration quotas would tend to deprive us.

The transformation of the national immigration policy, supplementing the native labor supply, from one of extreme liberality to prohibition or drastic restriction demands, in the public interest, a flexible administrative buffer to permit our industrial life to adapt itself to the change, without serious economic injury. The proposed bill is immigration prohibition under the guise of restriction.

The present demands of industry are stripping the farms of essential agricultural labor, in the South especially, where a serious negro emigration to the North threatens the primary crops and creates new social problems in the northern communities to which the negro comes.

The policy is purely negative and offers no answer to the social and economic requirements for better racial and occupational immigration selection, the registration, intelligent ascertainment of immigration requirements and opportunities by cooperation of the states and nation, the systematic instruction and naturalization of the alien, and his prompt deportation when displaying marked criminal tendencies or advocating or practicing political change by force or participation in or incitement of civil disorder.

Economically, the policy of the bill would tend to maintain an inadequate labor supply, resulting in a wage competition which, adding nothing to the volume of production, increases nominal wages while disproportionately enhancing prices and increasing the spread between the cost of industrial commodities and services and the buying power of agricultural products. It adds, therefore, to agrarian discontent by invidious comparisons between industrial wages and returns.—*The Constructor.*

Architect taking bids.

**School,** Larksville, Pa. Architect, R. M. Herr, Simon Long Building, Wilkes-Barre, Pa. Owners, Larksville School Board, J. Casey, secretary, Larksville, Pa. Frame, 2 stories and basement, 87x155 feet, slag roof, hardwood and pine floors, hollow tile, roof ventilators, skylights (heating, plumbing,

electric and ventilating reserved). Owners taking bids due October 5th.

**Garage and Salesroom,** Market street, Wilkes-Barre, Pa. Architects, Knapp & Bosworth, 15 South Franklin street, Wilkes-Barre. Owners, Wilkes-Barre Buick Co., 179 South Main street, Wilkes-Barre, Pa. Brick, reinforced concrete, 2 stories, 72x120 feet. Sketches in progress.

**Temple (add.),** North Franklin street, Wilkes-Barre, Pa. Architects, Sturdevant & Foster, Coal Exchange Building, Wilkes-Barre. Owners, Masonic Temple, care of architects. Brick, terra cotta, 2 stories, 40x110 feet, hardwood floors, electric light, tile work. Will be ready for bids in three weeks.

**Apartment,** Wilkes-Barre, Pa. Architects, Mack & Sahn, Coal Exchange Building, Wilkes-Barre, Pa. Owner, L. K. Collmann, care of architects. Stucco, 3 stories, 38x75 feet, slag roof, pine floors, steam heat, electric light, tile work. Plans in progress. Architects will be ready for bids October 1st.

**School, Gymnasium and Auditorium,** Mt. Carmel Township, Northumberland County. Architect, J. A. McClynn, Simon Long Building, Wilkes-Barre, Pa. Owners, School Board of Mt. Carmel Township, William Hollister, secretary, Mt. Carmel, Pa. Frame and steel, 2 stories and basement, 123x120 feet, slag roof, pine floors, hollow tile, safety treads, roof ventilators, waterproofing, iron stairs, bond, tile work (heating, plumbing, electric and ventilating reserved). Owners will be ready for bids next week.

**Residence,** Wilkes-Barre, Pa. Architects, Mack & Sahn, Coal Exchange Building, Wilkes-Barre, Pa. Owner, I. Blum, 19 East Jackson street, Wilkes-Barre, Pa. Brick, 2½ stories, 30x50 feet, slate roof, hardwood floors, vapor heat, electric light, tile work. Architects ready for bids due October 12th.

**Residence (alts. and add.),** 105 City avenue, Bala, Pa. Architects, Heacock & Hekanson, 1218 Chestnut street, Philadelphia. Owner, Walter S. Detweiler, on premises. Masonry work, mill work, plastering, painting and glazing, tile and marble work. Architect taking bids due October 8th.

**Kerdon Grade School (alts. and add.),** Kerdon, Delaware County, Pa. Architects, Ritter & Shay, North American Building, Philadelphia. Owners, School District of Ridley Township, Delaware County, Pa. Brick, steel, reinforced concrete, cut stone, 2 stories, 25x75 feet, steam heat, electric light, metal lath, composition roof, cement and pine floors, hollow tile, roof ventilators, waterproofing and dampproofing, ornamental iron work, bond, tin-clad doors, metal lath. Owners taking bids due October 6th.

**School,** Woodlyn, Delaware County, Pa. Architects, Ritter & Shay, North American Building, Philadelphia. Owners, School District of Ridley Township, Delaware County, Pa. Brick, steel, reinforced concrete, cut stone, 2 stories, 33x23 feet, 2 wings, steam heat, electric lighting, metal lath, tin-clad doors, bond, ornamental iron work, composition roof, cement and pine floors, hollow tile, roof ventilators, waterproofing and dampproofing. Owners taking bids due October 6th.

**School (add.),** Leiperville, Delaware County, Pa. Architects, Ritter & Shay, North American Building, Philadelphia. Owners, School

District of Ridley Township, Delaware County, Pa. Brick, steel, reinforced concrete, cut stone, 2 stories, 77x25 feet, steam heating, electric lighting, metal lath, tin-clad doors, bond, ornamental iron work, damp-proofing and waterproofing, roof ventilators, cement and pine floors, hollow tile, composition roof. Owner taking bids due October 6th.

**Residence**, No. 2, Haverford, Pa. Architect, Charles F. Rabenold, 1524 Chestnut street, Philadelphia. Owner, name withheld. Stone, 2½ stories, 95x26 feet, slate roof, oak and pine floors, tile work (plumbing, heating and hardware and electric reserved.) Architect taking bids due October 4th.

**Temporary Chapel**, Glenolden, Pa. Architect, Peter F. Getz, 1634 North Sixth street, Philadelphia. Owners, St. George's Roman Catholic Church, Rev. Orr, Glenolden, Pa. Frame, 1 story, 22x65 feet, hot air heat, electric light, slag roof, pine floors. Architect taking bids.

## Pennsylvania Contracts Awarded

**Dormitory Building**, Doylestown, Pa. Architects, Andrew J. Sauer & Co., Denckla Building, Philadelphia. Owners, National Farm School, Doylestown, Pa. Brick, cut stone, steel, stucco, limestone, 2½ stories, 135x48 feet, vacuum heat electric light, metal lath, tile, marble and terrazzo work, kalamein sash and doors, bond, iron work, metal weather strip, plumbing, tile work, slate roof. Contract awarded Hughes Foulkrod Co., Commonwealth Building, Philadelphia.

**School**, Luzerne, Pa. Architects, Schroeder & Schmidt, Weitzenkorn Building, Wilkes-Barre. Owners, Sacred Heart Roman Catholic Church, Rev. Teibe, Luzerne, Pa. Brick, stone, frame, steel, 2 stories, 59x70 feet, slag roof, pine floors, roof ventilators, metal ceilings, waterproofing, rolled steel sash, metal lath (heating, electric work and ventilating reserved). Contract awarded to J. J. Gibbon, Avoca, Pa.

**School**, Glen Lyon, Pa. Architect, R. M. Herr, Simon Long Building, Wilkes-Barre, Pa. Owners, Newport Township School District, S. Scott, Glen Lyon, Pa. Brick, stone, 2 stories and basement, 144x94 feet, slag roof, hardwood floors, hollow tile, safety treads, roof ventilators, iron stairs, rolled steel skylights, tile work. Contract awarded to H. Mailander, 167 Barney street, Wilkes-Barre, Pa.

**Garage**, Wilkes-Barre, Pa. Architects, Knapp & Bosworth, 15 South Franklin street, Wilkes-Barre. Owner, Reuben Trethaway, Wilkes-Barre, Pa. Brick, 1 story, 24x25 feet, slag roof, concrete floors, electric work. Contract awarded to O. J. Behrens & Sons, 179 Blackman street, Wilkes-Barre.

**Residence (alts. and add.)**, South Washington street, Wilkes-Barre. Architect, J. A. McGlynn, Simon Long Building, Wilkes-Barre, Pa. Owner, Dr. S. Hurwitz, 185 South Washington street, Wilkes-Barre, Pa. Brick, 1 story, 17x22 feet, slag roof, hardwood floors, electric light, tile work, general alterations. Contract awarded to F. H. Franklin, 73 Rees street, Wilkes-Barre, Pa.

**Store and Apartment**, 111½ North Broad street, Bethlehem, Pa. Architect, H. J. Weigner, Bethlehem Trust Building, Philadelphia. Owner, J. Judas, National Provisions Co., 9 South Seventh street, Allentown, Pa. Brick, 3 stories, 30x80 feet, slag roof, maple floors, steam heat, electric light, tile work, plate glass, hollow metal skylights. Contract awarded to F. B. Glassmire, Bethlehem Trust Building, Bethlehem, Pa.

**Garage and Apartments**, Harrisburg, Pa. Architects, Starr & Johnson, Spooner Building, Harrisburg, Pa. Owner, L. Silvert, Harrisburg, Pa. Brick, steel, 2 stories, 52x87 feet, composition roof, concrete and pine floors, freight elevators, city heat, electric light, tile work, rolled steel sash. Contract awarded to M. H. Gettys, 210 Mulberry street, Harrisburg.

**Bank (add.)**, Langhorne, Pa. Architect, Thomas Stephens, Temple Building, Camden, N. J. Owners, People's Bank, Langhorne, Pa. Stone, 2 stories, 20x45 feet, slate roof, oak floors, general interior alterations. Contract awarded to J. K. La Rue, Brightstown, Pa.

**Bank (alts. and add.)**, Lancaster, Pa. Architect, H. Y. Shaub, Imperial Building, Lancaster, Pa. Owners, Lancaster County Bank, care of architect. Brick, reinforced concrete, 1 story, 30x70 feet, composition roof, hardwood floors, electric light, metal window guards, rolled steel skylights. Contract awarded to D. L. Warfel, 908 East Orange street, Lancaster, Pa.

**Residence**, Kingston, Pa. Architect, Thomas Foster, Coal Exchange Building, Wilkes-Barre, Pa. Owner, R. E. Smith, 85 Hazel avenue, Wilkes-Barre, Pa. Brick, 2½ stories, 37x38 feet, slate roof, hardwood floors, electric work. Contract awarded to William Ansbery, 147 Barney street, Wilkes-Barre, Pa.

**School**, Frackville, Pa. Architect, J. J. Howley, Traders' Bank Building, Scranton, Pa. Owner, West Mahoney Township School Board, M. K. Coyle, Lost Creek, Pa. Frame, 1 story, (4) rooms, 59x77 feet. Contract awarded to Andrew Breslin, Summitt Hill, Pa.

**School**, Shenandoah Heights, Pa. Architect, J. J. Howley, Traders' Bank Building, Scranton, Pa. Owners, West Mahoney Township School Board, M. K. Coyle, secretary, Lost Creek, Pa. Brick, 1 story, (6) rooms, asbestos shingle roof, pine floors, steam heating, electric lighting. Contract awarded to E. R. Bastress Co., Mt. Carmel, Pa.

**Residence**, Scranton, Pa. Architect, G. T. Price, 110 Adams street, Scranton, Pa. Owner, E. Morosini, 2225 North Washington avenue, Scranton, Pa. Frame, stucco, 2½ stories, 28x28 feet, tile roof, hardwood floors, steam heat, electric light, metal lath. Contract awarded to Fred Klee, 1030 Paul avenue, Scranton, Pa.

**Garage**, Nanticoke, Pa. Architect, G. T. Price, 110 Adams street, Scranton, Pa. Owners, Zigmond & Butkiewci, Nanticoke, Pa. Brick, 1 story, 24x70 feet, slag roof, concrete floors, steam heat, electric light, rolled steel sash. Contract awarded to F. Collins, Nanticoke, Pa.

**Road Work**, Pennsylvania. Owners, Department of Highways, Harrisburg, Pa.

Somerset County, Route 52, A-1361, Boswell Borough. One course reinforced concrete. Contract awarded to C. J. Newman & Co., Boswell, Pa., \$23,010.30.

Fayette County, R-117, Everson Borough. One course reinforced concrete. Contract awarded to J. I. Dick, Scottdale, Pa., \$37,741.65.

Lancaster County, Route 138, Manheim Borough. One course reinforced concrete. Contract awarded to Swanger-Fackler Const. Co., Lebanon, Pa., \$43,580.20.

York County, A-2002, Shrewsbury Township and New Freedom Borough. Either bituminous surface course on concrete foundation or one course reinforced concrete. Contract awarded to W. C. Guncheon & Co., Harrisburg, Pa., \$57,602.30.

**Road Work**, Pennsylvania. Owners, Department of Highways, Harrisburg, Pa.

Northampton County, A-2557, Northampton Borough. Either bituminous surface course on concrete foundation or one course rein-

forced concrete. Contract awarded to General Paving Co., Allentown, Pa., \$42,352.15.

Delaware County, R-131, Middletown Township. Either bituminous surface course on concrete foundation or one course reinforced concrete, \$100,074.04. Contract awarded to Highway Const. Co., Land Title Building, Philadelphia.

Erie County, A-1467, Harbor Creek Township. Either bituminous surface course on concrete foundation or one course reinforced concrete. Contract awarded to Charles H. Fry Const. Co., Erie, Pa., \$110,629.30.

Greene County, R-268, Jefferson Borough. One course reinforced concrete. Contract awarded to Reed & Moore, Waynesburg, Pa.

## New Jersey Construction News

**Church**, Pacific and Maple avenues, Wildwood, N. J. Architect, Lynn Boyer, Wildwood, N. J. Owners, First Baptist Church, care of E. H. Fisher, Wildwood, N. J. Plans in progress. Too early for details.

**Church**, Poplar and Atlantic, Wildwood, N. J. Architect, Mark Reeves, Wildwood, N. J. Owners, Wildwood Lutheran Church, care of Paul J. Hoh, Wildwood, N. J. Plans in progress. Too early for details.

**Chapel**, Young's avenue, Wildwood, N. J. Architect, Mark Reeves, Wildwood, N. J. Owners, Colored Methodist Church, care of W. J. Delanny, Wildwood, N. J. Frame. Plans in progress. Too early for details.

**Apartment Building**, Pine avenue, Wildwood, N. J. Architect, Byron H. Edwards, 34 South Seventeenth street, Philadelphia. Owner, name withheld. Frame, 3 stories, 50x100 feet. Plans in progress.

**Stores (5) and Apartment Buildings (6)**, Pine avenue, Wildwood, N. J. Architect, Byron H. Edwards, 34 South Seventeenth street, Philadelphia. Owner, S. Lotuff, care of architect. Brick, stucco and concrete block, 2 stories, 65x100 feet. Plans in progress.

**Twin Residence**, Trenton, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owner, C. H. Bond, 249 Jackson street, Trenton, N. J. Hollow tile and stucco, 2½ stories, 48x33 feet, slate roof, hardwood floors, electric light. Plans in progress.

**Boarding and Administration Buildings**, Trenton, N. J. Architect, W. F. Thompson, 342 Madison avenue, New York City, J. O. Hunt, Trenton, N. J. Owners, Young Women's Christian Association, Trenton, N. J. Brick, steel, concrete, cut stone, administration building, 3 stories and basement, 133x74 feet and 70x50 feet, boarding school, 88x72 feet, 4 stories and basement (plumbing, heating and electric separate bids), promenade tile, slate and slag roof, concrete, composition cork tile, maple and oak floors, hollow tile, elevators, safety treads, metal weather strip, waterproofing and dampproofing, ornamental iron work and stairs, floor hardener, bond, kalamein doors, copper skylights, rolled steel sash, tile and marble work, metal lath, laundry equipment, refrigerator and kitchen equipment, dumb waiters. Architect taking bids due October 9th, 2 P. M.

**Grade School**, Paulsboro, N. J. Architects, Ritter & Shay, North American Building, Philadelphia. Owners, Board of Education of Borough of Paulsboro, N. J. Reinforced concrete, brick, cut stone, 2 stories and basement, 136x65 feet, steam heat, electric light, metal lath, bond, ornamental iron work, dampproofing, hollow tile, cement and maple floors, slate roof. Owners taking bids due October 12th.

**Public School**, Woodbury, N. J. Architects,

The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Board of Education of Woodbury, N. J. Brick, cast stone, cut stone, steel, reinforced concrete, 2 stories and basement, 191x64 feet, wing 174x74 feet, slag roof, maple floors, safety treads, roof ventilators, waterproofing, ornamental iron work, floor hardener, kalamein doors, sheet metal skylights, metal lath. Owners taking bids due October 4th.

**Yard Service Building**, Camden Terminal, Camden, N. J. Architect, Samuel T. Wagner, Reading Terminal, Philadelphia. Owners, Philadelphia & Reading Railway, Reading Terminal, Philadelphia. Brick, steel, 1 story, 13x89 feet, built-up asbestos roof, asphalt floors, electric light, hot water heat, bond, iron work. Owners taking bids due October 8th.

**Public School**, Pennsylvania avenue, North Wildwood, N. J. Architect, H. Rex Stackhouse, 1120 Locust street, Philadelphia. Owners, School Board of North Wildwood, N. J. Owners taking bids due October 11th, 7.30 P. M. Note extension.

## New Jersey Contracts Awarded

**Detention Rooms and Warden's Dwelling**, Toms River, N. J. Architect, J. P. Elkinson, Toms River, N. J. Owners, Ocean County Courts, Toms River, N. J. Brick and reinforced concrete, 2½ stories, 36x60 feet, concrete and slate roof, wood and concrete floors, hollow tile partitions, steam heat, electric light, metal lath, roof ventilators, metal window guards, floor hardener, terra cotta flues. Contract awarded to Charles C. Newman, Lakewood, N. J., \$18,700. Plumbing awarded to E. A. Smith, Toms River, N. J., \$1,215. Heating awarded to E. A. Smith, Toms River, N. J., \$1,259.50. Electric awarded to J. W. Brower, Toms River, N. J., \$313.

**Boiler House and Laundry**, Atlantic City, N. J. Associate architects, H. A. Stout, J. V. Mathis and J. H. Vaughn, Guarantee Trust Building, Atlantic City, N. J. Owners, Atlantic City Hospital, Mr. J. Moore, Atlantic City. Brick, concrete, steel, 2 stories, 50x55 feet, slag roof, concrete floors, electric light, rolled steel sash and skylights, fire doors, roof ventilators, waterproofing, dampproofing. Contract awarded to Samuel Headley, Guarantee Trust Building, Atlantic City, N. J.

**Psychology Building**, Princeton, N. J., \$100,000. Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Princeton University, Princeton, N. J. Brick, concrete, steel, 2 stories and basement, 35x128 feet, slag roof, cement floors, electric light, central heating plant, rolled steel sash. Contract awarded Matthews Const. Co., Princeton, N. J.

**Infirmary Building**, Princeton, N. J., \$300,000. Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Princeton University, Princeton, N. J. Reinforced concrete, stone, steel, bluestone, limestone, 3 stories and ground, 150x100 feet, slate roof, cement floors, linoleum, hollow tile, terra cotta, plumbing, ornamental iron work and stairs, bond, fire and kalamein doors, tile and marble work, electric light, steam heat. Contract awarded Matthews Const. Co., Princeton, N. J.

**Residence**, North Wildwood, N. J. Architect, Byron H. Edwards, 34 South Seventeenth street, Philadelphia. Owner, Adam Schlorer, care of architect. Hollow tile, stucco and brick, 2½ stories, 60x35 feet, asbestos shingle roof, oak and pine floors, metal weather strip, bond, tile work, hot water heat, electric light. Contract awarded Edward McGarry, Wildwood, N. J.

## Delaware Construction News

**Road Work**, Delaware. Owners, State Highway Department, Dover, Delaware.

Contract No. CK-17, 0.508 miles through Frederica. 1,200 cubic yards excavation, 50 tons broken stone base course, 890 cubic yards cement concrete pavement, 10 cubic yards Class A concrete, 200 pounds reinforcement, 60 lineal feet 12-inch R. C. pipe.

Contract No. 42-A, Seaford, Delaware. Temporary timber bridge, 120 feet long, 10 feet wide. Owners taking bids due October 17th at 2 P. M. Bond. Deposit of \$10.00 required (refunded).

### A NEW JOB FOR THE PUBLIC SCHOOLS

*Application of Apprentice Training  
Formula Will Scatter Many  
Perplexities of Construction  
Industry*

BY HARRY L. FIDLER,

*Vice-Chairman, Federal Board for Vocational Education*

"If I could be assured a steady supply of trained labor, one of the greatest hazards of my building operations would be removed," a prominent contractor recently told me.

His opinion reflects the present state of mind of the whole construction industry. The cost sheets of builders throughout the country are revealing the disturbing fact that in no other industry is labor turnover so rapid and so ungovernable. Everywhere there is a pressing desire for some plan which will stabilize the supply of labor. Everywhere there is disgust at the present hit-or-miss system of apprenticeship and labor training.

### "Has No Certainty"

"The building contractor today conducts his operations with no certainty that he can draw upon a dependable supply of skilled labor," my informant continued. "Instead, he is faced by a chronic feast or famine condition. During a boom period, he must contend with a shortage of skilled help, with the resultant pyramiding of labor cost and labor controversies. During a slack period he frequently carries unproductive workers on his pay roll, in order to be assured of sufficient competent workers in the next boom.

"If an attempt is made to augment the labor supply, the result will be to flood the trade with half-trained and incompetent journeymen, and the last condition will be worse than the first. The short of it is that we are suffering from a state of utter plainness is our labor policy. With the prospects good for several years of building shortage, and hence of forced operations, the condition can not but get worse, unless some plan is speedily evolved to meet it."

It is a melancholy picture, and yet every contractor will recognize most of its features as parts of his own experience. There is a very real problem confronting the industry and a very real demand for its solution.

### Labor Leaders Eager

Fortunately, the contractors are not alone in their desire for remedial action. If one talks to the more influential leaders of the trade unions, he will find the sentiment equally eager for some plan which will stabilize labor supply. Even though they are the beneficiaries of the present labor shortage, the trade unionists recognize that in the long run it will be to their interest to work out with the employers a more scientific apprenticeship system. It can be safely said that the unions today are ready to co-operate with the employers, as never before, in any sound apprenticeship training program which will not imperil the objectives of trade unionism. The unions are willing to make reasonable concessions to this end. They are anxious to secure those settled conditions of employment in the industry which will come from a regulated labor supply.

Both employers and trade unionists recognize that there is an emergency need for such action right now as a result of the operations of the present immigration act. The "3 per cent." act has confronted us with the necessity of training our own skilled workmen for the first time in American history. Formerly an annual influx of European craftsmen filled any shortages which arose in the skilled trades. Now this assistance is removed. We are thrown upon our own resources to recruit our skilled trades. In the building trades, the situation is especially acute, due to the coincidence of a housing shortage with the limitation of immigration. The Department of Commerce has recently estimated this housing shortage to total 700,000 homes. What is to be the answer to the problem?

### Obstacles In Path

Unhappily, the fact that both employers and unionists are manifestly ready for a new experiment is no guaranty of action. Past experience has shown that the most difficult task in all controversial labor matters is to bring the two sides together, in genuine good faith. Obstacles of mutual distrust and suspicion must be surmounted. The sincere desire to reach a common understanding, and if necessary to make concessions to that end, must be present. Without the intervention of a third party, representing the general public, in whose disinterestedness both employer and employee have full trust, agreement is often difficult to reach. In this problem of apprenticeship

reorganization the need of such an intermediate agency is patent.

It is my belief that the answer to the apprenticeship problem is to be found in the public school. Already, under the Federal Vocational Education act, the basis for a part-time training system has been authorized and established. By giving to the public school the responsibility, in co-operation with the employers and the unions of administering apprenticeship training, we can set up an impartial training agency, acceptable to both sides. By setting up a supervisory board in which the employers, the unions, and the public schools are equally represented, the full co-operation of each group is assured to the enterprise. Indeed, it is difficult to see any other agency than the public school which could thus bridge the gap between capital and labor and unite them in a common workable program.

#### *Results Already Gained*

The suggestion is not made without experience. Already in various cities employers and unions in branches of the building trades have taken advantage of the public vocational school system for apprenticeship training.

Perhaps New York City has taken the most noteworthy steps in this direction. In January, 1922, the New York Building Congress, composed of both the organized employers and the unions, created an apprenticeship commission to promote the development of apprentice training in the building trades. This body recently reported that through its efforts 750 boys were placed in training last year, while 250 more will soon be added. To further the work, the New York Building Trades Employers' Association has recently donated the amount of \$25,000 to the commission. In all its efforts the commission has had the unstinting support of the trade unions and it has succeeded in finding a basis of satisfactory co-operation for both employers and unions in its program.

The agency employed by the commission to this end has been the public vocational school. A typical apprenticeship plan developed in New York has been in the carpentering trade.

According to this plan, a four-year apprenticeship period is prescribed, divided into eight terms of six months each. The apprentice, in addition to his regular working hours, is required to spend four hours per week in the evening vocational school. The union enforces his attendance. For these four hours the employer during the first half year allows him one-half of his regular hourly wage rate. At the end of each six-month term the apprentice is required to pass a written and oral examination covering his progress during the period.

Upon successful passage of the examination, his wages are regularly advanced. Thus, for the first six months' period he receives a wage of 30 percent. of the journeyman's minimum; second, six months, 35 percent.; third, 45 percent.; fourth, 50 percent.; fifth, 60 percent.; sixth, 65 percent.; seventh, 75 percent.; eighth, 80 percent.; ninth, beginning journeyman's wages. Continuous employment to the apprentice is guaranteed by the general apprentice commission, and by the carpenter's joint committee. This plan is working out with general satisfaction to both employers and unions.

While the carpenters were the first trade to act under the new commission, a part-time apprenticeship training arrangement with the public schools has subsequently been agreed upon by the employing painters and decorators and by Painters' District Council No. 9 of the A. F. of L. A third trade to utilize the New York public schools is the brick-laying trade, which has recently arranged to place 115 apprentices in specially organized vocational classes. Other building trades have promised to follow. Obviously New York has started an educational movement which will rivet the attention of the nation upon the public school as an agency for apprentice training.

#### *Progress in Other Cities*

However, other cities have been equally forward in the new program. Similar instances could be multiplied.

The experience of these scattered pioneer attempts indicates, to my mind, the formula upon which successful apprenticeship training can be organized in nearly all communities where union organization in the building trades obtains. That formula is voluntary co-operation between employers and unions, through the agency of the vocational public school. Under the provisions of the Smith-Hughes Act, adequate Federal and State vocational money is available for this work. The only obstacle in most communities which deters action is the inertia of the interested groups. The initiative for such education must come from the trade itself. But whenever employers and employees are willing to sincerely join forces for this program, the public schools stand ready and eager to co-operate.

It is my opinion that the application of this new apprentice training formula on a nation-wide scale will go far toward resolving the present perplexities which the trade is facing. Those of us who are actively engaged in the work are equally convinced that ultimately public school apprentice training will accomplish the stabilization of labor supply which both employer and employee are seeking.

Unquestionably the present beginnings are steps toward a vital goal.—*The Constructor*.

#### SOME EVERYDAY PROBLEMS IN RADIATION\*

One of the first demonstrations in heat radiation given in courses of elementary physics is the "Melloni cube" which consists of a cubical metal box of hot water, having one face brightly polished and the other faces covered with lacquer, lamp black, or other paints. By means of a thermopile, it is shown that the intensity of the thermal radiation emitted by the bright metal surface is much less than that emanating from the surfaces which are covered with a nonmetallic paint.

The process of heat transfer by conduction through a solid medium, such as, for example, the walls of a steam radiator, is a molecular vibration. At the surface, part of this heat is transferred by thermal conduction to the surrounding air, which thus becomes heated and, by convection, is distributed throughout the room. Part of the heat transferred as a molecular vibration in the metal is transformed into an etherial vibration at the surface, and is transmitted through the room as radiant heat.

The experiments with the Melloni cube show that the bright, uncontaminated metal surface offers a much greater resistance to the transformation of the molecular vibration into the etherial vibration than does a nonmetallic coating applied to this same metal surface.

The experiment with the Melloni cube has, therefore, two applications, depending whether we desire to (1) *suppress* or (2) *facilitate* the process of heat radiation.

My experiments have been concerned primarily with the suppression of radiation from flat surfaces, such as, for example, the underside of a roof or a tent, the inside of a metal wall, etc., which are exposed to the sun.\*\*

The manner of making the test is extremely simple. Duplicate samples of the same material, for example tent cloth, balloon hangar roofing, fabrics for automobile tops, or ordinary sheet iron, are selected. The under (or upper) side of one sample is coated with aluminum.

\*Furnished by Department of Commerce Bureau of Standards, and written by Dr. W. W. Coblentz, *Architecture and Building*.

\*\*The amount of heat carried away by air convection has not been measured. In the case of a steam radiator, which consists of a number of segments, the heating by air convection is probably more important than the heating by radiation.

These two samples are then mounted upon a suitable holder and exposed to the sun.

After the two samples are thoroughly heated by the sun's rays, the intensity of the heat radiated from the underside of each one is measured by means of a sensitive thermopile, which is mounted directly under the sample.

The comparison of the radiation intensity of the painted and unpainted samples requires only a few minutes, and hence there is no difficulty in obtaining high accuracy.

#### 1. *Aluminum Paint is a Ready Means for Suppressing Radiation Tents, Awnings, etc.*

In coverings of white cotton cloth such as used for tents, awnings, etc., in addition to the heat re-radiated from the under side, as the result of warming by solar radiation, there is some sunlight transmitted directly through the fabric.

By coating the under side of the cloth with aluminum paint, it was found that heat radiated from the under side was reduced by 86 per cent. Painting the outside of the cloth appeared to be slightly less effective, the heat radiated from the under side being reduced only 80 per cent.

However, whether the coating is applied on the inside or the outside, there will, no doubt, be many instances where the possibility of shutting out four-fifths of this heat radiation is worthy of consideration.

Coverings of conveyances, such as for example the tops of automobiles, ice wagons, etc. consist of cloth "artificial leather," the black composition of which absorbs perhaps 90 per cent. of the sun's rays. Practically half of this is re-radiated from the under side of the cloth.

Samples of "artificial leather" having the outside covered with a coating of aluminum paint emitted only 25 to 30 per cent. as much heat radiation from the under side as the uncoated samples.

When the aluminum paint was applied on the under side, which is rough-woven, the heat emitted (from the under side) was 40 to 45 per cent. that of the unpainted sample.

From this it appears that, by applying the aluminum paint to the smooth outside of this fabric, the heat radiated from the under side will be reduced by 70 to 75 per cent.

A cypress shingle, one-half inch in thickness, having a coating of aluminum paint on the under side, emitted only 43 per cent. as much (from the under side) as an uncoated shingle of the same thickness. Similar tests on a one-inch cypress board showed practically no difference in emissivity. Evidently in thick coverings of wood, the question of painting is un-

important. This is owing to the poor heat conductivity of the wood.

On the other hand, painting the under side of a sample of the Johns-Manville asbestos roofing with aluminum paint reduced the heat radiation from the under side by 50 per cent. which is an important question in the design of balloon hangars, etc.

The automobile top is mentioned merely as one of numerous applications that can be made of aluminum paint in suppressing heat radiation from entering an enclosure which is desired to keep cool. It is a simple expedient, easily applied.

#### 2. *On Increasing the Emissivity of Steam Radiators*

For esthetic reasons, and also because it seems the custom, the steam radiators used in heating buildings are usually painted with aluminum or bronze paint. From a viewpoint of obtaining the maximum amount of heat from a radiator, of a given size, this is one of the most inefficient paints that can be applied.

Tests were made on the emissivity of sheetiron covered with white paint, glass enamel, aluminum paint, etc. The results obtained show that the aluminum paint emits only 27 to 30 per cent. as much as a non-metallic paint or glass enamel.

From this, however, we must not jump to the conclusion that the ordinary steam radiator can be made to emit three times as much heat by applying a coat of non-metallic paint. As stated in the beginning, the ordinary steam radiator is so constructed that the room becomes heated principally by thermal conduction and convection of the air which circulates over and between the sections of the radiator.

Allen† (Electrical World, Vol. 57, p. 1616; June 22, 1911) made tests on radiators coated with various substances, such as aluminum and copper bronze, terra cotta enamel, white paint, etc.

Out of about two dozen tests on various paints, he found that the aluminum and copper bronze coverings always diminished the heat dissipated by 24 to 28 per cent. below that of the non-metallic paints. In consequent tests (Jour. Amer. Soc. Heat. & Vent. Eng., 26 March, 1923) the values obtained were 17 to 20 per cent. below that of the non-metallic paints. Merely covering the aluminum paint with a coat of terra cotta enamel increased the heat transmission by some 28 per cent. This would seem to indicate that in a radiator consisting of a number of sections, the heat carried away by convection between the sections is a large percentage (Allen's values range

†The late John R. Allen, Professor of Mechanical Engineering University of Michigan.

from 50 to 73 per cent., depending upon the type of radiator) of the total heat given out, and that the heat lost by radiation from the sides of the radiator is relatively of secondary importance.

Hence, the use of a covering which is an inefficient emitter of the thermal radiation is not so serious as it would appear from our tests.

However, a gain of even 15 to 20 per cent. in heat dissipation into the room, by using a non-metallic covering, is worth considering. By non-metallic paint is meant any covering which does not have the pure metal flakes, such as bronze and aluminum. The various pigments offer a great variety of tints for decorative purposes with greater efficiency in heat dissipation.

In conclusion it may be added that it is unnecessary to remove the old coat of aluminum paint before applying the coat of non-metallic paint.

It is beyond the scope of this paper to attempt to mention the numerous applications of data of this type. Suffice it to add one or two instances of saving in fuel by reducing the loss in heat by radiation from the object which is being heated. Take, for example, an ordinary kitchen utensil, e. g., an aluminum tea kettle which is easily tarnished by contact with a gas flame. Removing the tarnish greatly shortens the time in which water can be brought to boiling by reducing the radiation from its sides. This is one of the little things but they all count in the month's gas bill.

Another example worth citing was given me by a former colleague interested in the manufacture of Portland cement. By applying a coat of aluminum paint to the outside of the kiln, he was astonished to find that the saving of fuel could be measured in tons of coal.

W. W. Coblentz.

**Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.**

**All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.**

**Many a man would do a better job if he didn't know about putty.—Ex.**

### Build with or Specify **ASHLAND CONCRETE WALL TILE**

A High Grade Building Unit

Approved by Phila. Building Dept.

**B**RICKLAYERS like to lay it. They don't have to lay down the trowel, and one tile is equal to six bricks, which is laid almost as quickly as one brick.

In addition to the ease of handling, there is also the important advantage to the builder or owner of quick source of supply and a large stock available for prompt delivery.

There are many advantages compared to brick. It is an excellent base for stucco or plaster, and is even attractive enough to be used without stucco for any type of building.

## As The Editor Sees It

### REPORT ON THE ANNUAL MEETING OF THE AMERICAN CONSTRUCTION COUNCIL, NEW YORK, SEPTEMBER, 1923

The first annual meeting of the American Construction Council, following the organization meeting that took place in Washington in June, 1922, was held in New York City on Friday and Saturday, September 21st and 22nd, 1923. At its sessions some of the most pressing problems awaiting solution by the industry received practical consideration.

The meeting of the Council itself, following a meeting of the Board of Governors at the home of President Franklin D. Roosevelt in the morning which was attended by 35 members of the Board and the public, was opened by a note of welcome from President Roosevelt in which he expressed his faith in the great usefulness of the Council and its field of constructive activity for the future, which was read before the Council by Vice President John E. Lloyd, of Philadelphia. The Executive Vice President, Mr. D. Knickerbacker Boyd, served as general chairman. Executive Secretary Dwight L. Hoopingarner transmitted to the meeting the regrets of the Secretary of Commerce, Hon. Herbert Hoover, to President Roosevelt at his inability to be present, and messages of appreciation and support from others who found it impossible to be present. Mr. Boyd

then delivered an address as Executive Vice President of the Council in which he reiterated the purposes for which the Council had been formed and the major lines of activity along which it should operate.

Among the problems discussed were Local Autonomy and National Organization in the Construction Industry (How the American Construction Council should aid in the promotion of and co-operation with local building congresses); Apprenticeship, Vocational Guidance and Craftsmanship in the Construction Industry; Reduction of Unemployment in the Construction Industry; the American Construction Council's Program on Research; and What the American Construction Council Can Do to Help the Various Branches of the Industry.

Throughout the discussion emphasis was placed upon movements in actual existence or plans definitely being inaugurated by the various agencies throughout the industry and by the Council itself. Thus matters pertaining to the organization and actual operations of building construction congresses in New York City, Boston, New Jersey, Philadelphia, and Portland, Oregon, were given special attention by the speakers, the formal discussion on which was presented by Mr. Harry T. Stephens, President of the New Jersey Building Congress, Mr. Richard A. Wolff, Secretary of the New York Building Congress, Mr. James M. Gauld,

Vice President of the Boston Building Congress, and Col. F. M. Gunby, of the Boston Building Congress, with letters and papers from others.

Likewise Apprenticeship, Vocational Guidance and Craftsmanship received concrete presentation by Fred F. Moran, Managing Director of the Apprenticeship Commission of the New York Building Congress; Dr. J. C. Wright, Director of the Federal Board for Vocational Education; George Dautel, Chairman of the Apprenticeship Committee for Bricklayers, Cleveland, Ohio; James M. Gauld, Vice President of the Boston Building Congress, and Col. F. M. Gunby, of the Boston Building Congress, and others.

Reduction of Unemployment in the Construction Industry received attention through a paper by Mr. A. P. Greensfelder, Vice President of the Associated General Contractors of America, St. Louis, and an address by Dr. John M. Gries, Chief of the Division of Building and Housing of the U. S. Department of Commerce.

In each case there was open discussion from the floor, participated in by numerous other persons, and the appropriate committee of the Council itself made announcement as to the activities and plans of the Council for action along the respective lines, among which was the report of Mr. F. W. Walker, Chairman of the American Construction Council's Com-

mittee on Apprenticeship, Vocational Guidance and Craftsmanship, and the report of Mr. D. Knickerbacker Boyd, Chairman of the American Construction Council's Committee on Seasonal Unemployment. Rotating chairmen were chosen to preside for each topic, Frank C. Wight, of the *Engineering News Record*, presiding for the subject of Building Congresses, Dr. J. C. Wright, of the Federal Board for Vocational Education, presiding for the subject of Apprenticeship, W. E. Welch, of the American Society of Safety Engineers, presiding for the subject of Reduction of Unemployment, and Dwight L. Hoopingarner, Executive Secretary of the Council, presiding for the subject of What the American Construction Council can do to Help the Various Branches of the Construction Industry.

The Council's Program on Research was presented by Dwight L. Hoopingarner, speaking as Chairman of the Council's Committee on Public Information and Research, to the effect that the services of the Committee and the administrative resources of the Council are at the disposal of the industry for the prosecution of research along any and all lines that are of mutual and proper interest to the Council and the industry as a whole and for which resources might be available.

At the dinner meeting held at the Hotel Commodore on Friday evening, at which Wright D. Goss, President of the Empire Brick and Supply Company, acted as toastmaster, a searching analysis of the Council's general field of endeavor was made by Mr. E. J. Brunner editor of the *American Contractor*, of Chicago who was the speaker for the occasion. In his remarks Mr. Brunner vividly pictured the enormous field of opportunity for the Council, made up as it is by voluntary action of all elements in or affecting the industry and yet starting without the handicaps of habit and tradition in such an endeavor. At the same time, he pointed out the necessity of proceeding along paths carefully projected and of mutual interest.

There was no more significant phase of the program than that of the evening session pertaining to What the American Construction Council Can Do to Help the Various Branches of the Construction Industry, which was participated in officially by the presidents or other representatives of about twenty or more of the leading national organizations interested in the construction industry, who set forth the problems confronting their branches of the industry on which the American Construction Council can render help. Among those who participated in this discussion were:

Dean F. Paul Anderson, of the American Society of Heating and Ventilating Engineers,

M. T. Bannigan, President of the National Builders' Supply Association,

C. T. Bissel, of the National Board of Fire Underwriters,

Francis Blossom, of Sanderson and Porter,

Thomas D'A. Brophey, of the Copper & Brass Research Association,

Adelbert E. Coleman, President, National Assn. of Building Trades' Employers,

J. W. Cowper, President, Associated General Contractors of America,

Edward E. Duff Jr., Secretary, National Paving Brick Manufacturers' Association,

R. C. Gaskill, of the Atlantic County District Council of Carpenters,

James M. Gauld, Labor Representative on the Boston Building Congress,

F. M. Gunby, of the Boston Building Congress,

G. A. McGarvey, of the Federal Board for Vocational Education,

R. C. Marshall, Jr., General Manager Associated General Contractors of America,

Joshua L. Miner, of the Concrete Products Association,

M. W. O'Brien, of the National Association of Marble Dealers,

Harry T. Saunders, of the National Association of the Real Estate Boards,

W. W. Schupner, Secretary of the National American Wholesale Lumber Association,

H. T. Stephens, of the American Institute of Architects,

M. M. Upson, of the American Concrete Institute,

W. E. Welch, Past President of the American Society of Safety Engineers,

J. C. Wright, Director of the Federal Board for Vocational Education.

In brief, the great opportunity for constructive service by the Council was evidenced in the pledges for support and the discussions throughout the various sessions. Aside from the general attendance, delegates were present from the twelve constituent groups of the Council: Architects, Engineers, General Contractors, Sub-Contractors, Construction Labor; Material and Equipment Manufacturers; Material and Equipment Dealers; Financial, Surety, Bonding, Real Estate, Accounting, Insurance, Building and Loan Organizations, Chambers of Commerce, and Boards of Trade; Public Utility Construction Departments; Representatives of Federal State, County and Municipal Bureaus or Departments concerned with Construction; National Associations of Builders' Exchanges, Building Trades Employers' Associations, and similar Associations or Federations of Building interests; and the Public.

Indicative of the Council's affirmative action along some of the more important lines are the resolutions passed at the an-

## New Jersey Construction News

**Sales and Service Station**, Haddon avenue, Camden, N. J. Architect, A. B. Gill, 328 Market street, Camden, N. J. Owner, name withheld. Brick, 1 story, 40x65 feet, cement floor, steam heat, slag roof. Plans in progress.

**Residence (alts.) to Apartment**, Trenton, N. J. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owner, N. A. K. Bugbee, 206 East Hanover street, Trenton, N. J. New store front, partitions, electric work, hardwood floors, general interior alterations. Plans in progress.

**Store and Apartment**, 717 Broadway, Camden, N. J. Architect, A. B. Gill, 328 Market street, Camden, N. J. Owner, Charles Swartley, care of architect. Brick, 2 stories, 15x96 feet, hot water heat, tile work, hardwood floors. Plans in progress.

**Operation of Residences**, Thirty-second and Westfield avenue, Camden, N. J. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owners, Hitchner & Todd, 2623 Westfield avenue, Camden, N. J. Brick, 2 stories, 18x32 feet, 16x40 feet, slag and tin roof, electric light, hot water heat, metal lath, tile work, cement work, garages in basement. Plans in progress. Owner will take sub-bids in 3 weeks.

**Residence**, Atlantic City, N. J. Architects, Druekenmiller & Williams, 1537 Chestnut street, Philadelphia. Owner, Louis Burk, Third and Girard avenue, Philadelphia. Frame and plaster, 2½ stories, 35x41 feet, 6 inches, shingle roof, tile and pine floors, plumbing, tile and marble work, electric light. Architects taking bids due October 15th.

**Sewage Disposal Plant**, Morris Plains, N. J., \$73,500. Architects, Department of Institutions and Agencies, Division of Architecture and Construction, Trenton, N. J. Owners, State Hospital, Morris Plains, N. J. Tanks (4), reinforced concrete, 225x160x6 feet; walls, 18½ inches; house, brick, 1 story, 26x18 feet, slate roof; (4) sand beds, 59x204 feet, underdrained with tile pipe 12-inch open joint vit. T. C., wood troughs, 1 main, 4 laterals. Architects taking bids due October 18th.

**Church**, Moorestown, N. J. Architect, George I. Lovatt, 420 Walnut street, Philadelphia. Owners, Our Lady of Good Council Roman Catholic Church, Rev. J. B. Hend-

rick, Moorestown, N. J. Brick, lath, 53x88 feet, steam heat, electric light, metal lath, slate roof, iron work. Architect taking bids due October 11th, 9.30 A. M.

**Residence**, Trenton, N. J. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owner, Frank Russo, Bellevue and Hermitage avenues, Trenton, N. J. Brick, 2½ stories, 36x24 feet, slate roof, hardwood floors, steam or hot water heat, electric light, tile work. Owner will build.

**Residences (3)**, Trenton, N. J., \$3,600 each. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owner, Frank Russo, Bellevue and Hermitage avenues, Trenton, N. J. Brick, 2½ stories, 32x44 feet, slate or tin roof, pine floors, hot water heat, electric light. Owner will build.

**Public School**, Woodbury, N. J. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Board of Education, Woodbury, N. J. Brick, cut stone, cast stone, reinforced concrete, steel, 2 stories and basement, 191x64 feet, wing 174x74 feet, slag roof, maple floors, metal lath, sheet metal skylights, kalamein doors, bond, floor hardener, iron work, safety treads, roof ventilators, waterproofing. Low bidders: T. M. Gibbs Const. Co., 215 South Broad street, \$296,983; Turner Const. Co., 1713 Sansom street, Philadelphia, \$307,840. Plumbing, William Newell, 1707 Sansom street, Philadelphia, \$14,866. Electric, Enterprise Electric Co., 239 South Tenth street, Philadelphia, \$11,399. Heating, J. H. Hutchinson, 1020 Callowhill street, Philadelphia, \$38,961.

**Y. W. C. A. Building**, Hanover street, Trenton, N. J. Associate architects, William Thompson, 342 Madison avenue, New York, and J. O. Hunt, Hunt Building, Trenton, N. J. Owners, Y. W. C. A., Mrs. Edward Dunham, 365 West State street, Trenton. Architects taking bids due October 17th. Note extension.

## New Jersey Contracts Awarded

**Extension to Building No. 31**, Camden, N. J. Architect, private plans. Owners, McAndrews & Forbes, Camden, N. J. Brick, steel, 1 story, 181x67 feet, slag roof, cement floors, rolled steel sash and skylights, fire doors, ornamental iron work. Contract awarded to Barclay White Co., 1713 Sansom street, Philadelphia.

**Office Building**, 226 Chester avenue, Moorestown, N. J. Architect, A. B. Gill, 328 Market street, Camden, N. J. Owner, The Moorestown Chronicle, Moorestown, N. J. Brick and hollow tile, 2 stories, 30x24 feet, slag roof, hardwood floors, hot water heat. Contract awarded to Richard Aitken, Moorestown, N. J., \$7,000.

**Store**, 2503-05 Federal street, Camden, N. J., \$19,000. Architect, A. B. Gill, 328 Market street, Camden, N. J. Owner, Louis Kotlikoff, 2507 Federal street, Camden, N. J. Brick, 2 stories, 40x90 feet, slag roof, pine floors, hot water heat, electric light, tile work, roof ventilators, skylights. Contract awarded to Wesley H. Bauck, 154 North Twenty-fourth street, Camden.

**Apartment (alts. and add.)**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owner, Dr. William J. Hall, 438 East State street, Trenton, N. J. Brick, 3 stories, 34x60 feet, slag roof, hardwood floors, electric light, tile work. Contract awarded to J. H. Morris & Co., 211 North Montgomery street, Trenton, N. J.

**Residence**, Division street, Trenton, N. J., \$10,000. Architect, private plans. Owner, Edward Reeger, 1423 South Broad street, Trenton, N. J. Brick, 2½ stories, 14x42 feet, slate roof, pine floors, hot air heat, electric light. Contract awarded to G. H. Angel, Trenton, N. J.

**Store and Apartment (alts.)**, South Warren street, Trenton, \$5,000. Architect, private plans. Owner, Edward Reeger, 1423 South Broad street, Trenton, N. J. General interior alterations. Contract awarded to G. H. Angel, Trenton, N. J.

**Residences (2)**, Trenton, N. J., \$8,000. Architect, private plans. Owner, T. A. Welger, 24 Garfield avenue, Trenton, N. J. Brick and frame, 2½ stories, 28x49 feet, slate roof, hot water heat, electric light. Contract awarded to A. J. Geiger, 505 Dayton street, Trenton.

## Miscellaneous Construction News

**Garage**, South side Road street, East of South Swan street, Albany, N. Y. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, E. B. Stratton Motor Co., Inc., Albany, N. Y. Reinforced concrete and steel, 3 stories, 118x139x95 feet, 6 inches, slag roof, cement floors, elevator, sprinkler system, rolled steel sash, electric work, plumbing, heating and ventilating plant. Plans in progress. Architects taking bids due Oct. 22nd at noon.

**Garage (add.)**, Hagerstown, Md. Architect, H. E. Yessler, Schmidt Building, York, Pa. Owners, Ludwig Motor Co., Hagerstown, Md. Brick, steel, 2 stories, 80x175 feet, concrete floors, steel trusses, rolled steel sash, floor hardener. Plans in progress.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., October 3, 1923. Sealed Proposals will be opened in this office at 3 P. M., November 5, 1923, for the construction of a one-story brick and tile non-fireproof Post Office building, approximately 62 by 64 feet in size, at Hoosick Falls, N. Y. Drawings and specifications may be obtained from the Custodian of the site at Hoosick Falls, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., Oct. 6, 1923. Sealed proposals will be opened in this office at 3 P. M., Oct. 29, 1923, for construction of concrete sidewalks, curbs, and

(Continued from Page 644)

nual meeting of the Board of Governors, held in conjunction with the meeting of the Council itself, which are as follows:

### 1. Construction Congresses

Recognizing the need of promoting the organization of local building construction congresses throughout the various construction centers of the country where none already exist and with the desire to cooperate in every appropriate manner with such congresses as already exist in the establishment of others, the Board of Governors of the American Construction Council herewith authorizes the expenditure of such sum as may be available up to \$25,000.00, to be used in the promotion of this work; and the Board requests the officers of the Council to utilize its administrative resources in every way possible in the furtherance of this program.

### 2. Apprenticeship

With the desire of furthering a sound and adequate program of apprentice training for the construction industry and of co-operating in every way possible with the present bodies who are directing their efforts in this field, and who are or in the future may be, inaugurating and conducting agencies for such training, the Board of Governors of the American Construction Council hereby requests the officers of the Council operating especially through its Committee on Apprenticeship, Vocational Guidance, and Craftsmanship, to co-operate with employees' and employers' organizations, building congresses, and all other elements in the construction industry, and with the educational bodies, local and national, in providing for apprenticeship which will be attractive to young men and will afford the fullest means for the employment and training of efficient workers as apprentices, and will produce the skilled workmen needed in the construction industry; and the Board further authorizes as the first essential step in this program the making of a national survey on apprenticeship needs and conditions of labor supply throughout the construction industry through the appropriate agencies of the Council co-operating with all organizations within the industry.

### 3. Statistical Program

Earlier in the year the American Construction Council called attention to the necessity for securing at regular intervals adequate data that would give the public information which it could use as a barometer of present and anticipated

volume of construction by important districts throughout the country. By securing such facts it is the thought that the peaks and valleys in construction activities, which have effects of such a serious nature upon every person in any way connected with the industry, either in contemplating and executing a project or as an owner, would by careful planning be reduced in so far as possible. The need for such information has become all the more apparent with the rapid expansion of the industry in its many angles and the desirability of co-ordinating its activities toward a better stabilization of the industry itself. The administrative machinery and the budget required to put into effect a program to accomplish these ends from the very nature of things would be very substantial in size.

After an extended and exhaustive survey of the field and of existing agencies for securing statistics on the construction industry, the Board of Governors of the American Construction Council has decided to defer action by the Council itself on a general program in this regard until such time as may be practicable, without duplication of effort, in expediting the collection interpretation, and dissemination nationally of data applicable locally and at present not readily available to the general public.

The Board of Governors further authorizes and directs its Executive Committee to keep in touch with condition pertaining to construction throughout the various districts of the nation, and if in its judgment a crisis arises in construction activities, to convene as many members of the Board as possible and issue a statement to the public for its information regarding same, recognizing in its action conditions applicable to the different localities.

### Statement of the Ownership, Management, Circulation, etc.

Statement of the ownership, management, circulation, etc., of The Builders' Guide, published weekly at Philadelphia, Pa., required by the Act of August 24, 1912, for October 1, 1923.

Sworn and subscribed before me this 23rd day of September, 1923.

Hugh Roberts, Notary Public.

(My commission expires April 15, 1925.)

A great deal of the investment in any soft coal mine is the outlay for houses and other buildings needed for the community. A questionnaire addressed to a number of companies, scattered through Pennsylvania, Kentucky, West Virginia and Ohio, by the Minter Homes Corporation, of Huntington, W. Va., which builds whole industrial communities revealed that the average investment in houses for miners is slightly more than 29 percent., running from as low as 8 percent. in only two cases to as high as 50 percent.

The operators, to whom the questionnaire were sent, were asked also to designate what they considered the ideal amount of capital that should be put into houses for the miners. The lowest figure given was 12 per cent., with many operators naming 50 per cent. of the total investment. The average was slightly more than 35 percent.

This is not profitable investment from a money point of view, but has its return in reducing the turnover of labor and keeping the miners and their families contented and happy. The rentals charged to the workmen are so low, when the companies own the houses, that in some cases the return is not enough to balance depreciation, insurance and tax charges. Where any return was received at all, the highest amount was 3½ per cent., and the average for a number of companies showing some return on this outlay of money only 1.14 per cent.

Houses alone are not the only buildings in which money must be invested in operating a soft coal mine. Schools, churches, moving picture theatres, community buildings and the like often have to be erected by the coal operators, or they will not exist at all. The questionnaire developed that as high as 18 per cent. of the total capital outlay of one coal company went into such buildings, while the average for a number of widely scattered companies was more than 8 per cent.

The operators were nearly unanimous in answering that homes of the bungalow type were the ideal for mining communities, only a negligible number reporting that two story houses had proved more suitable. Four-room bungalows were particularly favored.

Better houses means bigger tonnages of coal mined by each man, according to the answers of three quarters of the operators questioned. The coal mined in a month for each four room house in mining communities were secured also, running from as low as 80 tons to as high as 250 tons in several instances. The average amount mined was 165½ tons.

The impractical dreamers are not the architects, but the clients themselves, as a rule.

## CONTRACTORS' ASSOCIATIONS' ACTIVITIES IN THE REDUCTION OF ACCIDENTS\*

RALPH A. MACMULLAN, *Secretary, General Builders' Association of Detroit, Mich.*

To some of you I presume this talk will be largely repetition of previous messages to the National Safety Council from the General Builders' Association of Detroit. Our association was very enthusiastic and active in the formation of the construction section at St. Louis, and since then we have been diligent in our attendance at the subsequent conventions at Cleveland, Milwaukee, Boston, Detroit and now at Buffalo. We believe that since "eternal vigilance is the price of success," what might be regarded as repetition may properly be understood as confirmation of our conviction that safety methods for the construction industry are not only humanitarian, and economically correct, but practically obligatory after you become convinced, as we are, that organization along this line and the control of accidents is the surest and most indispensable step toward efficiency of production, and efficiency of production is necessary in the present situation of labor shortage.

The General Builders' Association of Detroit is composed of seventeen members who have become so completely sold on the subject of accident safety and prevention that they are imbued with the common interest of working together in complete co-operation. The Association has a safety committee composed of one man from each member firm, the secretary of the association, the insurance representative, and the chief inspector. This committee holds periodical meetings, both regular and special, for discussion of all matters that have to do with safety. The scope of its deliberation is broad enough to include amendments to the compensation law, important decisions on the subject of public liability, owners' and contractors' contingent liability, the subject of equipment, materials and methods of handling them, and the like. It was this committee that actively prepared, approved and adopted the safety code of the General Builders' Association of Detroit, which has been used as a creed by our members and with which many of you are familiar because it has been republished and distributed rather generally throughout the United States and Canada.

To promote familiarity with our safety code and its intelligent application to safety problems on the jobs, our association appropriates, each year, a sum of

money to be expended in bi-monthly installments as prizes for the best answers to questionnaires embracing ten questions that are distributed among superintendents, foremen and others on the jobs. These prizes range from \$15 down to \$1, with additional prizes given for helpful suggestions whether they apply to the code or not.

### *Keep Abreast of Latest Methods*

The result of this questionnaire has been exceedingly gratifying and indicates that men on the job are very much interested in helping their own situation, to say nothing of the helpful propaganda of convincing the employees that their employers are actively interested in them, as evidenced by the attempt to save life and limb and preserve the men to their jobs. We cannot afford to overlook any possibility of betterment of our safety work by suggestions from the men actually on the job, and, further, the very thought given by the men to suggestions gives them what might be termed a "safety consciousness" whether their particular suggestion is of value or not.

The program of our safety committee is one of constant change to keep abreast of the best and latest practices and methods and particularly designed so that the subject shall not become commonplace or stale, and naturally is too extensive to permit of detailed reference here. One of the first and best details of that program, however, is the practice at times of holding periodical first aid classes showing practical methods of caring for accident cases and the education of one of the foremen or superintendent on each job in first aid work as well as that feature, perhaps more important, of impressing the participants with the conviction that an accident is a mighty good thing to prevent before it happens, and, how to minimize the result of it when it does occur.

A valuable adjunct to the work of the safety committee is our welfare department wherein a trained nurse visits the home of each workman whose injury requires hospital attendance. This nurse prepares a form provided for the purpose in which is noted information relative to the size of the family and general information about home conditions. If need of special financial or other help is indicated by the information gathered, we proceed from that point according to the merits of the case. Thus, a woman is given the task of breaking the news of the accident to the family of the injured workman, as only a woman can do. Next, the nurse visits the hospital and informs the patient that she has been to his home and has rendered such comfort and aid as has been necessary, and gives the patient such assurance that he is relieved from worry about his family and home.

In case of an accident of more than

ordinary gravity on any job, whether it be attended by severe results or results only potentially severe, the association convenes a board of inquiry consisting of the secretary, insurance representative, the chief inspector and the safety committee man in the employ of the member firm on whose job the accident occurred. As soon as practicable after the accident, the board visits the job, whether it be in Detroit or elsewhere, and takes informal testimony from eye witnesses, the injured workman, if possible, the foreman and superintendent. I use the word "informal" because we invariably begin by stressing the fact that all present are there for the purpose of discovering how such conditions may be promoted as will effectually prevent a repetition of such an accident and therefore they may all speak freely. The effect of this practice is very excellent in many ways, particularly in re-establishing confidence and, therefore, efficiency on that job.

### *Co-operate With Council and U. S. Department of Labor*

All of the foregoing will indicate to you that the systematic methods that we have developed and adopted for the control of accidents have resulted in a sort of unwritten book of standard rules and processes among the association members, and the various jobs of each member. Standard methods, plus discipline, its first cousin, must surely result in efficiency, and it follows just as naturally that efficiency based on organization and system makes for minimum accident occurrence. This, in a word, is success which in safety work means humanitarianism, economic as well as physical safety to workmen with a resulting speed and economy to both the owner and the contractor.

Without statistics of a high order, our work in safety methods could not be capable of being measured. To this end, we have worked carefully with the United States Department of Labor, the National Safety Council and others to perfect and adopt standard methods of accident accounting, and the adoption of forms with standardized nomenclature of cause and result of accidents with standardized penalties in elapsed days for fatal and permanently disabling accidents. I believe a great deal of credit for these standardized methods of accounting is due to the National Safety Council because it is now possible to make results in one section comparable with those elsewhere, and is an inestimable help to those who are making a sincere and intelligent effort to reduce industrial accidents and their results in the construction industry.

I wish to repeat what I said in the beginning; that our members have been so completely sold on the subject of accident prevention among employees through the

\*Address delivered at the National Safety Council Congress, Buffalo, N. Y.

methods outlined in the foregoing that they regard it as an essential department of their business along with economy and efficient handling of any other department. Safety is not the privilege of the large contractor, for he has no patent or special advantage over the small contractor. Nor do we agree that the phrase I dimly remember, "a death a floor" should be stoically accepted, for while we occasionally have deaths, we have completed many multiple story buildings on which the death column in the accident record is blank. We have both large and small contractors, and I am convinced through my knowledge of accident occurrence in the construction industry that accident prevention is exactly as important, no more and no less, to the small as well as to the large contractor, and that the methods of controlling and minimizing accidents are as much available to the one as to the other.

We have had a small measure of success in preventing accidents. But it is a matter of common discussion in our committee that our work has only nicely begun and that "every day in every way" we expect to become better and better.

#### FACTS ABOUT CONTRACTORS' PROFITS

*Day Labor System Suggests Efforts of Man to Save Money by Cutting His Own Hair*

BY E. EARL GLASS

*Secretary, So. California Chapter, A. G. C.*

Not long ago we noted an interesting development in the constant effort for efficiency. Some outstanding genius had added a guard to an ordinary razor blade so it would cut hair, and the attractive advertising showed a young man before a mirror, smilingly serving himself a regular "head-barber trim." The sales talk made the new hair-cutting seem quite simple and satisfactory. We were not quite inveigled into trying it, but have seen work that might have been done that way.

Now, there is no question but this was a discovery of vital interest to every man and many women. Untold millions are probably spent for hair-cuts each year, for the barber is found everywhere you go, plying his nefarious business for profit. Here was a fair and logical proposition to save the barber's profit and do it yourself. Yet the almost convincing ads have disappeared from the Saturday Evening Post and the barber shops are still with us, perhaps because the public has a deep-seated conviction that the barber knows his business better than the amateur who would learn hair-cutting at the expense of each job he undertakes. Also, the proposal was that we cut our OWN hair so we would individually suffer should our heroic effort for

economy at any cost prove a mistake.

There are many other enterprises operated solely for profit yet it seems for some reason that we hear more about the contractor's profit than any other. The writer is an engineer and therefore in a better position perhaps, than a contractor to make a few statements of fact regarding this important subject.

We know there has always been a persistent propaganda for the day labor method of construction. We have heard it and read it for many years. The almost convincing arguments offered by some engineers and public officials for doing construction work "to save the contractor's profit" may sound plausible to the average citizen but do not deceive those familiar with the economics of construction projects.

We engineers have seen the unfortunate efforts of numbers of our fellows to branch out as contractors and have come to the conclusion that a man having the peculiar qualifications to succeed as a professional engineer is thereby disqualified by temperament and training to carry on actual construction within the costs necessary to underbid all competitors and yet retain any of that much-maligned profit.

The principal reason for the continued claims for saving when the skilled constructor has been eliminated from construction by the day labor method is that the fallacy of the theory is not willingly divulged by those who have tested it, and it is a very simple matter to juggle cost records so that their position is not questioned. High salvage estimates for equipment, judicious distribution of salaries and other proper charges together with convenient changes of plans and methods can easily brighten the unit cost figures, but the best measure of the method is the customary exhaustion of funds before completion of the work.

#### *Regardless of Cost*

As we all know, the contractor is bonded to assure proper completion of the job, strictly according to plans and specifications, regardless of the cost to him or the sufficiency of his estimates.

The public official or engineer takes no such risks upon himself, using public funds and seldom rendering a detailed accounting. The contrast between the two methods is all too evident and the recent enactment of the Breed day labor law in California proves the taxpayer is demanding some protection against irresponsible expenditure of public construction funds.

Responsibility in this sense is generally understood as the ability to furnish a negotiable bond securing the proper completion of the work for a definite figure, something entirely neglected in the day labor method to the serious prejudice of the owner's or taxpayer's interest. Only

when such surety is furnished by the proponents of force account work can the two propositions be considered in any way comparable.

#### *Stories of Fabulous Riches*

And now, getting down to "brass tacks," the amount of the contractors' profit is something which the public should know more about. Some persons have seen fit to represent it as something fabulously rich. Only a bit of common sense is necessary to see that the conditions of the contracting business make this practically impossible.

Despite the monumental service rendered humanity by the skilled constructor in fabricating the works planned by the architect and engineer, which should win for him the honest appreciation of all people, he is subjected to the most keenly competitive of all business relations so that his profit, so-called, or better, his compensation for expert service, is often trimmed down to an absolute minimum in the effort to obtain the award against all his competitors.

Is it then any wonder that only the most able contractors survive the hazards of this business or that, on any project, the best results are obtained at the least practical cost when the general contractor receives his legitimate profit?

—The Constructor.

Soft coal miners have a distinct advantage over similar laborers in the building industry. Careful study of the average daily earnings of miners in the Hocking Valley District of Ohio compared with the government figures for the average daily earnings of the same class of labor in the building industry, shows that last year the miner averaged \$8.83 a day while the same class of building labor received only \$4.36.

The Hocking Valley District figures are taken for soft coal miners, as the wage rate there is the basis for all other wage scales in organized districts where soft coal is mined.

What economists call "real earnings"—the purchasing power of the money earned in any particular industry and place—is really more important than the actual money earnings. Getting paid \$100 a day wouldn't be much if bread cost \$150 a loaf, or if it required \$50 to have your shoes shined. In this matter of "real earnings" the purchasing power of the bituminous coal miner has risen 74 per cent. since 1914, while the purchasing power of labor in the building business decreased 25 per cent. since 1914.

So attractive is the pay of the miners that the industry has drawn to it many thousands of men who are not needed to mine the coal. The excess of such miners is variously estimated at from 150,000 to 200,000.

### Build with or Specify **ASHLAND CONCRETE WALL TILE**

A High Grade Building Unit

Approved by Phila. Building Dept.

**B**RICKLAYERS like to lay it. They don't have to lay down the trowel, and one tile is equal to six bricks, which is laid almost as quickly as one brick.

In addition to the ease of handling, there is also the important advantage to the builder or owner of quick source of supply and a large stock available for prompt delivery.

There are many advantages compared to brick. It is an excellent base for stucco or plaster, and is even attractive enough to be used without stucco for any type of building.

## Sales of Navy Surplus by Public Auction as follows

A  
U  
C  
T  
I  
O  
N

With a view towards disposing of all Navy Surplus available in and around Boston, Mass., three sales by public auction have been planned as follows :

**SALE OF BUILDINGS IN THEIR ENTIRETY, OF STEEL AND IRON CONSTRUCTION, LOCATED AT THE DESTROYER AND SUBMARINE BASE AT SQUANTUM, (NEAR BOSTON), MASSACHUSETTS, HAS BEEN PLANNED AT PUBLIC AUCTION ON OCTOBER 29, 1923. CATALOGUE 528-A COVERS ALL DETAILS AS TO SIZE, DESCRIPTION, ETC.**

In addition to the sale of buildings above referred to, additional sales will be held as follows :

**SALE OF OCTOBER 25, 1923, CATALOGUE 536-A.**  
At the Destroyer and Submarine Base, Squantum (near Boston), Massachusetts. In this sale there will be included the remaining items of surplus such as boat chain, rivets, chain studs, scrap, etc.

**SALE OF OCTOBER 26, 1923, CATALOGUE 527-A.** At the Navy Yard, Boston, Massachusetts, covering surplus materials of a general character in large quantities, and condemned materials.

Sales will be held on the dates specified at 10 A. M. (Eastern Standard Time), unless otherwise stated in the Catalogue. Catalogues of sale containing all details as to description and terms of sale may be obtained upon application to the auctioneers ; namely, J. E. Conant & Company, Lowell, Massachusetts, or the undersigned.

**CENTRAL SALES OFFICE, Navy Yard, Washington, D. C.**

## As The Editor Sees It

### THE ECONOMY OF WINTER CONSTRUCTION OF BUILDINGS

(Editorial from *Engineering and Contracting*, Chicago, Sept. 26, 1923.)

We are all familiar with the statement of psychologists that men are the creatures of habit, but few of us undertake to apply that generalization to our own selves with a view to correcting habits that are uneconomic. For example, before present methods of construction existed, our forebears formed the habit of doing practically all their construction work during "good weather," that is in the late spring, summer and early autumn. This habit was, at one time economic, for during the "bad weather" seasons the roads were practically impassable, and building materials could not be delivered. Moreover, in those days lime mortar was the only cementing material used for brick and stone masonry, and lime mortar can not be safely used in freezing weather for its hardening depends upon the chemical absorption of carbonic acid gas from the air, a process that does not occur when the lime is frozen. With the introduction of portland cement, however, it became possible safely to build stone and brick masonry as well as concrete in freezing weather, but the age-long habit of regarding winter-built masonry as being unsafe had too strong a

grip to be easily overcome, and even yet causes many men to defer construction till "good weather" comes.

Architects, engineers and contractors usually know that most classes of building construction can be economically performed in the winter, but most "owners" of buildings are habituated to regard winter as an unfit construction time, and consequently defer ordering building construction until spring is at hand. But even members of the building profession have not entirely freed themselves from the ancient habit of looking upon winter as a poor time in which to build. They know that the average workman will not do as big a day's work in very cold weather as in warm weather, other things being equal, but they overlook the fact that other things are not equal. The very fact that winter jobs are not so plentiful as summer jobs makes for labor efficiency, since men will work harder when there is risk of being discharged and of not being able to secure another job quickly.

The prices of building materials are usually lower in winter than in summer, because of the slackened demand, and this reduction alone frequently amounts to a considerable percentage of the total cost of a building. Usually more than half the total cost of a building is the cost of materials. Hence a 10 per cent. saving on the cost of materials is equiv-

alent to more than 5 per cent. saving on the cost of the entire building.

One of the elements of building cost that is rarely seen in published statements of cost is the cost of delays in the delivery of materials. During the "good weather" seasons both the manufacturing plants and transportation plants are apt to be overloaded. Hence even if the factory or mill is ready to fill your order the railway or the motor trucks are unable to deliver the material. In the slack season the cost of such delays is eliminated.

If a building is being erected for rental purposes, it is highly important that it be finished either in the early fall or by the first of May. If construction work is planned for the "good weather" season, delays in getting work started, delays in securing materials, and inability to secure an adequate force of workmen at all times, very frequently prevent the completion of the building until after the fall renting date, Sept. 1 or Oct. 1, in consequence of which the owner suffers a severe loss of income. But even where the owner expects to occupy his own building, failure to complete it at the expiration of his lease is sure to cause him both expense and inconvenience. The cost of failure to complete a building at the time when occupancy of it is planned, is an item that seldom appears in estimates of cost but frequently does appear in large figures in any complete summary

**DRAWING  
MATERIALS**

PRINTS**

of cost.

In recent years much has been written about the economic desirability of lengthening the construction season. It has been pointed out that if workmen and construction plant are idle one-third of the time (and it averages longer) then the labor cost of construction becomes 50 per cent more than it would be were it possible to keep them continuously employed. The income of both labor and capital, in the final analysis, must be reckoned by the year and if only 200 of the 300 available working days in a year are actually worked, the cost per diem, both for wages and for fixed charges on the construction plant, is greater by one-half than it would be were the full 300 days made productive.

This economic argument in favor of continuous building construction is unanswerable, provided a day's construction cost in the winter does not greatly exceed a day's construction cost in summer. We are sure that, with fairly good roads, with modern machinery and devices, with building materials that can be safely used in freezing weather, winter building can be almost, if not fully, as economically conducted as summer building and that when consideration is given to all the elements of cost (such as labor efficiency, adequate labor supply, promptitude in delivery of materials, interest charges on the land and building up to the time of occupancy) then winter building construction becomes so clearly economic that even the most deep set habit of aversion to it can not survive.

It seems to us that every architect, every structural engineer, every building contractor, should submit estimates of building cost to his clients, demonstrating the real economy of all-the-year-round construction; for, after all it is the "owner" who is responsible for most of the postponement of building "until the frost is out of the ground." The age-long habit of such postponement still grips the average layman.

A Fall Outing of the members of the Philadelphia Builders' Exchange and Employers' Association will be held on the afternoon and evening, of Tuesday, October 23, at the Lu Lu Temple Country Club, Edge Hill, Pa.

*The Program:* Meet at the Club at one o'clock for a round of golf and for games of quoits, tennis, baseball, football, cards, and shuffle-board—anything you care to play inside or out. Golfers should mail their club handicaps to the Secretary at once. (Prize for low member's score.)

At six o'clock members will banquet at a real Beef Steak Dinner with all the delicacies for trimmings, and an elevating show for entertainment,

## PREPARED ROOFING SIMPLIFIED

At a meetnig held recently at the Department of Commerce with representatives of the Division of Simplified Practice and the Chamber of Commerce of the United States, manufacturers, distributors and consumers of prepared roofing agreed to the following simplifications as being of benefit not only to the industry but also to the public at large:

1. To eliminate all grades or kinds of slate-surfaced and also stone-surfaced prepared roofing that do not measure up to the requirements of the "Class C Label" of the Underwriters' Laboratories.

2. To reduce the varieties of smooth surface roofing to seven lines or grades—weights and qualities being considered.

This Simplified Practice Recommendation is to become effective January 1, 1924, and is to hold for one year.

According to Wm. A. Durgin, Chief of the Commerce Department's Division of Simplified Practice this is another step in the general program fostered by Secretary Hoover for the elimination of waste in industry. "The proposed eliminations," he said "were strongly supported by the American Institute of Architects, the National Retail Hardware Association representing 21,000 retail hardware dealers throughout the United States, the National Retail Lumber Dealers' Association, the Southeastern Builders' Supply Association, and the Prepared Roofing Association."

Prepared roofing is a product used all over the world, not only as a roofing material, but in cane fields and elsewhere for keeping weeds down and retaining moisture and warmth.

It is believed this program will bring many economies to the manufacturers, such as decreased idle stocks, less idle investment, and ultimately lower production costs, and benefit the distributors by stimulating turnover and increasing sales. Consumers will also benefit in due time through better quality, better prices, and quicker service. Several other simplifications of building materials have been completed, notably common and face clay brick. Others in process of completion are lumber, hollow building tile, cement brick, block and tile, clay drain tile, etc. All of these simplifications are contributing to the general effort to reduce the needless wastes in the building field, and thus forward the achievement of the ideal now so prominently before the public: "Better Homes at Lower Cost."

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

**Twin Bungalows**, Telford, Pa. Architect, Charles M. Talley, Telford, Pa. Owner, F. H. Fenstermacher, Telford, Pa. Frame, 1½ stories, 50x20 feet, hot air heat, electric light, shingle roof, pine floors. Contract awarded H. H. Minninger, Souderton, Pa.

**Residence and Garage**, Chest Mill Road, Wynecote, Pa. Architects, Zantinger, Borie & Medary, Otis Building, Philadelphia. Owner, B. Lippincott, care of architect. Brick and stucco, 2½ stories, 25x40 feet, shingle and canvas roof, oak and pine floors, tile work, electric light, hot water heat. Contract awarded to E. Allen Reeves, Abington, Pa.

**Office (alts.)**, Perkasio, Pa. Architect, Charles M. Talley, Telford, Pa. Owner, Dr. O. H. Strouse, Perkasio, Pa. Brick, hot air heat, tin roof, hardwood floors. Contract awarded Morris & Stoneback, Perkasio, Pa.

**Apartment (add.)**, 332 West Sixth street, Allentown, Pa. Architect, A. J. Bibighaus, 530 Hamilton street, Allentown, Pa. Owner, C. B. Rarerdini, on premises. Brick, 2 stories, 60x18 feet, Barrett Specification roof, pine floors, vapor heat, electric light. Contract awarded to F. Yeakel, 1420 Liberty street, Allentown, Pa.

## New Jersey Construction News

**Residences (2)**, Oak Lane, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owner, T. F. Nolan, 228 North Warren street, Trenton, N. J. Brick, 2½ stories, 64x38 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Plans in progress.

**Residence**, Morris Heights, N. J. Architects, W. W. Slack & Son, St. Regis Theatre Building, Trenton, N. J. Owner, J. A. Williams, 25 Newell street, Trenton, N. J. Hollow tile and stucco, 2 stories, 90x25 feet, tile roof, hardwood floors, hot water heat, electric light, tile and marble work. Plans in progress.

**Residence**, Somerville, N. J. Architects, W. W. Slack & Son, St. Regis Theatre Building, Trenton, N. J. Owner, J. Reger, Somerville, N. J. Tile and stucco, 2½ stories, 80x30 feet, slate roof, hardwood floors, hollow tile, hot water heat, electric light, tile work. Plans in progress.

**Hotel Beacon by the Sea (alts.)**, Point Pleasant, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, care of architect. Exterior and interior alterations to 3-story building, metal lath, tile work, hardwood floors, partitions. Plans in progress. Will be ready for bids in two weeks.

**Stable**, Westover, Pa. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owner, Edmund D. Cook, Jr., care of architect. Frame, 2½ stories, 82x28 feet, shingle roof, concrete floors, hot water heat, electric light. Plans in progress.

**Residence**, Westover, Pa. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owner, Edmund D. Cook, Jr., care of architect. Frame, 2 stories, 25x22 feet, shingle roof, pine floors, pipeless heat, electric light. Plans in progress.

**Hotel Beacon by the Sea**, Point Pleasant, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, care of architect. Brick and frame, 3 stories, 45x170 feet, tile roof, hardwood floors, hollow tile, elevators, electric lighting, metal lath, tile and marble work, fire doors, ornamental terra cotta. Plans in progress. Will be ready for bids in two weeks.

**Residence**, Morris Heights, N. J. Architects, W. W. Slack & Son, St. Regis Theatre Building, Trenton. Owner, A. F. Robertshaw,

Morris Heights, N. J. Brick, 2½ stories, 30x40 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Owner will build.

**Cottage**, South Weymont avenue, Ventnor, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City. Owner, H. Bogarth, Egg Harbor, N. J. Frame and stucco, 2½ stories, 24x28 feet, asbestos shingle roof, hardwood floors, hot water heat, electric light, tile work. Owner ready for bids.

**Residence and Garage**, Merchantville, N. J. Architect, Andrew C. Borzner, 717 Walnut street, Philadelphia. Owner, William H. Simpson, care of architect. Hollow tile and stucco, 2½ stories, 43x52 feet, 1 story, 20x20 feet, hot water heat, electric light, tile and marble work, shingle roof, hardwood floors, cement work. Architect will take bids in two weeks.

**Apartment**, Atlantic City, N. J. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City. Owners, Bornstein, Frank & Uram, care of architect. Brick, steel, 3 stories, 36x72 feet, slag roof, hardwood floors, hot water heat, electric light, metal lath, tile work, roof ventilators, skylights. Owners and architect taking sub-bids.

**Hotel (alts. and add.)**, South Kentucky avenue, Atlantic City. Architect, J. R. Ogden, 143 South South Carolina avenue, Atlantic City. Owner, Miss Margaret Healy, on premises. Brick and frame, 2 stories, 12x40 feet, slag roof, hardwood floors, electric light, general interior alterations. Plans in progress.

**Store and Apartment**, Gloucester, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owners, Black & Anders, Gloucester, N. J. Brick and cinder block, 2 stories, 80x80 feet, slag roof, pine floors, hot water heat, electric light. Plans in progress.

**Residence (add. and alts.) to Apartment**, Merchantville, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owner, Mrs. W. P. Fowles, Merchantville, N. J. Lumber, general interior alterations, partitions, steam heat, electric light. Plans in progress.

**Store Front**, 427 Broadway, Camden, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owner, A. S. Polotz, on premises. Plate glass, cement work. Plans in progress.

**Rooming House (alts. and add.)**, Atlantic avenue, Atlantic City. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City, N. J. Owner, Mrs. A. Deutsch, 145 Ocean avenue, Atlantic City, N. J. Brick, 4 stories, 28x14 feet, 31x12 feet, slag roof, pine floors, electric light, metal lath, tile work. Plans in progress. Will be ready for bids in two weeks.

**Shelter Shed and Waiting Room**, Concourse Waiting Room, Trenton. Architect, W. H. Cookman, Broad Street Station, Philadelphia. Owners, Pennsylvania Railroad Co., Broad Street Station, Philadelphia. Steel and wood, 300x30 feet, slag roof, pine floors, electric light. Plans in progress.

**Junior High School**, Cherry and Westfield streets, Elizabeth, N. J. Architects, Kilham, Hopin & Greeley, 9 Park street, Boston, Mass. Owners, Board of Education, Elizabeth, Union County, N. J. General construction, plumbing, heating, ventilating, electric wrecking. Owners taking bids due October 24th, 8 P. M.

**Bell Telephone Building**, Princeton, N. J. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Delaware & Atlantic Telephone & Telegraph Co., care of Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Brick, cut stone and steel, 2 stories and basement, 96x33 feet, steam heat, electric light, metal lath, tile and marble work, glass slate skylights, bond, slate roof,

composition and cement floors. Architect taking bids due October 18th.

**Dudley Hotel (alts. and add.)**, 28-32 South Pennsylvania avenue, Atlantic City, N. J. Architect, M. B. Silverstein, 119 Springfield street, Newark, N. J. Owner, Louis R. Pollock, on premises. Brick, 3 stories, 90x30 feet, Barrett Specification roof, hardwood floors, electric light, metal lath, tile, marble and terrazzo work, rolled steel skylights, terra cotta trim. Owner taking bids.

**Residence**, Beach Haven, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owner, Mr. Lackey, care of architects. Frame, 2 stories, 25x50 feet, shingle roof, pine floors, electric lighting, plaster board. Architects taking bids due October 19th.

**Vocational School (add.)**, Atlantic City, N. J. Architect, H. A. Stout, Guarantee Trust Building, Atlantic City, N. J. Owners, Board of Education, H. H. Young, Atlantic City, N. J. Brick, steel, concrete, 5 stories, 34x114 feet, slag roof, concrete floors. Lowest bidder, M. B. Markland, Guarantee Trust Building, Atlantic City, N. J.

**Grade School**, Paulsboro, N. J. Architects, Ritter & Shay, North American Building, Philadelphia. Owners, Board of Education, Borough of Paulsboro, N. J. Low bidders: G. W. Shaner, Palmyra, N. J., \$116,720; Chester Cont. & Const. Co., Chester, Pa., \$121,990. Electric, Enterprise Electric Co., 230 South Tenth street, Philadelphia, \$3,300. Plumbing, R. J. Hoben, 258 South Van Pelt street, Philadelphia, \$6,470. Heating, H. J. Hutchinson, 1020 Callowhill street, Philadelphia (split steam), \$13,333; J. J. Nesbitt, Atlantic City, N. J. (universal unit system), \$16,998; American Heating & Ventilating Co., 100 North Fifteenth street, Philadelphia (hot air), \$7,998.

## New Jersey Contracts Awarded

**Public School**, Woodbury, N. J. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Board of Education, Woodbury, N. J. Contract awarded to T. M. Gibbs Cont. Co., 215 South Broad street, Philadelphia, \$296,983. Plumbing, W. Newell, 1707 Sansom street, Philadelphia, \$14,866. Electric, Enterprise Elec. Co., 239 South Tenth street, Philadelphia, \$11,399. Heating, J. H. Hutchinson, 1020 Callowhill street, Philadelphia, \$38,961.

**Double Residence**, Atlantic City, N. J., \$11,400. Architect, W. B. Riebenack, Guarantee Trust Building, Atlantic City. Owner, Mrs. Louise Desney, 308 North New Hampshire avenue, Atlantic City, N. J. Frame, 2½ stories, 24x40 feet, asphalt shingle roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to Mr. Clevenger, Pleasantville, N. J.

**Stanley Hotel (alts. and add.)**, Atlantic City, N. J. Architect, J. R. Ogden, 143 South South Carolina avenue, Atlantic City. Owners, Stanley Hotel Co., Inc., care of architect. Brick, hollow tile and stucco, 1 and 5 stories, 32x20 feet and 40x90 feet, slag roof, pine floors, hollow tile, electric light, tile work. Contract awarded to Charles Thompson, Pleasantville, N. J.

**Garage**, 210 Brunswick avenue, Trenton, N. J. Architect, H. G. Aitken, American Mechanics' Bank Building, Trenton, N. J. Owner, John White, on premises. Cement block and structural steel, 1 story, 25x50 feet, slag roof, concrete floors, electric lighting, rolled steel sash. Contract awarded to F. J. Bayer, 25 Lewis street, Trenton, N. J.

**Residence (alts. and add.)**, Pleasantville, N. J. Architect, D. A. Rosenstein, Humphreys Building, Atlantic City. Owner, M. K. Boyajian, 1909 Boardwalk, Atlantic City, N. J.

Brick, stucco, 2 stories, slate roof, hardwood floors, electric light, tile work. Contract awarded to Philip G. Hannum, Georgia avenue and Thorofare, Atlantic City, N. J.

## HOW ELECTRICIANS MAY REDUCE FIRE HAZARDS

During the year 1921, the last for which detailed statistics have been used by the National Board of Fire Underwriters, the loss from fire in the United States reached the stupendous total of \$495,406,012.

Of this loss, \$12,723,209 is charged to electricity, fires attributed to that cause ranking fifth in destructiveness. The newspapers and the general public ascribe this terrific loss to "defective" wiring, because it is generally known that there is no safer form of power, light and heat than electricity, and the popular assumption is that wiring is always to blame when fire is caused by an electric current. The figures constitute in the public mind a fearful indictment against electrical wiring, electrical workmen and electrical contractors—an indictment that is utterly without justification, because practically all wiring is safe when installed.

Definite figures on this point are not available, but it is practically certain that they would show that fires caused by electric current originate in about the following order:

- 1—From overloading by attachments, such as washing machines, electric irons, cleaners, etc., without consulting an electrician as to the capacity of the system.
- 2—From amateur interference with circuits after installation.
- 3—From injury to insulation by rats, mice or accidental cause.
- 4—From overloading of circuits by extensions, made by amateurs or by electricians under pressure of owners unwilling to bear the expense of replacing original lines.
- 5—Sparkling by motors.

Of course these are direct causes of fire from electric current; the indirect cause will be found in wiring that fails to provide adequate protection against such conditions.

It is safe to say that fifty per cent. of the dwellings now using electricity were wired before the use of electrical appliances in homes became common, and no provision was made for the load required to operate these in conjunction with the proper number of lamps. The original fuses in thousands of homes have been replaced with others sufficient to carry the load, the home owner knowing nothing of the danger attending such a proceeding. It is, therefore, surprising that the number of fires caused by overloaded circuits has not been larger. That this old wiring was well done is more

than evident from the fact that most of it was of the unprotected variety and nearly all of it has since been called upon to do work far beyond the margin of safety originally provided. Fires from overloaded circuits are practically unknown where rigid conduit or a good steel armored cable is used.

The important fact is that there have been enough fires directly traceable to the failure of unarmored wiring under the circumstances outlined above to create in the public mind an impression that every fire which cannot be certainly ascribed to some other cause should be credited to "defective wiring." That such an impression does exist is shown by the readiness with which this term is used by the newspapers, which, of course, cannot and do not explain why the wiring was defective, even in cases where there is evidence that it was responsible for fire.

The conditions above described are certain to react strongly against the use of electricity for many purposes for which it is most valuable, eventually affecting both the sale of electrical appliances and the installation of electric wiring. The whole industry is therefore vitally interested in removing such conditions, and the logical way to do this is to increase the use of rigid conduit or good armored cable. The ideal wiring is, of course, that enclosed in rigid steel conduit, but where the cost prevents this, approved armored cable should be used, especially since good steel armored cable can be installed at very slight additional cost, provides effective protection against overloaded circuits, and prevents "tinkering" with wiring by unskilled persons who prefer to take chances rather than pay for the services of an electrician.

During the past year in the State of Ohio three women were electrocuted in laundries at their homes. In every case it was found that the fatalities were caused by wiring which had been installed in accordance with the local code, but had been changed afterward by the owner of the building. It had worked all right until a combination of his larger capacity fuse, his brass socket, a concrete floor and a weak heart brought about a catastrophe. Of course, the electrician who installed the service and the corporation which furnished the current were accused of causing these tragedies, and in one case a court trial was necessary to establish their innocence and make plain the real cause.

Few cities or towns are without a legally established code, supposed to provide against these contingencies, at least to a reasonable extent. All of these codes provide for authorized inspection, and electricians generally respect their provisions. The trouble arises from the fact

that these codes provide solely for the safety of the wiring at the time it is inspected, or perhaps for a reasonable degree of assurance that short circuits and overloads will not occur naturally. They cannot and do not provide against experiments by the owner or occupant with a handy turn and just enough knowledge of electrical details to make him dangerous. Nor do they provide for the thousand and one emergencies that are sure to confront every electrical installation during its lifetime, unless it is protected against injury, changes and extensions by the unskilled.

These are conditions which probably prevail in four-fifths of the houses in this country enjoying electric service. They are not the fault of the industry, so much as that of the public. They could be avoided by the use of rigid conduit or a good armored cable, but the cost would be greater, and the average contractor finds that his customers insist on the lowest possible cost. Nevertheless, if the actual difference in the cost of open wiring and that in which a thoroughly good armored cable is used were more generally known, it is certain that architects and electrical contractors would more strongly recommend protected wiring for small residences. The smaller home is the most important unit from this standpoint, because more expensive buildings are generally wired with rigid conduit, architects and engineers understanding the necessity for protecting wires in these structures and the restrictions as to cost being less exacting.

With a view of securing reliable data on this subject, The Youngstown Sheet & Tube Company, which manufactures both rigid conduit and steel armored flexible cable, recently arranged with the Lakewood Electric Company, one of the more prominent contracting firms in Cleveland, Ohio, to wire two similar houses—one with knob and tube and the other with Realflex, and keep an accurate and detailed account of the relative cost. The houses selected were two-family dwellings, of fairly good type, arranged with five rooms and bath on each floor and having a cellar and attic. Each room has a suitable opening for ceiling light, and provision was made for side lights in the bathrooms. Baseboard and porch light openings were located conveniently. The work in both houses was done by the same men, and the number and location of openings is identical.

Actual cost of the two types of wiring is given below. It should be stated that the workmen were unfamiliar with armored cable, this being the first new job on which they had used it exclusively, and the item of labor on the cable job is therefore probably somewhat higher than it might have been otherwise.

It is unfortunate that no adequate idea of the difference in the appearance of the two jobs can be given because it is impossible to present a photograph showing the whole. Where this material has been used, any changes or extensions must be made by a skilled mechanic, since there are no open wires. Attention is called particularly to the basement in the cable-wired house, in which there are no unprotected wires except those of the bell system, which are connected to the service by the usual transformer. The usual number of cellar openings is provided, these being served from the first floor. Contrast this with the open wiring in the basement of the other house.

It will be seen from the figures given above that the cost of wiring a house of this kind, which is fairly typical of the structures in which steel armored cable should be used, is increased only about 25 per cent. by the use of cable—an increase amounting in this case to the trifling sum of \$24.46 for two six-room dwellings. The owner of these houses examined the two jobs of wiring after they had been completed, but before the relative cost had been obtained, and stated that the Realflex job was so evidently superior to that, on its appearance alone, he would be glad to pay 30 per cent. additional for the cable.

These facts and figures can be substantiated by anyone. They are convincing evidence that economy and safety are both secured by the use of a good armored cable in installations of this type, and they should lead to a greater insistence on the part of electrical contractors that their customers permit the installation of wiring that will not only remain as it is installed unless changed by some one who knows how, but will also be safe from the countless accidents to which the ordinary knob and tube installation is liable. Every electrical contractor who follows this suggestion will help to reduce the fire losses of the country and relieve the electrical industry from the odium of being credited with an annual fire loss of more than twelve million dollars.—*National Builders' Bulletin*.

You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.

## PAINT AS AN INSURANCE POLICY AGAINST THE ELEMENTS

Too few home builders and building investors look upon painting a home or other building as simply a color and a luxury, instead of a preservative and an insurance policy against the constant deterioration from the elements. For any building of lumber, brick, cement or stucco will require painting inside and out to keep it safe from the unremitting attack of wear and weather.

When the surface is unprotected, wood deteriorates rapidly. Delay in painting may mean new siding and unnecessary repairs. When paint is worn off the cornice it won't be long before a new cornice will be required. Paint is much cheaper than new materials, for repainting will run to 6 or 7 per cent. of the value of your building, while without painting, deterioration will go as high as 30 per cent. of the value, readily disclosed when one borrows funds upon it as security or attempts to sell.

Painting is not only first cost, it is upkeep and overhead expense after the building is complete. Many a house of good architectural design loses 50 per cent. of its beauty because of poorly applied paint, both in color scheme and workmanship. For those who demand reasons there are three on why one should keep the inside and outside of a building painted. First, quality paint and workmanship protect and preserve the wood finish, trim, exterior siding, shingles, etc. Second, attractive, practical painting adds cash value to the investment. Anything that improves neighborhood appearances, that adds beauty to home surroundings, increases real estate and property values. Third, a home or business building represents a going concern, a business investment with fixed credit or cash rating. Those who loan on such will declare that a well painted building is a better money risk with a greater loan or selling value.

—*Building Industry*.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—*Elbert Hubbard*.

## SAVE LABOR and MONEY

*More Economical to Use*

Build with or Specify  
**ASHLAND  
CONCRETE  
WALL TILE**  
A High Grade Building Unit

Approved by Phila. Building Dept.

**B**RICKLAYERS like to lay it. They don't have to lay down the trowel, and one tile is equal to six bricks, which is laid almost as quickly as one brick.

In addition to the ease of handling, there is also the important advantage to the builder or owner of quick source of supply and a large stock available for prompt delivery.

There are many advantages compared to brick. It is an excellent base for stucco or plaster, and is even attractive enough to be used without stucco for any type of building.

## Sales of Navy Surplus by Public Auction as follows

A  
U  
C  
T  
I  
O  
N

With a view towards disposing of all Navy Surplus available in and around Boston, Mass., three sales-by public auction have been planned as follows :

**SALE OF BUILDINGS IN THEIR ENTIRETY, OF STEEL AND IRON CONSTRUCTION, LOCATED AT THE DESTROYER AND SUBMARINE BASE AT SQUANTUM, (NEAR BOSTON), MASSACHUSETTS, HAS BEEN PLANNED AT PUBLIC AUCTION ON OCTOBER 29, 1923. CATALOGUE 528-A COVERS ALL DETAILS AS TO SIZE, DESCRIPTION, ETC.**

In addition to the sale of buildings above referred to, additional sales will be held as follows :

**SALE OF OCTOBER 25, 1923, CATALOGUE 536-A.**  
At the Destroyer and Submarine Base, Squantum (near Boston), Massachusetts. In this sale there will be included the remaining items of surplus such as boat chain, rivets, chain studs, scrap, etc.

**SALE OF OCTOBER 26, 1923, CATALOGUE 527-A.** At the Navy Yard, Boston, Massachusetts, covering surplus materials of a general character in large quantities, and condemned materials.

Sales will be held on the dates specified at 10 A. M. (Eastern Standard Time), unless otherwise stated in the Catalogue. Catalogues of sale containing all details as to description and terms of sale may be obtained upon application to the auctioneers ; namely, J. E. Conant & Company, Lowell, Massachusetts, or the undersigned.

**CENTRAL SALES OFFICE, Navy Yard, Washington, D. C.**

## As The Editor Sees It

Conditions affecting construction activities next Spring will be closely similar in character to those which prevailed at the opening of the eccentric building season of 1923, according to indications drawn from statements of leading general contractors and other observers of the trend of operations. These statements, made for the *Constructor*, the publication of the Associated General Contractors of America, stripped of localisms, also seem to coincide upon the thought that owners and others will do well to use caution next year in timing their operations, lest a "mad market" for labor and materials, such as threatened early this year, be encountered and the entire situation demoralized.

The belief in some quarters, as expressed in the statements published in the current issue of the *Constructor*, also seems to be that an unusual amount of work is to be undertaken for completion during the first months of 1924. In some sections of the country, where the deficiency in buildings is especially noted, leaders are advocating that winter construction be urged, with a softening of prices, of materials, and of wages, being held as inducement for this step to be taken to avert an extraordinary demand during the months when construction most ordinarily is placed under way.

Many of these individual statements deal directly with the question of whether curtailment of operations, such as was

advocated and initiated by the Associated General Contractors of America last Spring, be held as policy next year to avoid run-away prices of materials and costs of labor, or whether a relaxation, perhaps entire absence of action, will be more advisable.

Quotations from a number of the statements appearing in the *Constructor* follow:

James Baird, George A. Fuller Co., New York—Judging from the permit record covering the period of June, July and August, there is assurance the country in general having a large building program for this coming year; consequently, I look for a very serious labor shortage again in the spring. There is so much speculative work contemplated that I do not think it would be desirable to encourage it too much. Personally, I would prefer to see a seasonable amount of the work postponed until we are assured of a more ample supply of labor and material.

H. W. Baum, H. W. Baum Company, Salt Lake City—It is our opinion that there is not likely to be a situation during the coming year which will require curtailment in any substantial form in the construction activities of the inter-mountain district.

L. C. Wason, Aberthaw Company, Boston—My forecast for the future is that there will be slight reduction in building

costs through the winter, due to softer spots in the material markets and increased labor efficiency, but that the usual spring building activity will bring costs back to about the present level. Therefore a "Build Now" campaign for fall and winter is in the line for stabilizing the industry and giving the investors a square deal.

Sumner Sollitt, Sumner Sollitt Co., Chicago—Men available for construction are not now plentiful. I thoroughly believe that no propaganda at the present time, either for obstructing or accelerating the desire for contemplated construction, is necessary. Moderate price residential work will go ahead in volume just as soon as owners are sure they can obtain value received. Building construction on railroad is becoming more active and certainly much is contemplated. Manufacturers seem to have had a good year and expansion seems to be still their desire.

W. F. Austin, W. E. Wood Company, Detroit—It would seem to us, from our very limited knowledge of the situation, that the safest plan would be to advocate that for the next six months, at least, the building construction be confined to those structures most urgently necessary. Doing this not with the idea that costs may be lowered after that period, but with the thought that unless something of this kind is done costs will again reach the point where a general let-up and uni-

PRINTS**

versal discontinuation of construction operations will be the result.

A. S. Downey, A. W. Quist Company, Seattle—Taking everything into consideration, it would seem a wise policy at this time to encourage building construction so that we may gradually bring our building program to meet the present demands.

Henry Ericsson, Henry Ericsson Company, Chicago—The after-effect of the war had a very peculiar influence on things in general. It seems to me that everybody is having more money and lives on a higher plane than before the war; this creates a demand for more new buildings than was required before the war. That is one of the reasons for the building rush in the past and it may be the reason for its continuance for another year or two.

S. B. Haux, The American Construction Co., Houston—It is my observation in this locality that further curtailment of building operations is essential to the good of the cause, due to the unprecedented demand of labor.

Otto M. Eidlitz, Mark Eidlitz & Son, New York—I believe that wages are probably fixed for the next two years and that the price of building materials will vary somewhat during the winter months.

The work that would normally come out to meet the still unsatisfied demand for housing and additional business accommodations as well as the starting up of the work that has been held up during this year, will make 1924 a big year in the building industry.

T. T. Flager, The Flager Company, Atlanta—This is a very general view. In particular we are interested in construction only in the South and throughout this territory it is my opinion that further building under present conditions will be profitable to the owners in something like 90 per cent. of the territory we cover, and this is the real criterion which should cover the volume of construction.

Archibald M. Woodruff, Third Vice President Prudential Insurance Company—At the present time we are having a very large demand for mortgage loans to be secured by complete structures, and we have recently declined a number of applications for construction loans. From the information we have received, it is my opinion that there will be an excessive demand for labor in connection with building construction work for several months at least, particularly in our larger cities.

H. C. Turner, Turner Construction Company, New York—As to business conditions in the future, most of the factors seem favorable for good business, but we have had a bad wheat situation, a disorganizing oil industry and uncertain legislative prospects.

Having in mind the great volume of work offered this past eight months, only a part of which could be built, it would seem foolish if the country did not give full employment to all competent workmen during the coming winter and the year 1924.

The President of a leading Engineering Society—I am glad that the construction program was curtailed some few months ago, and while I think that at this season it is not likely to run away, yet I believe that caution is necessary lest the program for the next year be made too ambitious and we start out at the beginning of the 1924 construction season with a bigger program than can be put over, with the consequent result that the precedents will be artificially boosted.

The Comptroller of a leading Life Insurance Company—As to the trend of construction activities, I do not see any likelihood that they will be dismissed. I think the country is still behind in its construction program as to buildings used for residence purposes and business buildings. I have no information on factories, as we do not lend on factory properties, but I think it is likely that it will be some time before the building program has reached the saturation point.

H. N. Leighton, H. N. Leighton Company, Minneapolis—As to the advisability of relaxing the curtailment of building operations advocated earlier in the year, it is our judgment that this should be done. This statement is based on the impression which has come to us especially during the past six months, during which time there has been a very pronounced decrease in the amount of work offered for figures, and if anything can be done to counteract this tendency it would seem to be highly advisable.

L. J. Horowitz, Thompson-Starrett Co., New York—I am of the opinion that conditions have been considerably improved, but that the time has not yet arrived when it can be said that the industry has been stabilized to a sufficient extent to make it prudent for an owner to embark upon a building operation to which he is not committed. There will, of course, be exceptions to this rule. There are some situations which will warrant an owner to proceed notwithstanding high costs, because his needs for space are so great as to overshadow the disadvantage of high costs.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Works, Twenty-second and Washington avenue, Philadelphia.

**Factory**, Ardmore, Pa. Architect, John Charles Norton, Ardmore, Pa. Owner, J. N. Caruso, 45 West Lancaster avenue, Philadelphia. Penn Building Block, steel, 2 stories, 32x80 feet, asbestos built-up roof, concrete and pine floors, hot water heat, electric light, elevators, reptic tanks, motors, hollow metal sash, fire doors. Contract awarded Merion Cont. Co., 2315 Walnut street.

**Residences (2)**, Bryn Mawr, Pa. Architects, Thomas, Martin & Kirkpatrick, Otis Building, Philadelphia. Owners, Joseph Carson and Mrs. W. Rudolph Smith, 1524 Chestnut street. Stone, 2½ stories, 70x80 feet and 39x38 feet, slate roof, oak and pine floors, hot water heating, electric light, metal lath, tile work, iron work. Contract awarded to Herbert G. Campion, Otis Building, Philadelphia.

**Parochial School and Auditorium**, Nineteenth and Providence avenue, Chester, Pa. Architect, F. Ferdinand Durang, 1220 Locust street, Philadelphia. Owners, St. Robert's Roman Catholic Church, care of Rev. R. J. Thompson, Chester. Stone, 3 stories, 65x160 feet, will contain 16 class rooms and gym; auditorium, 1 story, 40x117 feet, slate roof, steam heat, electric light. Contract awarded M. Melody & Son, 1322 Race street, Philadelphia.

**Residence and Garage**, Sellersville, Pa. Architect, Charles M. Talley, Telford, Pa. Owner, E. W. Simkins, Sellersville, Pa. Brick, 2½ stories, 30x40 feet, 1 story, 20x20 feet, vapor heat, electric lighting, tile and marble work, cement work, hardwood floors, slate roof. Contract awarded Stoneback & Morris, Perkasio, Pa.

**Residences (2)**, Pottsville, Pa. Architect, G. C. Freeman, Liberty Bank Building, Reading, Pa. Owners, Lilly, Paul & Mark, care of architect. Hollow tile and stucco, 2½ stories, 40x40 feet, asbestos shingle roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to Charles Quandt, Minersville, Pa.

**Residence and Garage**, Elkins Park, Pa. Architects, Andrew J. Sauer Co., Denckla Building, Philadelphia. Owners, Mr. and Mrs. Morris Kauffman, care of architect. Cut stone, stone and steel, 2½ stories, 74x50 feet, garage, 25x25 feet, slate roof, hot water heat, electric light, metal lath, tile and marble work, weather strips, iron work. Contract awarded J. Sims Wilson, 1125 Brown street, Philadelphia.

**Residence and Garage**, Elkins Park, Pa. Architect, Andrew C. Borzner, 717 Walnut street, Philadelphia. Owner, B. Springthorpe, Wakefield and Feymour streets, Germantown, Philadelphia. Stone and stucco, 2½ stories, 68x41 feet, 1 story, 20x24 feet, hot water heat, electric light, tile work, hardwood and cement floors, slate roof. Contract awarded S. W. Chapman, 126 North Felton street, Philadelphia.

**School**, Trainer, Pa. Architects, Ritter & Shay, North American Building, Philadelphia. Owners, Sinclair Oil Co., New York City. Brick, cut stone, limestone, steel, 3 stories, 76x61 feet, steam heat, electric light, metal lath, tile work, composition roof, maple floors. Contractor taking sub-bids due October 25th. Contract awarded to Chester Cont. & Const. Co., Chester, Pa.

**Road Work**, Pennsylvania. Owners, Department of Highways, Harrisburg, Pa. Crawford County, Route 83, Conneaut Lake Borough, Sadsbury, Summitt and Pine Townships, 29,027 feet. Either bituminous surface course on concrete foundation or one course reinforced concrete. \$252,936.39. Contract awarded to H. E. Bunce, Linesville, Pa.

## New Jersey Construction News

**Shelter Shed and Waiting Room**, Concourse Waiting Room, Trenton. Architect, W. H. Cookman, Broad Street Station, Philadelphia. Owners, Pennsylvania Railroad Co., Broad Street Station, Philadelphia. Steel and wood, 300x30 feet, slag roof, pine floors, electric. McNichol Paving Co., 1923 Cherry street, Philadelphia, will build and are taking sub-bids.

**Residences (2)**, Trenton, N. J., \$6,000. Architect, private plans. Owner, Mathias Mahler, 16 West street, Trenton, N. J. Brick, 2 stories, 14x30 feet, 12x14 feet, slate roof, pine floors, electric lighting. Owner will build.

**Residences (2)**, Cleveland avenue, Trenton, N. J., \$6,000. Architect, private plans. Owner, Richard Burgess, 346 Cleveland avenue, Trenton, N. J. Brick, 2½ stories, 43x13 feet, slate and tin roof, pine floors, hot air heat, electric light. Owner will build.

**Residences (4)**, Trenton, N. J., \$16,000. Architect, private plans. Owners, Home Development Co., Forst Richey Building, Trenton. Brick, 2½ stories, 14x40 feet, slate roof, pine floors, hot air heat, electric light. Owners will build.

**Y. W. C. A. Building**, Hanover street, Trenton, N. J. Associate architect, William Thompson, 342 Madison avenue, New York, and J. O. Hunt, Hunt Building, Trenton, N. J. Owners, Y. W. C. A., Mrs. Edward Dunham, 365 West State street, Trenton, N. J. All bids rejected. Will readvertise.

## New Jersey Contracts Awarded

**Cottage and Garage**, Cape May, N. J. Architects, Zantinger, Borie & Medary, Otis Building, Philadelphia. Owner, name withheld. Frame, 2½ stories, 30x30 feet, 1 story, 18x20 feet, shingle roof, hot water heat, electric lighting, tile work, hardwood and cement floors. Contract awarded W. L. Cummings & Son Cape May, N. J.

**Garage**, 310 Mulberry street, Trenton, N. J., \$6,300. Architect, private plans. Owner, Yara Yago, 310 Mulberry street, Trenton, N. J. Concrete block and brick, 1 story, 37x124 feet, slag roof, concrete floors, electric lighting. Contract awarded to J. H. Faber, 24 Victory street, Trenton.

**Store and Apartment**, Trenton, N. J., \$6,000. Architect, private plans. Owner, Joseph Midira, care of builder. Frame, cement block, 1 story, 20x35 feet, 15x15 feet, slag roof, pine floors, electric lighting. Contract awarded to Alex. Majewski, 1409 Princeton street, Trenton, N. J.

## Delaware Construction News

**Road Work**, Delaware. Owners, Delaware State Highway Department, Dover, Del. Contract No. CK-17, through Frederica, 0.518 miles. Lowest bidder, Juniata Co., Empire Building, Philadelphia, \$19,294.

**Temporary Timber Bridge**, Seaford, Del. Owners, Delaware State Highway Department, Dover, Del. Contract No. 42-A. Lowest bidder, Field, Barker & Underwood, Commercial Trust Building, Philadelphia, \$4,700.

The BUILDERS' GUIDE is in its thirty-eighth year of continuous publication.

## Delaware Contracts Awarded

**Residences (3)**, West Twenty-eighth street, Wilmington, Del., \$14,700. Architect, private plans. Owner, H. S. Baynard, Twentieth and Van Buren streets, Wilmington, Del. Brick, cinder block, 2 stories, 24x28 feet, slag roof, hot air heat. Contract awarded to Heindle & Samworth, 1600 West Fourteenth street, Wilmington, Del.

**Garage (alts. and add.)**, 1203 Orange street, Wilmington, \$6,024. Architect, private plans. Owner, Milton Simpler, on premises. Brick, 1 story, slag roof, concrete floors, electric lighting. Contract awarded to Charles E. Anderson 3 East Thirteenth street, Wilmington.

**Residences (6)**, Union Park Garden, Wilmington, Del., \$24,000. Architect, private plans. Owners, Wilmington Home Corp., 923 Market street, Wilmington, Del. Brick, 2 stories, 14x37 feet and 13x37 feet, composition roof, pine floors, hot water heat, electric light. Contract awarded to J. A. Bader & Co., 923 Market street, Wilmington.

**Garage**, Tatnall street and West Twentieth street, Wilmington, Del., \$7,500. Architect, private plans. Owner, James J. English, Dupont Building, Wilmington, Del. Brick 1 story, 10x19 feet, slag roof, concrete floors, electric light. Contract awarded to S. R. Jackson, 831 Orange street, Wilmington, Del.

**Residences (9)**, West Twentieth street, Wilmington, Del., \$49,500. Architect, private plans. Owner, James J. English, Dupont Building, Wilmington, Del. Brick, 2 stories, 25x32 feet, slag roof, hot water heating. Contract awarded to S. R. Jackson, 831 Orange street, Wilmington, Del.

## Miscellaneous Construction News

**Parish House**, Salisbury, Md. Architect, Frank R. Watson, 1211 Walnut street, Philadelphia. Owners, St. Peter's Episcopal Church, Salisbury, Md. Brick, 1 story and basement, 93x36 feet, slate and slag roof, oak and pine floors, bond, tile work, metal lath, electric work, steam heat. Contract awarded Morris & Pusey, Cape Charles, Va.

### Proposal

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., October 19, 1923—Sealed proposals will be opened in this office at 3.00 P. M. November 9, 1923, for new roof on large dwelling and alterations to farm buildings to make garage space at the U. S. Veterans' Bureau Hospital, Castle Point (Chelsea), New York. Drawings and specifications may be obtained from the superintendent of construction at Chelsea, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### BUILDING OUTLOOK

In the opinion of many of the leading financiers the threatened building slump is rapidly passing and there is a strong inquiry for capital to be used for building purposes. According to the best information available, the housing shortage has only been reduced by about 25 per cent. during the past four years. It is estimated that in a third of the cities and towns of the United States having a

population of more than 8,000 there are inadequate school facilities. In addition to the house and school shortage there is an almost unprecedented demand for commercial buildings. It is believed that by autumn the slight slump which first became noticeable in June will be entirely overcome. Every indication points to 1923 as being the banner year in point of volume and value of construction in this country. The first half of 1923 registered a valuation of more than \$500,000,000 in excess of any similar period heretofore.—*Associated Contractors.*

Another jolt for "the white collar job" is seen in the announcement from Carnegie Institute of Technology, in Pittsburgh, that, of the 1200 night students enrolled for the present year in the College of Industries, fifty per cent. have signed to take course in the building trades. This division of students is viewed with unusual significance by officials of the Institute as representative of a growing tendency among the young men of Pittsburgh to learn craftsmanship.

Moreover, according to the report, the increased interest in the building construction courses is confined to no one branch of the industry, but is reflected in each department offering building courses. In some of the departments, the number of students enrolled for the present year is 200 to 300 per cent. larger than of the previous year.

The courses in carpentry and in electrical equipment and construction report the heaviest gains, especially in new students. Of the sixty or more carpentry students enrolled up to a few days ago, more than 40 were new students, while the department of electrical equipment and construction enrolled more than 60 new and more than 50 former students. The reason for the heavy enrollment of would-be electricians and carpenters this year is attributed by Carnegie Tech authorities to the high wage scales at present in force in these branches of work. Another reason, somewhat indirectly responsible but nevertheless noticeable, is due to the growing interest that labor unions are showing in educational facilities for their respective apprentices. A striking example of this attitude by the unions was revealed in the recent action of the local union of the International Wood-Wire and Sheet Metal Lathers' Union which, on its own initiative, has effected a working agreement with Carnegie Tech to train apprentices of this trade. As a result of this agreement, about 15 apprentices attached to the local sheet metal lathers union have enrolled at the Institute, and are compelled by the union to attend a special night course three nights a week for the next two years.

While the action of the sheet metal lathers is the only official agreement that has been announced by the Institute, several other unions in the allied building trades have taken steps to require night school attendance of their respective apprentices.

High enrollment figures for the year are also reported by the Department of Heating, Ventilation and Sanitation where courses in plumbing, welding, and estimating have attracted about 75 students ranging from apprentices to contractors.

Evidence that many skilled tradesmen in various industries are ever waiting for educational opportunities is seen at Carnegie Tech by the unusually high registration of journeymen sheet metal workers for courses in the sheet metal department. For the first time this year, this department announced a group of special courses for journeymen workers, with the result that the majority of the students this year identify themselves as journeymen.

In the courses in masonry and concrete work, the percentage of expansion over last year has been equally high commensurate with other building construction departments. This division reports more than 30 students.

Adherents to the desirability of "the white-collar job" may find some consolation in the fact that the more than 50 students registered in structural drawing, and an equally large number enrolled in architectural drawing, represent substantial increase, also; but according to Dr. T. S. Baker, President of Carnegie Tech, many of the drawing students are skilled craftsmen.

Although the increase in night students this year in the Industries College is unusually large, similar degrees of expansion, it is reported, have occurred in the College of Engineering, and in the College of Fine Arts. The new students in the Engineering College are made up largely of high school graduates who have been denied the opportunity to attend college in the day-time, and are taking night engineering courses, as the next best thing. Several departments in the Fine Arts College have found it necessary to curtail enrollments, in order to keep classes within capacity.

#### THE BUILDING SITUATION

What is the present status and what does the future promise? This is a question that every building material supply dealer has been asking for the past few months. To answer this is not an easy matter because any kind of a forecast would only be a guess. There is probably no other basic industry that is subject to such erratic changes as the building industry. For this reason a prediction may be changed over night. There

are guesses and guesses, however, and the most logical forecast seems to be the following, which is taken from a recent bulletin issued by the Standard Statistics Co., one of the largest and most reliable organizations of its kind in the country:

#### *Building Needs Still Large*

"There are, according to reliable estimates, 50 cities in which building could continue at about 25 per cent. above normal for 10 years before catching up with the war and post-war deficit. A recent survey of representative cities by the National Association of Real Estate Boards reported a housing shortage in 67 per cent. of these cities, with the rents still rising in 53 per cent. of them. These figures check with responsible assertions regarding the demand for money for building purposes; the demand is good. The supply, furthermore, is also good.

#### *Construction Costs Will Remain High*

"Of course, it must be recognized that construction costs are roughly 100% above the pre-war level, against a general average of wholesale prices but 50 to 60 per cent. above the same level. Both building materials and wages in the building trades are 'out of line!' But this irregularity has causes that cannot be removed suddenly, if at all.

"Lumber, for instance, will remain high because it must come from remoter and less generous forests. All building materials also must pay higher freights until the slow process of reducing transportation costs is carried through. The coal that is used by manufacturers of brick, glass, builders' hardware, etc., is more expensive than before the war by at least 75 per cent. And most of all, there is the factor of limited man power in the building trades.

#### *Probably Slow Decline in Costs*

"It will take time for these fundamental conditions to undergo a substantial change. Meanwhile the costs of building will decline but slowly, and in very irregular fashion. Real 'stabilization,' except for brief periods, is hardly to be expected for some years.

"Consequently, the best policy for those who contemplate building is to be bold, yet patient. Build when you are ready, unless there happen just then to be signs of a run-away market.

"You may save something by waiting, but you will have to wait a long time in order to save very much.

"You may lose something by going ahead, but this loss is very likely to be spread out slowly over the years. Against this possible loss the home owner will set off the use of his home in the meantime, and the business man will set off the chance to use his building in making business profits that must be made tomorrow if they are to be made at all."

—*Atlas Almanac.*

## THE IMPORTANT FACTOR OF SAFETY FROM FIRE

*The Small Home With a Fire-Safe First Floor is Now Within Reach of the Average Owner*

According to reliable statistics, the one place where fireproof construction is most needed is the place where it is slighted the greatest. We have reference to the small home.

We have been accustomed to reading the advertisements which state that this hotel, that office building, bank, theater or mammoth apartment is of fireproof construction and, therefore, safe for occupancy. On the other hand it is very seldom that the average home-builder constructs his home with that object in view.

Why build a fire-safe home? Statistics show that at least two-thirds of the total number of fires in this country occur in houses, flats and apartments. Add to this cheerless bit of news the fact that about 38% of these happen at night and are given a chance to obtain great headway, and you have the answer to the question.

It would be difficult to design a structure more susceptible to flames than the ordinary dwelling house and when the numerous possibilities of fire are considered, it is no wonder that dwellings can be blamed for such a great part of our stupendous national loss by fire.

The high cost of fire-resistant construction in the past, however, was to a great extent responsible for this laxity in building, but with the advent of pressed steel joists and metal lath, the costs have been so reduced that every home builder can now be assured of maximum fire protection at a cost within his means.

As the result of an extensive research, the United States Geological Survey announce that 74% of all fires originate in the interior of buildings, and the National Fire Protection Association elaborates further with the statement that the majority of these inside fires are caused by steam pipes, hot-air ducts, furnaces, gas meters, water heaters, hot ashes and other appliances located in the average home almost exclusively below the first floor.

It is very evident, then, that if these fires can be confined to the place of their origin, the chances of a serious fire are very slight. Working upon this theory, builders have, through the use of steel joists and metal lath evolved a fire-resistant blanket for basement fires that will reduce to a minimum the hazards of dwelling house fires.

The fire-safe first floor, as it is termed, being composed of pressed steel joists and metal lath offers a very light dead-weight type of fireproof construction. Such a floor entirely eliminates wood forming. After the joists are placed in

position, metal lath is clipped to them and a thin concrete slab is spaded onto the lath as a comparatively thin mix, the lath acting as centering and reinforcing for the slab. Where a wood-finish floor is desired, nailing screeds are run lengthwise with the joists, and the concrete leveled off even with the screeds, thus offering a nailing surface for the wood flooring.

Because of the efficiency and economy of this type of construction, it is the duty of architects, engineers and contractors to help the prospective home owner guard his dwelling against total destruction, by advising him how steel joist and metal lath first-floor construction is the greatest fire insurance he can put into his home.—*Right Angle.*

## FIGHT THIS SACRIFICE

Did you know that every minute of the year we pay out \$1,000 for fire losses, and that one human life is consumed by flames every half hour? A thousand dollars a minute—two lives an hour—a terrible toll and a needless one.

It has been estimated that 1500 fires break out in the United States every twenty-four hours. Every one of these fires is caused by some improper condition, usually one which is the result of negligence, and which can be removed with little or no difficulty.

Anyone who allows rubbish to accumulate in or near a building is just as negligent as he who carelessly tosses his glowing match into the pile. Electric irons and other applicants, when left turned on, cause many fires. The use of wooden boxes for ashes is like sending an invitation to the nearest fire station. Metal containers for matches and for oil mops and dust cloths will prevent many fires. Eighty-five per cent. of all fires are preventable—that is, are the result of downright carelessness. Every owner can help cut down this waste by removing these causes around his property.

The exclusive use of fire-safe structures would cut our fire loss to but a fraction of its present figure. And when confronted by the fact that fire-safe construction, such as concrete in various forms as well as other types, costs but 3 to 5 per cent. more than inflammable construction no building owner can justify himself in risking a contribution to our already tremendous fire loss, to say nothing of our sacrifice of human lives.

—*Portland Cement Association.*

**Ideals are like stars; you will not succeed in touching them with your hands, but like the seafaring man on the desert of waters, you choose them as your guides, and, following them, you reach your destiny.—Carl Schurz.**

## CONCRETE DANCE FLOORS

A satisfactory surface for dancing is usually obtained by giving an existing concrete floor one of the following simple treatments. However, a more perfect surface will be obtained by first grinding the floor with a floor surfacing machine.

1. Liquid soap applied to a floor in the form of a lather and rubbed into the pores with a scrubbing brush will, after repeating the process, produce a uniform, smooth surface. An occasional application of powdered soap to a floor thus treated will keep it in fairly good condition for dancing. If the floor is somewhat rough and porous several coats of the soap treatment will be needed.

2. A mixture of paraffin wax and turpentine may be applied to the floor in sufficient quantity only to fill up the pores. An excess of the material would produce a sticky film. Both turpentine and paraffin wax should be of a good grade and no more paraffin used than will be completely dissolved in the turpentine. After the turpentine has evaporated, that is, after the floor surface is dry, it should be treated with powdered wax in the same manner as for a wooden dancing floor.

3. Paraffin wax may be driven into a concrete floor by heating the floor and treating it with melted paraffin wax. The object of heating the floor is, of course, to obtain penetration of the wax. The turpentine in No. 2 above is used as a carrier to get the paraffin to penetrate into the concrete surface.

## INDUSTRY STANDARDIZES SIZE OF CONCRETE BLOCK AND BRICK

At a recent meeting in Chicago, attended by practically every manufacturer of concrete block and brick machinery in the country, definite action was taken in the matter of standardizing sizes of concrete brick and block. For the former, the size adopted as standard is 2¼ by 3¾ by 8 inches; the same as that adopted for common brick in the clay industry and recognized as a standard by the U. S. Department of Commerce and leading technical organizations. For concrete block the measurements adopted were 7¾ by 15¾ inches for the face, and for the thickness, 6, 8, 10 and 12 inches, according to wall requirements. A representative of the U. S. Department of Commerce was present at all sessions in conference and participated in the discussions which led to the above size standard.

**The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.**

## As The Editor Sees It

### U. S. AGENTS REPORT CONDITIONS

*Department of Labor's Observers De-  
clare Continued Building Activity  
is General*

Workmen engaged in construction activities are assured of steady employment for "some time to come," according to the September bulletin issued by the Employment Service of the Department of Labor.

Continuing, this bulletin, compiled from telegraphic advices received from the department's agents throughout the country, says:

"There were no signs of the much-heralded slump in building activity which was anticipated for the fall months, and building construction is maintaining a steady pace in practically all the larger cities. In some sections already large construction programs were considerably augmented by the letting of new contracts. Continuation of state road construction work throughout the country affords employment to tremendous numbers of semi-skilled and common labor, and very little unemployment is reported in any district."

Extracts from various district reports follow:

New England: Extensive building program and road construction affords employment for many workers, with a shortage of certain building-trade mechanics reported. Inadequate housing conditions

exist in many sections, especially in the larger cities.

Middle Atlantic: Industries manufacturing building supplies are operating at capacity and have sufficient orders to afford steady employment to all workmen in their lines throughout the fall and winter. NEW YORK CITY'S shortage of skilled building labor is becoming less acute, though there still is a shortage of tile setters, steam fitters and plasterers. Building continues brisk in the large cities and suburban sections of NEW JERSEY, with building and construction labor in increasing demand. PENNSYLVANIA'S building construction is fairly well balanced. On the whole, building-trade workmen are well employed.

East North Central: ILLINOIS' state building activities which slowed up considerably during the mid-summer months, are reported as swinging ahead, with every indication of again resuming proportions of a building boom, and with an acute skilled labor shortage existing. There has been some decrease in building in INDIANA, but the totals for this year will far exceed those of 1922. Building in WISCONSIN is reported as more active than in mid-summer, and it seems reasonably certain that a large volume of construction work will be carried on through the winter. OHIO'S building conditions are "in good shape" and the indications are that strong activity will continue right up to the point

where cold weather slows up the program.

West North Central: Building chances are plentiful in MINNESOTA, due largely to curtailment of construction activities. Operations have fallen off in the larger centers of MISSOURI, with the exception of St. Louis, which has brought about a surplus of skilled workmen, though common labor remains in good call, particularly for road projects. IOWA reports conditions practically duplicating those found in MISSOURI, and common labor for road work also is in good demand in SOUTH DAKOTA. Building tradesmen are plentiful in NORTH DAKOTA, following completion of many construction jobs. Building in NEBRASKA is especially brisk, with all skilled workers engaged.

South Atlantic: Continuation of the "tremendous building program" reported from DELAWARE sections is noted, and MARYLAND reports practically all skilled building tradesmen employed, with a strong demand for common labor on road projects. The "enormous" construction program of the DISTRICT OF COLUMBIA continues unabated and is absorbing all available workmen. The supply of labor in WEST VIRGINIA and VIRGINIA also is absorbed, and similar conditions are reported from GEORGIA and FLORIDA.

East South Central District: A slight slackening is noticed in KENTUCKY'S

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS CO.**  
1729-31 Sansom Street Philadelphia  
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

building activities, and highway construction shows some reduction in force. TENNESSEE'S building continues at a steady pace with some relief in the road labor shortage. All building trades craftsmen are employed in ALABAMA, and MISSISSIPPI'S additional highway construction is employing more labor, with an adequate supply.

West South Central: Building in LOUISIANA shows no appreciable fluctuation, with a moderate excess of craftsmen reported in principal centers, and ARKANSAS reports a seasonal falling off in construction. OKLAHOMA reports a slight pick-up in building, although supply still exceeds demand of workmen in nearly all the trades, and closely similar conditions are noted in TEXAS.

Mountain: NEW MEXICO reports building moderately active, with a large highway construction program under way. Increasing activity is the word from ARIZONA, where building mechanics of all classes are in strong demand. Favorable weather conditions in UTAH have permitted continuance of road work, and building activities in large centers is reported as "exceptionally active." A sufficiency of building craftsmen is noted in WYOMING. Twenty-three highway projects are under construction in NEVADA, with others soon to be undertaken or made the objects of advertisements. A shortage of building labor is observed in IDAHO, and the same condition is reported in some sections of MONTANA. Work on the portals of the 6-mile Moffat Tunnel and other projects in COLORADO is making a steady bid for labor.

Pacific: Building in CALIFORNIA has decreased gradually, with a shortage of plasterers, bricklayers and tile setters still in evidence. A drop in construction work in OREGON also is reported, while a similar condition in WASHINGTON has not yet had sufficient effect to cause unemployment, it is stated.

The torrents of rain last Tuesday did not deter the determination of the Masters in the Building Industry who are members of the Philadelphia Builders' Exchange and Employers' Association from going through with their Fall Outing at the Lu Lu Temple Country Club as planned. The golf schedule, in which fifty golfers were entered, with their handicaps, to play the Lu Lu course for prizes offered by the Builders' Exchange for the low metal score, of course, had to be postponed. This was a great disappointment, but the Builders' Exchange members had no trouble entertaining themselves with the indoor games provided by trying their luck at pool, bil-

liards, cards and the interchange of good fellowship with one another.

A six o'clock Beef Steak Dinner was a special feature of the Outing, which was followed by a Vaudeville entertainment of a high order.

The attendance was especially good, considering the stormy weather, there being 120 members present at the Dinner and Entertainment.

Amos Y. Leshner, the new president of the Builders' Exchange, spoke briefly on the work of the organization, and Thomas F. Armstrong of the Entertainment Committee presided at the evening's entertainment.

### SHOWS OVERBURNED LIME IS CAUSE OF "POPPING" IN PLASTER

Lime which has been overburned or which has been burned during hydration is the cause of popping of plaster, tests made at the Bureau of Standards have shown. In this type of failure small particles appear to expand and push themselves out of the plaster, leaving tiny holes. In extreme cases these holes may be sufficiently large or numerous to be unsightly. It has been shown that popping will not be serious if the lime is ground fine enough to pass a number 50 sieve, as in that case the lime will be completely hydrated during the mixing and application, or else the particles of defective lime will be too small to cause noticeable holes.

These tests were made in co-operation with the National Lime Association, the Contracting Plasterers' Association, and the International Plasterers' Union. Ninety-eight panels were erected containing different impurities in different sized particles. It was found that, with the possible exception of sand, impurities other than overburned lime did not cause popping no matter how coarse they were.

The Charles H. Robbins Co., Blue Prints, Blue Print Papers, Drawing Materials, Artists' and Architects' Supplies, Surveying Instruments, Transits, etc., for many years at 1209 Arch Street, Philadelphia, has removed to their new building at 1729-31 Samson Street, Philadelphia.

The rapid growth of the Robbins' business necessitated more extensive quarters in closer proximity to the architectural and building center.

A much larger stock and a complete line of supplies for architects, contractors and builders is now on display in the new sales and stock rooms in connection with the offices at the above address.

The architectural and building trades are cordially invited to call and inspect the new headquarters.

Owner taking bids due November 30th.

**Memorial Library,** Newark, Delaware. Architects, Day & Klauder, Franklin Bank

Building, Philadelphia. Owners, Delaware School Auxiliary Association, Dupont Building, Wilmington, Del. Brick, stone, steel, concrete, 2 stories and basement, 83x188 feet, slate and slag roof, marble and linoleum floors, central heating, electric lighting. Owners taking sub-bids.

## WINTER-BUILT CONCRETE *Economy of Winter Work*

A distinct advantage is often gained by carrying on structural concrete work in the winter months. Construction work begun in the late summer or early fall may safely be continued throughout the winter. Builders and prospective owners need not hesitate to start construction during this period regardless of weather conditions.

Contractors have found that the cost of winter construction is from 3 to 10 per cent. greater than the same work would cost in summer, but certain advantages of winter construction frequently offset a part or even all of the additional cost so that the net results may prove an actual saving in construction. The material for the work can often be supplied in winter to the best advantage. Labor is more abundant and efficient and the project can be manned with the best of the labor market. There is also the important additional advantage to the owner of having the building ready for occupancy at an earlier date, as explained more fully in the paragraphs immediately following.

### *Earlier Use of Structure*

Frequently it is imperative to have a structure completed and ready for use at the earliest possible date. Schools, residences, apartment houses, office buildings and hotels are usually needed by a certain date. Earlier occupancy of such structures is of prime importance also from the investment standpoint.

Money provided for building construction earns nothing for the borrower until it is represented as an investment in a completed structure, either rented or occupied by the business for which it is intended. It is often penny-wise and pound-foolish to delay the construction of a needed concrete building because of cold weather, for the extra cost of construction in winter would often be more than offset by the interest saved on the money provided for its construction. The bonus or royalty often paid for the completion of a building before a specified time is tangible evidence of the value placed upon early occupancy by large corporations.

### *Fundamentals of Cold Weather Concreting*

In order to place concrete successfully in cold weather, it is necessary to follow the methods and observe the precautions outlined here. The fundamentals of these materials are easily comprehended by an

understanding of the action of concrete in hardening.

Hardening of concrete is not a process of drying out, as some people suppose, but is a chemical reaction between the cement and the water used in the mixing. Two things are necessary for proper hardening—namely, warmth and moisture.

Low temperatures will retard the hardening of concrete, extreme cold will prevent it altogether. Since water is necessary for the chemical action of hardening, evaporation of the water used in mixing the concrete must be prevented. This is often done by keeping the surface covered with wet sand, saw dust or burlap. As the temperature is lowered and the moisture content is reduced, the gain in strength and the entire hardening process become much slower and practically cease when the temperature of the water used in mixing falls to the freezing point.

There is no certainty that newly placed concrete that has been frozen even once, and has then been thawed out and protected from further freezing until final hardening has taken place, will ever attain its full strength. The only safe practice is to protect freshly placed concrete as soon as possible, before it has time to freeze. If alternate freezing and thawing occur several times, the concrete will be seriously injured and may have to be removed. Concrete that will be subjected to abrasion, as in floors and pavements, should under no circumstances be allowed to freeze at all. The exact period that may be allowed to elapse between placing concrete and subjecting it to freezing temperature cannot be definitely stated because of the influence of unknown variations in temperatures and other conditions. Experience shows that this period should never be less than 48 hours, and if the outside temperature averages below freezing, 3 to 5 days should be allowed.

### *Methods for Winter Work Heating Materials*

Since warmth and moisture are required for the proper hardening of concrete, cold weather work should be planned with those necessities in view. Both the mixing water and the aggregates should be heated. The cement forms but a small portion of the concrete and need not be heated, but it is well to keep it in a warm place for a few hours before it is used.

The nearer the temperature of the water is to the boiling point the better will be the results because it will take longer to dissipate the heat and cool the mixture. There are several types of water heaters that can be used, but the most common method of heating is to pass steam into the water tank. The concrete should be mixed with the least

amount of water practicable to produce a workable, plastic mixture. An excess of water must be carefully avoided.

Many methods are used for heating aggregates. A simple method is to use a length of iron pipe, an old boiler, or any metal cylinder over which the sand, broken stone or pebbles can be piled, and in which a fire can be built. Care must be taken to heat the fine and coarse aggregates separately in order to avoid premixing them in wrong proportions. As this method entails rehandling the aggregate, and as the aggregates nearest the heater may be affected by excessive heat, the use of steam pipes is generally preferred.

Steam heating is a more expensive method and requires a steam boiler, but on large jobs this method is usually advantageous because the steam may also be used for other purposes. A practical method is to use a perforated steam pipe with a pointed end which can be worked into the piles of aggregates. To reduce loss of heat the piles of aggregates should be covered with tarpaulins.

If the materials are heated as above outlined, and the concrete is deposited immediately after mixing, its temperature when placed in the forms will be around 80 degrees F. and if care is taken to prevent too rapid loss of this contained heat, the concrete will harden properly. The early stages of hardening may be even more rapid than under ordinary conditions.

#### *Heating the Forms*

The forms must be free from snow, ice and frost, and should also, if possible, be reasonably warm, especially in the case of metal forms, which will absorb heat from the concrete rapidly. Live steam is an effective agent for cleaning ice and snow from the forms, and warming them. It should be used just before the concrete is placed.

#### *Protection and Supplying Heat While Hardening*

A rapid loss of contained heat must be prevented. Protect the concrete while hardening so as to maintain the warm, moist condition essential for the rapid development of strength. There are many methods of doing this: the most common is an enclosure of canvas or tarpaulins. In mild weather this alone may be sufficient, but when the temperature drops below the freezing point, some means should be provided for heating the enclosure. Steam escaping from perforated steam pipes around the concrete will give the best results, because the steam saturates the air and prevents evaporation of moisture from the concrete.

Coke salamanders or stoves are often used when steam is not available to supply warmth to the enclosure, but large pans of water should be placed over them in order to provide as much moisture in

the air as possible. Care should be taken not to have these stoves or salamanders so close to the concrete as to dry it out in spots. An even temperature of at least 60 degrees F. should be maintained at all times in all parts of the enclosure. To maintain this temperature within a properly housed enclosure during cold weather, with good coke properly handled, one salamander will be required for every 300 to 500 square feet of floor area.

The most common practice is to build inclosures of tarpaulins, overlapped so as to prevent rapid escape of heat, about two stories being inclosed at one time. Undoubtedly a better method was the one followed in the winter of 1922-1923 in the construction of the Keenan Hotel, a 14-story reinforced concrete building in For Wayne, Ind. Five stories were inclosed at one time. This prolonged the length of time during which freshly placed concrete was kept warm and resulted in complete hardening before the protection was removed.

A more substantial form of protection is the complete wooden inclosure. The Majestic Building in Milwaukee, was built under a complete inclosure of tarpaulins supported on frame-work. Complete inclosures necessarily cost more than temporary ones that protect only a few stories at a time. Their great advantage, however, consists in the fact that they protect the workmen of all trades and speed up the work from beginning to end. Furthermore, when once built they require no shifting.

The complete inclosure idea was followed in the construction of the three-span reinforced concrete arch bridge over the Little Goose River, in Wyoming. A large tent covered the entire bridge site and permitted construction during severe winter weather when the stream was solidly frozen over. The cold weather, in fact, eliminated trouble from running water and actually speeded up the progress of the work. Fires were kept going in stoves with smoke outlets extended through the top of the tent. During the placing of concrete a heavy snow storm, followed by severe cold that lasted several days, tested the effectiveness of the tent. The protection proved equal to the emergency.

For retaining walls and similar structures a light roofing paper envelope placed outside the forms with steam pipes at the bottom has proved satisfactory.

#### *Protective Coverings*

When it is warm during the day with a temperature drop close to the freezing point at night, floors, pavements and foundations are often protected by covering with straw, hay or other material with satisfactory results, but such covering should not be relied upon during protracted low temperatures.

Even though the outdoor tempera-

ture may not drop to freezing, protection is necessary to prevent the concrete from losing the heat introduced by heating the materials, and insure proper hardening. At low temperatures the heat developed by the chemical reaction of the cement and water is too small to be safely relied upon except in large masses underground. Even in those cases the materials should be heated and the surface protected.

Thin structural members and floors have such a large surface area in proportion to their size that the heat within the concrete is dissipated rapidly, and therefore protection must be provided. Recent inspection of several concrete floors placed during the winter of 1922-1923 disclosed the fact that the top surface was inadequately protected after being placed. On one floor in particular it is known that the top surface was placed during cold weather and no protection whatever was provided. It was permitted to freeze almost immediately after it was placed, and it is probable that it froze and thawed several times before it hardened. The result was an unsatisfactory wearing course which in many places must be removed and replaced. Work of this kind should be protected with canvas, supported slightly above the surface, and with live steam forced under the canvas. The steam has the excellent characteristic of providing both heat and moisture, both essential in obtaining the best results in the hardening of concrete.

#### *Use of Salt or Calcium Chloride*

The practice of adding "anti-freezing" compounds such as sodium chloride (common salt) or calcium chloride solutions to the concrete mixture is not generally recommended. Under no circumstances should they be depended upon to prevent freezing below 22 degrees Fahr., and they should never be considered substitutes for protection and heating.

Calcium chloride in quantity not exceeding 4 per cent. by weight, of the mixing water is a better anti-freezing agent than common salt. It accelerates the hardening of concrete to some extent, while salt retards hardening. Salt has a tendency to corrode reinforcing steel, and may cause efflorescence, which is unsightly on exposed surfaces.

Even if anti-freezing solutions are used, the aggregates and mixing water should be heated to remove ice or frost.

#### *Application of Load*

Too early removal of forms is always to be guarded against even during construction in favorable weather, and great caution should be observed in placing loads upon cold weather concrete. Especially is this true of walls, roofs and floors above ground, which carry loads other than their own weight.

Before removing forms the concrete should be examined to see that it has

properly hardened and not frozen. A reliable test is to apply heat to the surface by means of a blow torch or a jet of hot water or steam against it. Frozen concrete will be disclosed by softening as it thaws out, but if properly hardened, the concrete will be unaffected by the application of heat.—*Portland Cement Association.*

## LONG, LONG AGO

Building a castle in the Middle Ages seems to have been a lark compared with building a six-room house today. A lark, that is, for the builder. Strikes were known, however, at that comparatively early day, but they were few and far between. From 1150 A. D. on, paid laborers, rather than monks, constructed the cathedrals and castles, receiving wages that—based on the purchasing power of a dollar today in the United States—would approximate from \$1 to \$2.50 a day. The Master Builders received from \$3 to \$4 a day, depending on the locality and the disposition of their employers. In the 15th century, at the building of St. George's at Windsor, the architect is reported to have received the sum of \$6 a day for his work.

One of the earliest recorded strikes is described in the biography of St. Stephen

of Obzine, who was directing the work on a great Church of utmost importance. The sainted man and the Cistercians in his charge were vegetarians, and they insisted that the paid workmen should subsist on a vegetarian diet also. For a while all went well; but then the laborers clandestinely bought a pig, roasted it, ate half, and hid the remainder. St. Stephen, on learning of the outrage, called his elders together and asked them their advice as to what should be done. They counseled leniency, since the men had never taken the vows of the order, but St. Stephen was firm. The workmen intimated that if they could not have meat when they desired, they would not work. St. Stephen responded by threatening to hire other men in their places—an early example of lockout. After some argument the men again took up their tools, and subsisted on the diet described completing the work "in good order." With all the building that was going on at this period of history, there was no shortage of labor, and discipline was very strict. Men traveled from place to place with their families, living in the squalid inns of the day; having fresh meat to eat only when it was killed in the neighborhood or when the weather was cold enough to preserve it. In Willis and Clark's history of the University of Cambridge there is the statement that "discipline was very strict and system of fines was imposed, by which men who misbehaved themselves lost a whole day, or a half day, for each misdemeanor. A few of these may be cited: 'for he lost a showell'; 'for late coming'; 'for telling of tales'; 'for childing'; 'for fighting'—(half day); 'for breaking of shovel'; 'for playing'—(whole day); 'for keeping of the hole owre'—(half day). This was probably the dinner hour, and the strict observance of it by the men seems to have been a grievance with the clerk of the works, for Robert Goodgrome is fined 'for he would kepe his ouris and never go to werke till the clocke smyte.'" Robert evidently lived about a thousand years before his time.

Even the professional men of that day often had hardships to bear. This was particularly true of an architect named Lanfred, retained by a certain Countess of the Bayeux and Ivry. It is written in this connection that "Men say that the countess aforesaid caused the castle to be built by the architect Lanfred, whom she created Master of the Works, after the building of the tower of Pithiviers, a man whose skill was praised far beyond that of any other artificer of his time in France. Then, when Lanfred had completed the castle of Ivry with much labor and at great cost, she caused him to be beheaded lest he should build another equal to it elsewhere."—*Commerce and Finance.*

## As The Editor Sees It

### STATEMENT BY FRANKLIN D. ROOSEVELT AS PRESIDENT OF THE AMERICAN CON- STRUCTION COUNCIL

Urging all those interested in building projects in the near future to undertake such work so far as possible at an early date in order to take advantage of the usual slackening of demand for materials and labor during the winter months and in this way avoid a possible building crisis in the Spring, the American Construction Council recently made public through its President, Franklin D. Roosevelt, the resolutions adopted at the recent annual meeting of the Council in regard to the condition of the building industry generally. In addition Mr. Roosevelt announced the particular program of action for the coming year which was decided upon at that time, subject to the approval of the Executive Committee, which includes very definite aid to be rendered by the Council in securing apprentices in certain of the building trades, and the establishment, through the support of the Council, of local so-called "building congresses" throughout the United States modeled on those which have proved so successful in New York City, Boston, Philadelphia, and Portland. Mr. Roosevelt, in giving out the statement said:

"The American Construction Council, considering the fact that it is entering an entirely new field and embodies an en-

tirely new idea in associations, has made, in my judgment, splendid progress during the past year. I feel that its appeal for support from the public and from those associated in the building industries has been well justified by the work it has already done and will be increasingly justified in the future. I have devoted much time in the past year to the affairs of the Council, the work of which has grown very greatly, and the action of the Council at its late meeting in appointing Mr. D. Knickerbacker Boyd, President of the Philadelphia Building Congress as Executive Vice-President, and Mr. Dwight L. Hoopingarner, formerly Executive Manager of the Cleveland Trades Employers' Association, as Executive Secretary, gives me and the Executive Committee the needed able support of competent men of national standing to take up the additional burdens which are constantly falling on our shoulders. The annual meeting brought a surprisingly large attendance from all over the country and the discussions which followed covered practically all problems in the building industry.

"As the main effort of the Council is to bring together for the first time all persons or organizations interested in construction or the manufacture or supply of materials for construction, together with the labor that enters into construction, and to act for them in bringing to the attention of the public what is

needed to keep on a fair basis the costs of construction in this country, it was the unanimous opinion of those present that local get-together associations in practically every state in the United States is an essential step in this work. The National Congress of Building and Construction Industries, under the able leadership of its President, Robert D. Kahn, of New York City, had already inaugurated this movement and the practical method decided on by the Council to secure this local co-operation was embodied in a resolution by which the American Construction Council not only pledged itself to support and aid the creation of local building congresses in every possible way, but authorized the Executive Committee to expend from such funds as might be secured, money up to \$25,000 in assisting in this work. By this co-operation the American Construction Council

will secure local associations of those interested in the construction industry and the local building congress will find in the American Construction Council a national organization which will act as a medium of interchange of ideas between them.

"It was also brought out that there is a real scarcity of skilled labor in several of the building trades which made it impossible to secure workmen in many localities during peak periods at any price whatever. In other trades, the Council has already discovered a local shortage

**DRAWING  
MATERIALS**

PRINTS**

in one place and a local surplus in another. In such cases, rather than encourage new apprentices in the trade, the efforts of the Council will be devoted to adjusting these conditions. One of the most immediate and effective ways of remedying these conditions is of course securing young men to enter the trades where there is a real national shortage. Accordingly the Council has by resolution undertaken as part of its program for the year the encouragement of the establishment and strengthening of schools for apprentices throughout the country and the securing of desirable pupils therefor in every way that lies in its power. For this purpose a Committee on Apprenticeship, Vocational Guidance, and Craftsmanship, of which Mr. F. W. Walker, Secretary of the Associated Tile Manufacturers of Beaver Falls, Pa., is chairman, was directed to co-operate with employees' and employers' organizations and with educational bodies, local and national, in providing for apprenticeship training. As an additional step, the Council having received a number of communications from young men desirous of entering a trade but not knowing how or where they could secure the technical education, has decided to use its good offices in helping young men desirous of taking up a trade to find a vocational school where they can secure the educational knowledge necessary to become apprentices therein. I am accordingly directed by the Executive Committee which has just held a meeting at my office to request the press to announce that any young man desirous of securing a vocational education in the building trades without knowledge of how to go about it will upon application to Dwight L. Hoopinger, Executive Secretary of the American Construction Council, 28 West 44th Street, New York City, receive the assistance of the Council in finding a school adapted to his requirements, and that the Council will also gladly hear from all vocational schools or classes in vocational training of public schools stating their requirements for admission and such other details that will enable the Council to refer applicants in their vicinity to them for instruction. The obvious danger of overmanning trades which have already plenty of apprentices has been recognized by the Council and the Committee on Apprenticeship, in addition to the information already on hand regarding several trades, will, under the resolution of the Council, carefully ascertain that there is a real shortage in a trade before recommending would-be apprentices to take up such a trade as their profession.

"A national crisis in the building industry led the American Construction Council to issue a statement in the Spring urging that for a few months unnecessary building be suspended. The result

of this announcement, I think, did much to prevent a possible very serious situation. A careful study of the present conditions has now been completed by experts of the Council and the following statement was prepared for issuance to the public:

"In the Spring of this year the American Construction Council advised the public of the desirability of curtailing construction work so that its volume would not be so great that the labor and material available could not possibly carry through. Had the larger volume been undertaken it would have resulted in raising the cost of construction to prohibitive prices which would have caused a break such as occurred in 1920. This happily has been averted. The result of this advice, together with the co-operation of others, was that a large volume of construction work then under contemplation was not undertaken and the prices of construction did not rise to the breaking point.

"Having in mind the great desirability for a longer working year in the construction industry, the benefits of which could accrue to the public, the contractors, the manufacturers, the transportation companies, and the various trades, and which would be helpful in reducing the seasonal peaks of construction activities which are conducive to increased costs, and further recognizing the general tendency at this time of the year to defer building projects until Spring, the American Construction Council suggests that cognizances be taken of the following:

1. "Maintenance, repairs, and alterations of existing structures, through long custom rather than through any other reason are carried on during that portion of the year when new construction is most active. It will be in the interests of all concerned to do such maintenance work as is possible during the closed season and now is the time for owners and managers to give this full consideration.

2. "Miscellaneous new construction that should not take more than four to five months to complete can ordinarily be undertaken in the Fall and carried on under more advantageous conditions which will result in satisfaction all around, at the same time giving continuous employment to workers who might otherwise be idle.

3. "There appears to be a continuing demand for construction of large projects. It is perhaps too early to predict that this will result in an abnormal demand for labor and materials next Spring, yet there seems to be such a trend. Therefore, until the season is further advanced and this can be determined more definitely, the situation in many localities suggests caution as indicated in the report of the American Construction Council

## Proposal

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., October 29, 1923. Sealed Proposals will be opened in this office at 3 P. M., November 27, 1923, for the construction of a one-story brick and tile non-fireproof Post Office building, approximately 62 by 64 feet in size, at Gallipolis, Ohio. Drawings and specifications may be obtained from the Custodian of the site at Gallipolis, Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.

### GOVERNOR'S MANSION AT KANAWHA, DUFFY AND VIRGINIA STREETS CHARLESTON, WEST VIRGINIA NOTICE TO CONTRACTORS

Sealed bids will be received by the State Board of Control at its office in Charleston, W. Va., until 2.00 P. M., Friday, December 28, 1923, for the furnishing of all labor and materials of every kind necessary in the completion of the building described below, according to the plans and specifications of Walter F. Martens, Architect, Charleston, W. Va.

The building is to be 73 ft. 6 in. x 81 ft. 2 in., with a service wing 58 ft. x 17 ft., and with additional areas for porches; semi-fire-proof construction; two stories high, with half basement and attic; walls brick, hollow tile; exterior walls faced with Colonial Red Brick; Vermont Marble and Indiana Limestone trim; slate roofing; built-up roofing on decks; structural steel and steel lumber; tile floors in halls, baths, toilets and porches, oak floors elsewhere; wood stairs on steel frames; trim Birch, Oak and Poplar; metal lath; Gypsum and cement plaster; wood sash, frames and doors; electric wiring, conduit system; intercommunicating telephone system; plumbing; vapor steam heating system; incinerator; vacuum cleaner.

Plans, specifications and blank form for bids will be mailed by the State Board of Control, when request is accompanied with check for \$25.00, which amount will be REFUNDED ONLY ON RECEIPT OF BONA-FIDE BID on or before the time named above, and the return of the plans.

Bids to be accompanied with certified check payable to the State Board of Control for an amount equal to 1% of the bid, as guarantee of good faith.

STATE BOARD OF CONTROL  
By JAMES S. LAKIN, President  
Charleston, Kanawha County, W. Va.

### HALL OF CHEMISTRY WEST VIRGINIA UNIVERSITY MORGANTOWN, WEST VIRGINIA NOTICE TO CONTRACTORS

Sealed proposals will be received by the State Board of Control, at its office in Charleston, W. Va., until 3.00 P. M. Friday, December 28th, 1923, for doing all work and furnishing all material necessary to complete the building described below, according to the plans and specifications, and the addenda thereto, prepared therefor by Paul A. Davis, 3rd, & Dunlap, Architects, Philadelphia, Pa.

The building is to be 305 ft. 7 in. x 79 ft., four stories, with basement and attic, with extension of one story and basement. Fire-proof construction except main roof, which is steel, wood and slate. Exterior of face brick with Indiana Limestone trimmings. Interior brick finished walls. Concrete ceilings. Interior wood finish of Oak. Interior partitions brick and tile. Stairs iron. Entrance vestibule marble and plaster. Floors of terrazzo, marble, tile, composition, cement and asphalt.

Plans and specifications, and blank form for bids will be mailed by the State Board of Control when request for plans is accompanied with check for \$25.00, which amount

will be REFUNDED ONLY UPON RECEIPT OF BONA-FIDE BID AND CERTIFIED CHECK, on or before time named above, and return of plans and specifications.

(Continued from Page 708)

of last Spring. However, such necessary construction as is to be done should be arranged for now and the preliminary work undertaken at an early date so as to gain the advantage of all favorable periods for progress between intermittent interruptions caused by inclement conditions and in addition relieve as much as possible the congestion that may come in the Spring.

4. "The American Construction Council is considering the economic aspects of the construction industry as they affect the people of this country as a whole and this statement is not intended to apply to those localities where the supply of labor is ample and weather and climatic conditions will permit construction work to go forward normally.

"While this covers all of the formal decisions of the Council, I think it is only right to announce that the present shortage in moderate priced homes for workmen and men of limited incomes such as has been shown to be peculiarly acute in New York City in the matter of low-rental apartments, is receiving the most serious consideration by the Council. It is our hope that the Council will be able to contribute to an amelioration of this condition. The problem requires further study before any definite announcement can be made, but if it is found, as I think it will be, that we can be of help, the public can rest assured that the entire influence of the Council through its far-reaching membership will be brought to bear upon a solution of this vital problem.

"As the officers of the Council are elected every two years, the present officers remain at the helm. In addition the following vacancies were filled at the recent meeting: Joseph H. Alexander, Vice President of the Cleveland Railway Company and John E. Lloyd, President of the Wm. M. Lloyd Company of Philadelphia, have accepted 'vice-presidencies in the Council, and Mr. Wright D. Goss, President of the Empire Brick and Supply Company of New York, has also accepted appointment as Assistant Treasurer of the Council."

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

## BACKBONE AND FINISH OF WOOD FLOORS

*Don't Count on Paint and Varnish to  
Take the Place of Sound Framing*

By ROBERT TAYLOR JONES, Technical  
Director Northwestern Division

(Reprinted by courtesy of The Architects' Small House Service Bureau of the United States from their official publication, *(The Small Home.)*)

Speaking of the construction of floors, let me say that a sound floor is obtained only if it is built upon a substantial framework of joists. These joists or floor beams must be reinforced against twisting and warping by being thoroughly trussed or "bridged" and this bridging must be run every six or eight feet of span of the joist.

Upon the joists thus reinforced is laid the subflooring. Subflooring is made of boards that are not too wide. Eight inches should be the maximum. If wider pieces are used subsequent warping may affect the finish flooring. Subflooring is laid diagonally across the joists so that the finish flooring can be laid at right angles to them, thus securing more rigid nailing. The diagonal flooring reinforces the cross frame and makes it possible for the finish flooring to run in one direction throughout a story.

Now this subflooring is often omitted through a misguided idea of economy. On the other hand, it is sometimes put on, but for the sake of saving a few dollars it is laid at right angles to the joists rather than diagonally to them. It is not difficult to support the argument that the joist system is practically as strong laid in this manner, but this is not the end of the story by any means. The finish flooring must run at right angles to the joists. That is a definite principle. But if the subflooring is run at right angles to the joists, then the finish flooring must run parallel to the joist or else parallel to the subflooring. In either case there is going to be sagging or cupping of the finish floors and generally bad appearance.

### Floors That Float

When the subflooring is run diagonally the finish floors can then run the long way of the room, which gives a very desirable effect. The recurrence of so many long lines in the floor such as are thus obtained has a tendency to increase the apparent length of the room to its advantage.

Above the subflooring should be laid paper, felt, or insulating quilt, depending upon whether it is desired only to keep out dust or to sound proof the floor. Where real sound proofing is desired it is customary to lay a quilt of the deadening material, and over this to run strips of wood midway between the joists. The

finish flooring is then laid over the strips and nailed thereto. The nails do not run into the joists and in consequence there is no definite connection between the finish flooring and the ceiling below. Thus sound is not carried through freely. Sometimes sound proofing is obtained by laying a course of the deadening material along the tops of the floor beams. The subflooring is then laid directly over this insulation, and the finish flooring follows with a course of felt or paper between the two floors.

#### *Quick Work—Better Floors*

When strips are laid under the finish flooring a space is provided for conduits or small piping which can be utilized to the advantage of the building. We think that the extra expense involved in stripping floors is well worth the cost, but it is not a necessary expense and one would not be justified in doing it if his funds were limited.

I can hardly be too insistent about the necessity of having all other work done, including practically all of the painting, before the finish floors are laid. Absolutely all construction work must have been completed, and wherever water has been used the work must be allowed to dry thoroughly before a single stick of the flooring is brought onto the job. You see the least dampness anywhere about the building will be readily taken up by the floor boards, and if this happens before they are laid some expansion takes place which no amount of tight driving can take up. When the floor dries, as it will at the time your home is heated, the boards will contract and leave cracks between them. All this can be avoided by following the principle I have given you—a dry building, all construction work done, the painting all but finished and very rapid laying of the floors—the quicker the better.

After the flooring is laid it must be prepared for finishing. This means a thorough scraping and sanding until all tool marks are eliminated and the edges of the adjoining boards brought down to a common plane. The modern method of dressing floors by means of a mechanically operated sanding machine has made it possible to do an almost perfect job of finishing, but this like other work about the house is often only half done. After the sanding—and this must be thorough, every corner being worked as carefully as the center of the room—the floors must be swept free of dust and sand as clean as they can be made. If the job has been well carried through not a fleck of dust will lie on the floor. There will be no mark from any machine, and the floor will be just as perfect as clean fresh boards can be. When this has been done the whole floor should be covered with

heavy building paper to protect it from damage until it can be finished.

#### *Protection and Decoration*

Do not wash the floor before finishing it to remove heavy stains unless it is absolutely necessary, and even then use only clear water. If you wash the floor with soap and do not get absolutely every bit of it out of the wood, which is almost impossible to do, the varnish will be ruined in the course of a short time.

If the floor has become soiled you should use every possible means to clean it by scraping and sanding. That is the only really satisfactory way. Any wash that is put on the floor to clean it up, even if it is clear water, is likely to cause some trouble later on, for then it is almost impossible to get the floor as dry as it should be.

But the blemishes must be removed. Dirt stains of any kind cannot be hidden by the varnish. In fact, they are accentuated by it.

The finish, whether it be paint, varnish, shellac or wax, is put on the floors to protect them. All wood floors must be protected from moisture and marring. The finishes that are put on the floors of residences combine this protective quality with that of decoration. That makes a special problem of such floors, for here is a part of the building that is designed definitely to take wear. The floors are to be walked on and scuffed over. Somebody is likely to come in with hob nails. Just the ordinary course of walking about the house in common shoes is bound sometime to make an impression on the finish coating if not in the wood itself.

#### *The Painter Makes Tests*

One of the best ways to protect the top of the floor is to protect the bottom of it. This may be done by the simple process of applying a coat of linseed oil to the under side of the finish flooring before it is laid. A good coat of shellac serves something of the same purpose, but oil is preferred. This helps to keep the wood fiber from absorbing moisture. It makes your floors more permanent.

As a matter of fact, the upper surface of the floor may be protected in the same way. One or two coats of hot linseed oil may be mopped on. However, the objection to this is that the oil darkens the floors. If you want a particularly light floor this process cannot be followed. In order to make sure of the effect that you are going to get, just have the painter oil a few pieces of flooring as a sample for you to see. He can also apply the other finish coats that you want, so that you will know definitely how your floors will finally appear.

When oak is used for flooring it should be "filled" before the finish coats are put on. This "filling" is put on for the purpose of levelling off the wood. Oak is

a porous or open grained wood and the nature of these woods is such that they cannot be sanded to an absolutely smooth surface. There are spaces between the fibers which must be artificially filled. For such woods when used as floors a "paste filler" is applied. This is wiped off smooth after it has started to set and is afterward sanded, leaving an absolutely plane surface on which to build up the final coats. Sometimes the coat of filler is stained to reduce the lightness of the floors. Do not get them too dark. Remember that they will work darker as time goes along. Close grain woods, such as pine and maple, do not require a filler.

If a stained effect is desired on either hard or soft floors, it should be applied in the form of an oil stain and afterward coated with a fine film of shellac. The shellac is used to seal the stain and to prevent it working up into the varnish brush. You cannot avoid using it in this particular place, but shellac is not a good material for floors that are not to be almost completely protected by rugs.

Shellac will not stand up under traffic. It is brittle—like glass, whereas a floor varnish must be tough and elastic. Sometimes a first coat of shellac is put on followed by a coat of varnish. This is not a good practice. If you are going to have a varnish finish, then put on two coats of the very best varnish that can be obtained. Three coats will be better and cheaper in the long run. You can have a high gloss or a dull finish as you prefer. The dull finish is obtained by using a flat varnish or else by rubbing the high gloss varnish with pumice and oil. The former method is less expensive, but the rubbed finish is more durable.

Be sure that it is neither hot or cold where the varnishing is done—that the wind is not allowed to blow directly on the drying varnish and that at least forty-eight hours is allowed between coats.

Wax floors are sometime preferred. They have a peculiar satin-like sheen which gives them an air of especial elegance. However, it must be remembered that a waxed floor requires a great deal more care to keep in condition than a varnished floor.

To begin with, wax floors are built up on oak by applying a coat of paste and then, for this particular finish only a very thin coat of shellac. Sometimes the shellac is omitted and a special oil is used in preference. The shellac coat is sanded and then two coats of wax are put on, each one being rubbed to a high polish with a heavily weighted brush. Additional coats of wax must be put on from time to time, especially where wear is greatest around doorways and so on, so that by the end of the year you should have accumulated several coats of wax

over the entire floor. Having built up this base, less and less waxing will be required as time goes on excepting in those places where wear is the greatest. Soft woods like pine and close grained woods like maple may be waxed immediately above the linseed oil coating—if that method is used. If a stained finish is to be obtained, then it must be sealed in either with shellac or else with one of the special coatings prepared by paint manufacturers for that purpose.

The waxed finish requires constant care and considerable hard work to keep it in satisfactory condition. On the other hand, varnished floors can be cleaned very readily. One of the best ways to do this is to wipe them up once a month with a soft cloth dipped in skimmed milk. This restores the original finish and makes the floors look like new. Of course the varnish cannot be expected to last indefinitely. The floor ought to be revarnished once a year. The application of one coat will not be expensive. Before the yearly coat is put on, the floors should be wiped up with clean water and allowed to dry thoroughly. Make sure that the drying is complete. Do not use soap if you can possibly avoid it.

The methods we have indicated here, if followed, will secure you a good job. However, certain manufacturers have perfected a special technique for each operation in which their materials are used. The guaranty supplied by these manufacturers is based on a rigorous observation of the processes they recommend. Your painter should be instructed to follow such advice as is given to the fullest extent.

You walk on your floors continuously. Have them right. See that you have good materials and good workmanship. We have seen many a floor that might have been fine, but which had been absolutely ruined by poor nailing, poor matching, poor finishing. You have a right to expect the best if you pay for it.

### 22,000,000 PEOPLE LIVE IN ZONED CITIES

More than 22,000,000 people, comprising 40% of the urban population of the United States live in 183 zoned cities, towns and villages, according to a statement made public by the Division of Building and Housing of the Department of Commerce.

During the first eight months of this year 54 municipalities, with more than 6,500,000 population, have adopted zoning ordinances. This indicates the greatest progress in zoning that has ever been made during a similar period. More than two-thirds of the 183 zoned municipalities have been zoned since September, 1921.

Neighborliness in the use of land is said to be the keynote of zoning. The home owner is protected from the intrusion of the junk yard which for no good reason might be moved into his neighborhood, and business and shopping districts are protected against noisy factories. Industrial plants have greater freedom in selecting sites convenient to good transportation. Such measures should provide for the use of the different kinds of land and districts within a city for the purposes to which they are best adapted, and allow for orderly growth of commercial and industrial districts. They accomplish their purposes by regulating the height of buildings, the area of the land that they may cover, and the use to which they may be put in the different districts of the city or town. The zoning ordinance is generally an auxiliary to the city plan, and helps to provide for the orderly growth of the city along lines that will bring the most satisfactory results to all concerned.

Revised figures show that on January 1, 1923, 129 municipalities had adopted zoning regulations. During the year 54 more, some large and some small, located north, south, east and west, have been added to the list. Of the 68 cities in the United States with over 100,000 population, 36 have zoning ordinances in effect. Chicago, Baltimore, Pittsburgh, Kansas City, Seattle, Providence, Columbus, Worcester, Grand Rapids and Youngstown are among the larger cities which have adopted zoning ordinances this year. The smallest community to adopt a zoning ordinance in 1923 had only 420 inhabitants, according to the last census. Twenty-one towns and villages of less than 10,000 inhabitants adopted zoning regulations in 1923. Seventeen communities with 10,000 to 50,000 population, and 16 cities with more than 50,000 population also zoned during the year.

In the number of places zoned, New Jersey leads with 51; New York is second with 30; Illinois, third with 23; California, fourth, with 17; Ohio, fifth, with 13; Massachusetts, sixth with 11; Wisconsin, seventh, with 10; and Missouri, eighth, with four. Indiana, Kansas and Michigan have three each; Rhode Island and Washington have two each; and Georgia, Maryland, Minnesota, Nebraska, North Carolina, Pennsylvania, Tennessee, Texas, Utah and Virginia have one each. The District of Columbia also is zoned.

More new state zoning enabling legislation has been passed in 1923 than usual, and the standard state zoning enabling act which was prepared by the Department of Commerce was used to a greater or less extent in most of the laws. Connecticut, Delaware, Iowa, North Carolina, North Dakota, Oklahoma, Pennsyl-

vania and Wyoming passed important zoning enabling acts, and a number of other states passed legislation supplementing or amending existing laws. The State of Wisconsin has passed an act granting to counties the power to zone.

The complete list of zoned municipalities, as of September 1, 1923, with references to the state acts under which zoning is permitted, may be obtained from the Division of Building and Housing of the Department of Commerce, Washington, D. C.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."

## As The Editor Sees It

### THE NEW ARCHITECTURE

*Temples of Mammon Supersede Those  
of Ammon*

BY HENRY S. CHURCHILL

The New Architecture is with us, inexorably forced upon us whether we will or not, by economic law. The relentless drive of economic necessity the governing law of modern, even if not, as some maintain, of all life has created and is creating the architecture of today in actual structural fact. Aesthetically, where that law has been accepted and expressed, we have a living art; where it has been denied and disguised, we have a dying art.

Architecture has always been a reflection of the age that produced it. The hope of Egypt, the clarity of Greece, the pomp of Rome, the faith of the Middle Ages, the license of the eighteenth century, the acquisitiveness of the twentieth are faithfully mirrored in the temples of the times, whether these temples be of Ammon or of Mammon. Nor is there any doubt that as the material side of life has developed more swiftly in the last hundred years than in all the preceding historic centuries, so the structural side of architecture, which corresponds to the material side of life, has undergone greater changes in the last generation than in any preceding period of its history. A hundred years ago New York was a charming, if muddy, city of red-brick houses with white doorways

and cast-iron balconies, spired churches, and low warehouses and wharves, situated on a rocky island. Farm-houses dotted the open spaces between the villages of Yorktown and Harlem, Manhattanville and Bloomingdale. The fateful shadow of the gridiron had not yet fallen across it. As population, wealth and ostentation increased, there came brownstone fronts in endless rows, and more and more massive office buildings. In 1880 the first elevated railroad trailed its blighting way out to Harlem, elongating the city, choking its cross-town expansion, relegating the river fronts, the city's natural outlets to air and beauty, to commerce and squalor. Land in the Battery section became immensely valuable. Investors and owners, endeavoring to squeeze every drop of increment from their land, found that by building higher they could get greater returns. The height limit, however, would have remained that of convenient walking had it not been for the invention of the elevator. With its advent vertical transportation became a reality and the skyscraper a possibility.\*

But limitations to the first high elevator

\*The first real skyscraper was erected in Chicago, but under analogous conditions. There high property values were artificially created by the elevated "loop," which still effectively strangles the city.

buildings were soon discovered. It was found that the increase in thickness of the bearing walls necessary to carry great height ate up rentable floor space too rapidly to make a very great number of stories profitable, and besides cut off too much light. To take the place of these clumsy walls, cast-iron columns came into use, and various systems of long-span fire-proof floor construction. These were gradually developed to relieve the walls of practically all weight but their own. As the steel industry developed, steel columns came into use on account of their greater strength. The steel shapes were slowly standardized for lightness, convenience of design, and most of all swiftness of erection. It was found that by riveting an angle to the wall-beams it was possible to erect masonry from floor to floor independently of a masonry base, or to start it on many floors at once. The self-supporting wall thus went out of existence, as the floor-bearing wall had gone before, and the true skeleton frame came into being. Walls became simple fillers between floors, without any structural value whatever. This permitted reducing them to the least thickness compatible with their staying in place and keeping the weather out, and not only saved space, but weight and, consequently, steel.

Just as steel frames and curtain walls came into being through economic reasons, so brick has largely replaced stone

as the material for those walls. Stone walls on a skyscraper are an anomaly. They do not carry themselves; they must be backed by some material to be weather-proof; they must be deviously anchored. In our industrial cities they deteriorate in the gas-laden atmosphere. The use of stone is an aesthetic tradition; the monumental material of the past, its use was appropriate in wall-bearing construction for monumental and sumptuous edifices. Today it persists as an example of the theory of conspicuous waste.

That stone has so largely gone out of use in recent years except for trimmings is due, however, not to a realization of its essential unfitness for its purpose, but to prohibitive cost occasioned by a combination of circumstances chiefly arising from the war and trade-union regulations. Under the pressure of these conditions and not from any aesthetic choice, it was discovered that brick could be beautifully laid in patterns as a colorful and decorative surface instead of as an imitation masonry wall. And the logical successor to brick—especially if the brick manufacturers succeed in combining themselves out of business—is terra-cotta.

Another change, the most recent and obvious, in the architecture of New York, has been brought about by the zoning and set-back laws. Economic dictates, of course, were behind the enactment of these laws. When the greed of property owners and speculators in exploiting the space above their lots threatened not only to become a menace to public health but to reduce rentals by cutting off light and air, it was found desirable to limit an owner's rights to do what he pleased with his own. The Rights of Private Property were invaded ostensibly for the protection of the public—and one of the most beautiful characteristic effects of New York architecture has been the result.

With the practical, modern office-building essentially a steel frame requiring, logically, an entirely new exterior expression, a fair question is: Why are our streets lined with specters of the outworn past? In a measure it is because aesthetic development must always lag behind structural changes which demand such rapid visual readjustments as are involved in the change from wall-bearing to skeleton steel construction.

A generation is a short time for the eye to get accustomed to new dynamic relationships. One of the most important of these relationships is the immensely greater strength of steel as compared to the materials formerly in use. The experience of ages had taught that so much masonry was needed to support so much weight; that a stone could reasonably span such a distance, a wood beam such another distance; that too slender

a support would buckle and break, too long a lintel sag and crack. Steel and reinforced concrete have changed all those long-accustomed balances. The eye must come to new realizations of what is safe, and therefore what is comfortable, and therefore what can give pleasure.

Other changes are the elimination of shadow brought about by shallow reveals in the thin curtain-walls, and the consequent emphasis of surface as opposed to mass; and the tremendously increased importance of the silhouette under the application of the set-back laws.

These adjustments are gradually taking place. The trend of the new design may be briefly and cursorily traced by considering the Park Avenue Hotel, the World Building, the Waldorf-Astoria Hotel, any loft building in the Fifth Avenue twenties, the Plaza Hotel, the Woolworth Building, Pierre's and Sherry's, the Fisk Building, and the new Shelton Hotel on Lexington Avenue.

It should be noted that while economic pressure tends on the one hand to make buildings structurally modern on the other it tends to hold back aesthetic progress through fear that "novelty" in appearance may hinder rentability. It is for this reason, as well as for aesthetic ones, that so many of our commercial structures are clothed in ill-fitting garments.

Although there is slow but evident progress visible in our commercial work it is nowhere visible in our public edifices, where the question of expense is not so fundamental, the desire for conspicuous waste often a ruling motive, and the dead hand of academic tradition falls most heavily. With the exception of the design for the Nebraska State Capitol, none of our recent public buildings show the slightest attempt to develop an architectural expression in accord with either the structural system or their surrounding civilization. Their steel frames are swathed in mummy-cloths. The absurdity of steel-framed masonry domes! The sterility of rows of useless columns! Endless modillions and garlands taking the place of imagination and suitable invention! How can they be other than ostentatious, dreary, and monotonous?

Almost as little evidence of change is to be found in our domestic architecture. Characteristically enough, the more expensive the work, the more time expended upon it, the less the progress. The reason here is not only the comparative lack of economic pressure; there is a simple psychologic factor involved. A man's house is what he lives with, and to most men the most usual is the most livable. Anything "different" in the way of a home would make him feel as ill at ease as a purple shirt with lace ruffles. Then,

Concrete and steel bridge, 40 feet, 6 inches, single leaf bascule span, 30-foot roadway. Removal of present concrete bridge. Owners taking bids due November 27th at noon.

**Road Work, New Jersey.** Owners, State Highway Commission, A. Lee Grover, secretary, State House, Trenton, N. J. Route 15, Section 5, Millville to Menantico Creek in the County of Cumberland. 7,756 cubic yards excavation, 5,126 cubic yards borrow, 38,600 square yards reinforced concrete pavement, 19,787 square yards gravel shoulders. Owners taking bids due November 27th at noon.

**Highway Bridge,** over Raritan River, between Perth Amboy and South Amboy, N. J., \$3,000,000. Engineers, W. G. Sloan and Clarence W. Hudson, Trenton, N. J. Owners, State of New Jersey, State Highway Commission, A. Lee Grover, secretary, State House, Trenton, N. J. Owners taking new bids due November 27th.

## New Jersey Contracts Awarded

**Central Office Building,** Merchantville, N. J. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Delaware & Atlantic Telegraph & Telephone Co., care of Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Brick, concrete, cut stone and steel, 3 stories, 69x54 feet, slag roof, cement floors, steam heat, electric light, metal lath, tile and marble work, hollow metal sash, bond. Contract awarded Monaghan & Losse, 3016 Chestnut street, Philadelphia.

**Bell Telephone Building,** Princeton, N. J. Architect, J. T. Windrim, Commonwealth Building, Philadelphia. Owners, Delaware & Atlantic Telegraph & Telephone Co., care of Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Brick, cut stone, steel, 2 stories and basement, 96x33 feet, steam heat, electric light, metal lath, tile and marble work, glass, slate skylights, bond, slate roof, composition and cement floors. Contract awarded Mathews Const. Co., Princeton, N. J.

**Church,** South Camden, N. J. Architect, George C. Baum, 1511 Arch street, Philadelphia. Owners, Christ Lutheran Church, Rev. S. K. Kister, 2855 North Constitution street, Camden, N. J. Brick, steel, cast stone, 2 stories and basement, 60x48 feet, slate and tin roof, electric light, metal lath, pine and cement floors, artificial stone, iron work. Contract awarded E. J. Kreitzburg, 1345 Arch street, Philadelphia.

**Residence,** Washington, N. J. Architect, E. H. Wenzelberger, 3 Center Square, Easton, Pa. Owner, J. Cornish, Washington, N. J. Brick, 2½ stories, 44x32 feet, slate roof, hardwood floors, electric light, vapor heat, tile work. Contract awarded to F. Apgar, Washington, N. J.

**Residence,** Washington, N. J. Architect, E. H. Wenzelberger, 3 Center Square, Easton, Pa. Owner, H. P. Humphrey, Washington, N. J. Brick, 2½ stories, 44x32 feet, slate roof, hardwood floors, electric light, vapor heat, tile work. Contract awarded to F. Apgar, Washington, N. J.

**Show Window (alts. and add.),** 1127 Broadway, Camden, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owner, H. J. Dudley, 1127 Broadway, Camden, N. J. General interior alterations. Contract awarded to L. F. West, 828 Broadway, Camden, N. J.

**Residences (2),** 219-221 Newell avenue, Trenton, N. J., \$8,000. Architect, private plans. Owner, Josephine Swick, 113 Newell avenue, Trenton, N. J. Frame, 2½ stories, 14x40 feet, slate roof, pine floors, electric lighting. Contract awarded to James A. R. Bole, 83 Beechwood street, Trenton, N. J.

## Miscellaneous Construction News

**Laboratory Equipment,** Junior and Senior High School, Roanoke, Va. Architect, Joseph Margolis, 1505 Race street, Philadelphia. Owners, Board of Education, Roanoke, Va. Plans in progress.

**School,** Newark, Delaware. Architect, private plans. Owners, Delaware School Auxiliary Association, Dupont Building, Wilmington, Del., and Board of Education of Newark, Del. Dr. W. H. Steel, president, Newark, Del. Brick, concrete, semi-fireproof, 2 and 3 stories, 170x118 feet (plumbing, heating, electric work separate bids). Owners taking bids due November 28th at 2 P. M.

**Hall of Chemistry,** Morgantown, W. Va. Architects, Paul A. Davis, 3rd, & Dunlap, 1713 Sansom street, Philadelphia. Owners, West Virginia University, care of State Board of Control, J. Slakin, Charleston, W. Va. Brick, limestone, granite and steel, 4 stories, 305x79 feet, slate roof, tile, marble, terrazzo, composition and cement asphalt floors, iron work and stairs, metal lath (heating, plumbing, lighting and ventilating separate bids), hollow tile. Owners taking bids due December 28th at 3 P. M.

## Miscellaneous Contracts Awarded

**Residence,** Tacoma Park, Md., \$12,000. Architect, Thomas B. Lippincott, 11 South Sixteenth street, Philadelphia. Owner, Walter D. Labert, Anacostia, D. C. Stucco and bishop board, 2½ stories, irregular, 31x30 feet, with wings, asphalt shingle roof, hardwood floors, electric light, vapor heating. Contract awarded Leppo & Stanley, Harlan Place, Tacoma Park, D. C.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., October 29, 1923. Sealed Proposals will be opened in this office at 3 P. M., November 27, 1923, for the construction of a one-story brick and tile non-fireproof Post Office building, approximately 62 by 64 feet in size, at Gallipolis, Ohio. Drawings and specifications may be obtained from the Custodian of the site at Gallipolis, Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., Nov. 12, 1923.—Sealed Proposals will be opened in this office at 3 P. M., Dec. 10, 1923, for remodeling at the United States Post Office at Allentown, Pa. Drawings and specifications may be obtained from the Custodian at Allentown, Pa., or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

**GOVERNOR'S MANSION  
AT  
KANAWHA, DUFFY AND  
VIRGINIA STREETS  
CHARLESTON, WEST VIRGINIA  
NOTICE TO CONTRACTORS**

Sealed bids will be received by the State Board of Control at its office in Charleston, W. Va., until 2.00 P. M., Friday, December 28, 1923, for the furnishing of all labor and materials of every kind necessary in the completion of the building described below, according to the plans and specifications of Walter F. Martens, Architect, Charleston, W. Va.

The building is to be 73 ft. 6 in. x 81 ft. 2 in., with a service wing 58 ft. x 17 ft., and with additional areas for porches; semi-fire-proof construction; two stories high, with half basement and attic; walls brick, hollow tile; exterior walls faced with Colonial Red Brick; Vermont Marble and Indiana Limestone trim; slate roofing; built-up roofing on decks; structural steel and steel lumber; tile floors in halls, baths, toilets and porches, oak floors elsewhere; wood stairs on steel frames; trim Birch, Oak and Poplar; metal lath; Gypsum and cement plaster; wood sash, frames and doors; electric wiring, conduit system; inter-communicating telephone system; plumbing; vapor steam heating system; incinerator; vacuum cleaner.

Plans, specifications and blank form for bids will be mailed by the State Board of Control, when request is accompanied with check for \$25.00, which amount will be **REFUNDED ONLY ON RECEIPT OF BONA-FIDE BID** on or before the time named above, and the return of the plans.

Bids to be accompanied with certified check payable to the State Board of Control for an amount equal to 1% of the bid, as guarantee of good faith.

**STATE BOARD OF CONTROL  
By JAMES S. LAKIN, President  
Charleston, Kanawha County, W. Va.**

**HALL OF CHEMISTRY  
WEST VIRGINIA UNIVERSITY  
MORGANTOWN, WEST VIRGINIA  
NOTICE TO CONTRACTORS**

Sealed proposals will be received by the State Board of Control, at its office in Charleston, W. Va., until 3.00 P. M. Friday, December 28th, 1923, for doing all work and furnishing all material necessary to complete the building described below, according to the plans and specifications, and the addenda thereto, prepared therefor by Paul A. Davis, 3rd, & Dunlap, Architects, Philadelphia, Pa.

The building is to be 305 ft. 7 in. x 79 ft., four stories, with basement and attic, with extension of one story and basement. Fire-proof construction except main roof, which is steel, wood and slate. Exterior of face brick with Indiana Limestone trimmings. Interior brick finished walls. Concrete ceilings. Interior wood finish of Oak. Interior partitions brick and tile. Stairs iron. Entrance vestibule marble and plaster. Floors of terrazzo, marble, tile, composition, cement and asphalt.

Plans and specifications, and blank form for bids will be mailed by the State Board of Control when request for plans is accompanied with check for \$25.00, which amount will be **REFUNDED ONLY UPON RECEIPT OF BONA-FIDE BID AND CERTIFIED CHECK**, on or before time named above, and

return of plans and specifications.

**STATE BOARD OF CONTROL  
By JAMES S. LAKIN, President  
Charleston, Kanawha County, W. Va.**

(Continued from Page 724)

too, the rich man sees a villa or a palace abroad, and because it costs more to build, and looks it, he must have it reproduced here—the Palazzo Massimi on Fifth Avenue, a Tudor mansion on Long Island, a Brittany farm-house in Westchester. Of course structural methods in the domestic field have not changed so radically as they have in larger building; it is not, perhaps, so heinous an offense to build a modern brick house in imitation of an old one. However that may be, our most living—if not livable!—domestic work is to be found in the model-housing industrial villages, where rigorous elimination of waste and the need for quantity production have prevented the aping of a long-dead craftsmanship, and simple, good effects have had to be obtained by the use of machine-materials, "untouched by human hand." In the same way, the noticeable increase in restraint and "good taste" in the speculatively built apartments in New York, which has received favorable comment in many quarters, has not been at all due to an increase in good taste, but to the prohibitive cost of gimcrackery.

Economic forces will thus in time bring about a new architecture aesthetically, as they have already done structurally, replacing mass and shadow by surface and silhouette. Proportion, the basic factor of good design, will always remain the chief factor. However good proportion and its concomitant, good "scale," are not absolute, as the academicians like to think, but depend on inter-related relationships—the size and shape of the building, the relation of its many parts to the human figure and human needs, the materials used, and the system of construction. Good classic, gothic, and steel proportions are very different things, although many architects seem to think they are interchangeable. A rhinoceros skin does not fit a giraffe, nor even a cow, though all are mammals.

When modern structural methods are followed out to their logical conclusion, the results are progressive and interesting architecture. When eclectic aestheticism is followed, when "art" is the inspiration, the result is only pretense and puerile copying. Only from a building which answers inevitably to our modern needs do we get a modern emotion, a feeling of hardness, steel, vibration, discordant beauty, an emotion satisfying to our modern spirit. It is not beauty as the Greeks understood beauty, nor emotion as the builders of Chartres understood emotion, but it is life as it is understood today.

We need fewer artists and more architects; less art and more architecture. When we finally get that, we shall not need to look either humbly or reverently toward Athens, Rome, or Paris.—*The Nation*.

**SELECTION OF TYPES OF ASPHALT PAVEMENTS WITH  
REFERENCE TO LOCAL  
MATERIALS\***

*By ROY M. GREEN, Manager, Western Laboratories, Lincoln, Neb.*

*Importance of Street Pavement Problem*

During the year 1921 over \$120,000,000 was expended for the improvement of the streets in the 252 largest cities in the United States. During the same year the sum of \$34,742,791 was expended for sanitation and the promotion of cleanliness, and \$55,396,376 for schools in the same cities.† Over thirty-nine per cent. of all the outlay of funds in these cities was expended for highway improvement. More than twice as much was spent for street improvement as for schools and nearly four times as much for streets as for sanitation. These statistics indicate the relative magnitude of the street paving problem as compared with other municipal undertakings on the basis of financial importance.

Regardless of the manifest importance of this problem in every city in the United States we still find the laymen of the various cities, through their city councils, or commissions, feel justified in taking from the hands of their engineers the important problem of the selection of the type of pavement to be used in any location. The success of the street system, as a transportation medium, is entirely dependent upon this selection, yet many members of city council feel themselves qualified to select the type of pavement to be used. These same men would hesitate to even make a recommendation regarding the design of a sewer or water-supply system where much less money is involved in the enterprise.

*Authority of Engineer*

Although it is manifestly a fact that this authority should be vested in the Engineer, we are still confronted with the condition, in many states, where the law delegates this authority to the city council, or even worse, to the abutting property owners within the district to be paved. Without any question, this reacts against the best interests of the public and results in improper selections in

\*Paper read before the recent Asphalt Convention at Denver, Col.

†From "Financial Statistics of Cities for 1921," U. S. Department of Commerce, Bureau of Census.

many instances, and is one of the greatest contributing causes of the short average life of pavements.

Since the Engineer does not have this authority it would seem, at first thought, that a discussion of the selection of types of asphalt pavements with reference to local materials is a waste of time at a meeting of engineers, but this is not true.

Even though the Engineer is confronted with this condition, he still has great authority in making the selection of type through the fact that he still has practically unlimited authority in the drafting of the specifications for the work contemplated. Let us call this, selection of type by specifications. Unfortunately the Engineer too often overlooks the fact that he has this authority and hastily draws up his specifications by simply adopting the standard specifications of one of the national agencies that have adopted such standards, never realizing that his client may suffer great financial loss through such procedure.

There is never a locality where one of the asphalt pavement types does not have a superior economic advantage over all others on account of the availability of some source, or sources of supply of local materials. In some cases these local materials may be of such a nature that they will not meet the requirements of the specifications of the American Society of Municipal Improvements or of the Asphalt Association. I do not wish to be understood, however, as critising these specifications, because I most heartily approve of them, and especially those of the Asphalt Association, which I consider as the best group of standard specifications that have ever been prepared, but I do wish to bring out the fact that the blind use of standard specifications is poor engineering and results, in many cases, in higher costs to the owner without a corresponding improvement in the quality of the finished product. On the other hand, it is likewise very poor engineering to specify for the use of local materials without first making a very thorough investigation of these materials. Furthermore, such an investigation should not simply include the usual laboratory tests of these materials but should embrace a thorough examination of the deposits, method of production, quantity and uniformity as well as quality of the material itself. These investigations should be carried on only by persons who are thoroughly qualified, through years of experience in the construction of asphalt pavements, for if they are not, the entire expenditure of the owner's money is then being placed upon an experimental basis, which is a condition never justifiable under any circumstances.

If this procedure is followed it will be possible for the Engineer to exercise

great influence in the selection of type with reference to local materials if he makes a thorough investigation of the availability of materials of all kinds and then makes sure to include in his specifications a description of the type that can be constructed by using the greatest quantity of low priced material of a quality that is entirely satisfactory for the purpose intended. As soon as bids are received under these specifications the price bid on this type should be low enough to make the selection almost inevitable.

#### *Abuse of Selection by Specification*

Allow me to take two illustrations from cases that have come to my attention in our practice. In one city an engineer asked for bids upon sheet asphalt and asphaltic concrete, coarse aggregate type, (in this case called Bitulithic). The specifications for the large aggregate for the asphaltic concrete showed the use of a very inferior grade of broken stone and as a result an aggregate was used having a toughness of only four when tested by the Page Impact Machine. To have obtained satisfactory large aggregate of broken stone for this work would have required its being shipped for a distance of over 500 miles and from another State at a very high freight rate.

On the other hand the large aggregate for use in the binder course of the sheet asphalt was described in such a way that it required an aggregate of a toughness of 10 and a French co-efficient of wear of not less than eight and made it necessary to ship this material a distance of over 500 miles while there were good commercial deposits of gravel containing materials that would have been entirely satisfactory for that purpose within a distance of less than 50 miles. All other aggregates entering into the construction of sheet asphalt pavement were even nearer than this with the exception of the stone dust for filler. The Engineer either abused the privilege of selection by specifications and deceived the owner's confidence and wasted their money or he was ignorant. In this case, I believe that it was the former because he specified also that the binder for the sheet asphalt should contain 7 per cent. of limestone dust. The city is no longer a client of the engineer.

#### *Proper Use of Selection by Specification*

On the other hand, let us consider another illustration, where specifications were drawn with the intention of utilizing available materials to the greatest advantage. The City, through their engineer, adopted a specification, which incidentally is not in accordance with any of the standard specifications for large aggregate for binder construction, but is good practice and has been demonstrated as being satisfactory for the work con-

templated. Through the use of these specifications, instead of the adoption of one of the standard specifications, the most economical selection was apparent to any unprejudiced party and resulted in the saving of approximately \$50,000 on a two year paving program and the quality of the work did not suffer in the least detail. All the aggregates for this work were obtained within 5 miles of the improvement with the exception of the limestone filler.

In closing, however, I wish to again sound the word of warning against the adoption of any local materials or special specifications unless their adoption is thoroughly investigated by one who is unquestionably qualified to pass judgment upon their utilization for the work contemplated as it would be a serious error in policy to place the expenditure of public money, in such great quantities, upon an experimental basis and it would react against the best interests of all concerned in the construction of roads and pavements.

On the other hand I wish to draw your attention to the economic value of making thorough investigations of all sources of supply of materials for utilization in the construction of asphalt pavements.

### CHECKING BANDITRY BY CHECK PAYMENTS

#### *Armed Guards for Cash to Meet Payroll Serve Often Only as Advertisement of Possible Loot*

BY HENRY F. WOODS

Within a year, it is estimated, thirty-two lives have been lost and \$1,500,000 in cash stolen in attacks on payroll escorts. This is a rather steep loss in lives and treasure when it is considered that it might have been prevented.

From time to time suggestions have been put forth tentatively for a way of preventing attacks by payroll bandits and have been adopted by some of the great business concerns. Recently, the great increase in payroll robberies, with the attending violence and the frequent loss of their lives, roused Police Commissioner Enright of New York City to renew the suggestion that payments of salaries and wages by checks instead of cash would be an effective means of prevention.

Commissioner Enright advocated the system vigorously and with logical arguments for its general adoption, citing the fact that armed escorts for the payroll cash transported through the streets in daylight from banks to business offices were no deterrent of this form of banditry, but that, on the contrary, the very sight of armed guards was plain notice to crooks that cash was being convoyed.

#### *Murder Employed*

Criminals who specialize in these

attacks are of the boldest and most desperate class, who do not stop at murder when a rich haul is in sight, and the crowded conditions of the streets is really an aid to them in their surprise attack and in their escape with the booty. For these reasons, Mr. Enright argues the one effective way to circumvent them is to meet the payroll with checks.

The system he advocated has since been endorsed by more than a score of the police heads in the largest cities in the United States and Canada. A questionnaire sent out recently to Police chiefs of Philadelphia, Boston, Baltimore, Washington D. C., Detroit, St. Louis, Kansas City, San Francisco, Milwaukee, Indianapolis, Omaha, Salt Lake City, Portland, Oregon, Montreal, Toronto, and other large cities developed that, without exception, all those who answered believed that to pay by check instead of by cash is an effective and a workable means of preventing payroll holdups.

In several instances, support of the system was given with reservations, notably that the checks drawn to meet the payroll should be adequately protected against the operations of forgers, raisers, and other check swindlers. This factor was considered by companies that have adopted the plan, and the use of special forgerproof paper and check-writers that shred the written amount of the check through the paper fiber in ineradicable ink of two colors is considered to have shorn of its force the one objection indicated.

If the plan had been found wanting in effectiveness and discarded after a trial it would not be difficult to understand why its advantages have not been more readily appreciated and the plan itself more generally adopted. But it has been adopted and in operation for several years by some of the greatest business concerns in this and other countries. In conservative England it has long been in use at "Port Sunlight," the famous soap works of the Lever Brothers, where its use has been made an effective promoter of thrift among the employees.

The viewpoint of police chiefs is of course that the check system is a preventive of crime, and necessarily this is the greatest argument for it. But in practice it has been found to be effective as well as promoting economy, efficiency, and thrift among the employees.

Some ideas may be gained of the great opportunities afforded payroll bandits when we consider that, according to the latest Bureau of Census statistics there are an average of 6,896,190 wage earners employed in the United States and that the total of wages paid annually in this country is eleven billion dollars. The

total of both employees and wages is greater even than this, for the statistics compiled by the Bureau relate only to those industrial establishments having an annual production value in excess of \$5,000.

#### *Is a Cheaper Method as Well*

Among advantages of the pay-by-check system other than its main factor of safety, the first in the list is that of economy, for there is dispensed with the need of providing insurance for a cash payroll, and also the need of guards to protect it on transfer through the streets. A second saving lies in the increase in the bank balance of those firms paying by checks for as payroll checks frequently pass through many hands before they are finally presented for payment, the delay of course permits of the use of the money for a longer period than when payments are made by cash.

It is the experience of most firms paying by check that the system requires fewer clerical workers than the cash payment method and is less susceptible to errors. Mechanical devices for speeding up the process and minimizing the chances of errors have been utilized by many of the firms paying by check and have effected an additional saving in time and expense. This is especially the case with those concerns having large payrolls and where the work of paying off extends over a period of several days in the week.

#### *Cashing Must Be Easier*

Two arguments mentioned against adoption of the pay check have been the possible reluctance of banks to accept it and the objection of employees. If any real basis for the first objection ever existed, it seems to have disappeared, for many of the banks have not only accepted the plan but have made special efforts to co-operate with employers in making it a success. The most recent and notable instance of this co-operation is furnished by the Corn Exchange National Bank of New York, one of the greatest banking institutions of the country, which has established a special payroll service for paying employees by check.

Under this service employers give their employees special checks designated as pay checks which may be cashed at any one of the fifty-three branches of the Corn Exchange Bank in New York. Each branch is provided with signature copies of the employees' names, in order that identification may be made simple. A special pay-check window is maintained, and these pay-check windows are open from 9 A. M. until 5.30 P. M., including Saturdays. This arrangement is an extra banking service for the special convenience of employees.

#### *Removes Objections*

Such co-operation by the banks re-

moves to a large extent the ground for the objection of employees to it as inconvenient. Those employers who have adopted the pay check system have endeavored to meet the same objection by methods varying according to local conditions. In some instances the checks are made payable "to bearer" or "to order," so that they may be cashed without inconvenience. In other cases the checks are made payable to the employee by name, and arrangements are made with the local banks to cash them without other identification than the signature of the payee made in the presence of the teller, or by a showing of the workman's badge with a number to correspond to the employee's number on the check.

Where opposition was expressed at first by employees, it has been the experience of firms that it has gradually subsided and that the system in time comes to be preferred, even by the workers themselves, to the old method of paying by cash. As their familiarity with the simple process of cashing their checks at a bank grows, they lose their distrust of or timidity with banks and realize the advantages of having business relations with them.

#### *Starts Habit of Thrift*

This is to the advantage of the banks as well as of the employees and is, in fact, the beginning of the thrift habit with many who would not otherwise have been led to start a bank or a savings account. This habit is encouraged by some of the companies, which obtain permission of their employees to deposit their salaries or wages in any one of the local banks designated by them. In such cases the company forwards to the bank lists of the amounts to be credited to each employee, at the same time enclosing a check to cover the total. The employee, at his convenience, takes his bank book to the bank and has the amount to his credit entered in it. Thus he is saved the inconvenience of having to deposit or cash his pay check and, at the same time, is established with a bank account against which he can draw to pay bills or to provide himself with cash for his current needs.

Summing up the case for payments of wages by checks, it may be said to possess these undoubted advantages: the prevention of payroll holdups; security against loss, especially when the approved precautions are taken to safeguard checks by the use of effective check-writers and forger-proof paper; economy of office operation in saving of time, of errors, and of interest on balances; convenience to the employee in providing a safe place for his funds against losses by fire and robbery; and the promotion of habits of thrift.

## As The Editor Sees It

### ANNOUNCEMENT OF PERSONNEL OF AMERICAN CONSTRUCTION COUNCIL'S COMMITTEE ON APPRENTICESHIP, VOCATIONAL GUIDANCE AND CRAFTSMANSHIP

Recently the American Construction Council announced the creation of a committee on Apprenticeship, Vocational Guidance, and Craftsmanship with Mr. F. W. Walker, secretary of the Associated Tile Manufacturers, Beaver Falls, Pa., as its chairman, stating that the complete personnel of this committee would be announced shortly. This committee co-operates with employees' and employers' organizations, building congresses, and all other elements in the construction industry, and with educational bodies, local and national, in providing for apprenticeship which will be attractive to young men and will afford the fullest means for the employment and training of efficient workers as apprentices, and will produce the skilled workmen needed in the construction industry.

The following individuals have been appointed to serve on the committee on Apprenticeship, Vocational Guidance and Craftsmanship of the American Construction Council. In addition, various national associations of employers, manufacturers and professional bodies, as well as the various trades and crafts representing labor in the industry, have

been invited to nominate representatives on this important committee of the Council. The individuals and organizations thus invited will help in the further development of apprenticeship in the construction industry through the appropriate agencies of the Council co-operating with all organizations within the industry. Any other association that feels it is vitally interested in this subject is invited to write the Council suggesting names to be considered for membership on the committee.

A meeting of the committee as a whole will be called very shortly, probably in Buffalo, the week of December 6th.

#### *Individuals Invited to Serve on American Construction Council's Committee on Apprenticeship, Vocational Guidance and Craftsmanship*

S. Department of Labor, Federal Board for Vocational Education.

#### DANGER IN SEPARATE CONTRACTS

*Policy Proposed by Mechanical Trades Would Undermine Construction Work, Study Made by Associated General Contractors Shows*

The policy of awarding separate contracts for mechanical installations on Government construction, which is being urged upon the Interdepartmental Board of Contracts and Adjustments by representatives of the mechanical trades, was submitted by the Board last May to the Associated General Contractors of America with a request for analysis and opinion. Pursuant to this request, the proposed policy was referred to the Ex-

ecutive and Advisory Boards, the Presidents' Council and the local chapter of the Association, who have made an extended investigation of the subject and have rendered their reports. From the information presented in these reports, the following analysis of the policy, submitted to the Interdepartmental Board of Contracts and Adjustments by the Associated General Contractors of America, September 10, 1923, with respect to both private and public work, has been drawn.

The direct awarding of contracts for heating, ventilating, plumbing and electrical work to sub-contractors, if adopted, will mean that certain integral portions of the structure upon which other integral portions depend in both structural feature and sequence of installation are to be removed from the co-ordinating control of a centralized management, and that these portions are to be placed under the control of an agency that assumes no responsibility for cost or time of completion, namely, an architect, an engineer or a contracting officer. This feature of the separate contract, though apparently not recognized by those professional men who have favored the proposed policy on various occasions, is the most vital issue involved, and is unquestionably the most important consideration affecting the interest of a prospective construction owner, whether an individual, a political subdivision or the Federal Government.

#### *Anticipation Difficult*

The importance of the question at issue, with respect to successful construction performance and responsible service can hardly be overstated, but it is difficult for those unacquainted with the business side of construction to anticipate the results that a change of policy affecting usual contractual obligations may entail. To do so it is essential that the present system of executing construction projects through the agency of a general contractor be clearly viewed and that cognizance be taken of the service which the general construction company performs. For this reason a section of this analysis is given to a statement of the service performed by such a company, after which is stated the effects that may logically be expected to result from altering the character of this service by the use of separate contracts for mechanical equipment.

#### *Management Function of the General Contractor*

The principal function of a general contractor, when operating under the single contract plan, which has developed to meet the needs experienced by both public and private owners, consists of furnishing centralized construction

(Continued on Page 750)

**HALL OF CHEMISTRY  
WEST VIRGINIA UNIVERSITY  
MORGANTOWN, WEST VIRGINIA  
NOTICE TO CONTRACTORS**

Sealed proposals will be received by the State Board of Control, at its office in Charleston, W. Va., until 3.00 P. M. Friday, December 28th, 1923, for doing all work and furnishing all material necessary to complete the building described below, according to the plans and specifications, and the addenda thereto, prepared therefor by Paul A. Davis, 3rd, & Dunlap, Architects, Philadelphia, Pa.

The building is to be 305 ft. 7 in. x 79 ft, four stories, with basement and attic, with extension of one story and basement. Fire-proof construction except main roof, which is steel, wood and slate. Exterior of face brick with Indiana Limestone trimmings. Interior brick finished walls. Concrete ceilings. Interior wood finish of Oak. Interior partitions brick and tile. Stairs iron. Entrance vestibule marble and plaster. Floors of terrazzo, marble, tile, composition, cement and asphalt.

Plans and specifications, and blank form for bids will be mailed by the State Board of Control when request for plans is accompanied with check for \$25.00, which amount will be REFUNDED ONLY UPON RECEIPT OF BONA-FIDE BID AND CERTIFIED CHECK, on or before time named above, and return of plans and specifications.

**STATE BOARD OF CONTROL**

By JAMES S. LAKIN, President  
Charleston, Kanawha County, W. Va.

The Penn Building Company, contractors and builders, formerly of 1509 Venango St., Philadelphia, have opened new offices at 6517 North Lambert St., Philadelphia.

Frank Schmitt, formerly with Thomas J. Regan, Philadelphia, has opened offices at 1132 Vine St., Philadelphia, under the name of Schmitt & Slater Company, brickwork and masonry.

(Continued from Page 740)

management and single responsibility for successful completion of a structure. the element of responsibility is manifold and under most existing contracts includes protection to the owner from loss due to causes such as the following:

- Increased cost of construction.
- Delay in completion.
- Injury to workmen and the public.
- Patent infringement.
- Injury to adjacent property.
- Damage from the elements and acts of God.
- Imperfect material and workmanship.
- Liens and the abuse of lien laws.
- Default on subordinate contracts.
- Unknown underground conditions.
- Demands for extortionate wages.
- Fire and theft.
- Labor, material and transportation shortage.

When separate contracts are used, much of this responsibility is placed directly upon the owner. Contrary to popular conceptions, the most important function of the general contractor is not

to erect steel, brick or concrete, but to exercise skill in purchasing to co-ordinate all crafts as to structural feature and to synchronize their operations as to time of installation. Due to the great number of different trades and products entering into a project, all of which must be co-ordinated with the main skeleton and principal elements, this portion of the work is usually performed by the contractors' own forces—not that actual performances of such work is inseparable from the management function, but because it is the most vital portion of the structure, into which other elements fit, and should therefore be subject as far as possible to control of the central management.

General contracting in construction today is a combination of management service, financing, and the assumption of certain risks which are not common to manufacturing and other industries. In fact the basic industries serving construction refuse to accept many of these risk; and since the public or private owner is unwilling to assume them, they are consolidated and carried by the general contractor as a part of his service. Incidentally it is that part of his service which has made contracting, according to the report of the income tax unit, the most hazardous of all production industries.

*Gives a Guarantee*

More briefly stated, the construction company guarantees to deliver a specified project at a given cost and particularly, in Government contracts at a given time. Under the policy of separate contracts it is proposed to take certain portions of the work away from the construction company's control, but apparently to hold that company responsible for the time of completion and satisfactory co-ordination of the different crafts.

A few public officials and practicing professional men have tried the plan of making separate contracts for all portions of a building, thus eliminating the services of a general contractor, but these experiments have demonstrated conclusively that though the contractor may be eliminated as a personality, his business function must be assumed by either the owner or his representatives, and, assumed moreover, without the protection against those contingencies assumed by a general construction company. In other words, general contracting is not the mere broking of contracts, but is a highly specialized business, depending for its success upon the personal skill and direction of capable executives.

In a comparatively few exceptional cases, engineers or architects have successfully performed this management function; but they have done so not by reason of their technical skill, but in spite

of it. They were good construction executives, with an understanding of business and economics—combination not commonly found in the professions. The award of separate contracts constitutes the assumption of construction management by the professional representatives of the owner and is subject to the same objections that are encountered when the construction executive attempts the function of design. Each of these functions requires its particular type of mind, trained to its respective functions, and when either transgresses the other field the owner usually pays the unnecessary cost.

Sub-contractors, undoubtedly understand this question of management, and the issue of separate contracts involves no contention that the management function can be eliminated but merely raises the contention that this management shall be split apart and a portion of it placed upon the owner or his representative—a procedure which under usual conditions the vast majority of conscientious professional men know to be unsound.

Since delay of completion and extra cost are serious factors in most construction projects, and since owners naturally do not care to assume direction of matters affecting these things, they have nearly always found it to their best interests to deal with a single responsible company that will guarantee to deliver the structure at a given time, for a given price without obliging them to assume the task of management. Such a service can obviously be rendered only through the award of a general contract which vests in some experienced company the authority necessary to carry out the commission. That this policy of management is sound in practice as well as theory is demonstrated by its continuance in an economic scheme where the general contractor as an individual has successfully dealt for his client with a multitude of strongly organized industries.

The inconsistency of the separate contract plan though obvious with respect to the time element, is not so apparent with respect to cost. Yet its effect on cost is the same. Any delay of a project under ordinary circumstances adds to the cost and with four or five independent contractors carrying on their respective operations delays in those contracts introduce delays and expense beyond the control of the principal contractor. In view of the principle of extension of time for delays beyond the control of the general contractor, recently approved by the Interdepartmental Board, any award of separate contracts upon which the major contract depends appears incompatible with the spirit of the new standard contract.

In practical effect, separate contracts mean the shifting of control without the

shifting of responsibility, a process that corporate industries constantly guard against. In fact, the necessity of matching responsibility with control is so generally accepted in modern industry that the principle has become axiomatic. Under the separate award a portion of this control is placed in the hands of a professional man or, on government work, in the hands of a contracting officer, neither of whom assumes financial responsibility to the owner. Since it is upon this responsibility that competitive bidding is established, public officials and the professions should proceed with caution, unless they desire to pave the way for a breakdown of the competitive system.

Whatever policy is most advisable for handling mechanical installations is a matter which can undoubtedly be decided by the Interdepartmental Board on a basis of public interest; and the mere pecuniary interest of any trade group can rightfully enter the question only where it is compatible with the other factors of economy, quality of work, efficient service, and public safety. How the proposed policy affects these factors is indicated in the following sections:

#### *Economy*

Reports from many representative construction companies show that the usual percentage commonly, but improperly, designated as profit that is added to mechanical contracts by the general contractor is about 5 per cent. This amount, though it may, in some cases, contain an element of profit, is in reality a service charge to compensate for such items as superintendent, night watchman, hoisting, storage space, protection from weather, temporary heating and other general overhead expense entailed by the sub-contractor which cannot be accurately proportioned to each unit of construction. When it is recalled that the architect in private work usually charges 3 or 4 per cent. for handling sub-contracts direct and yet provides none of the above items except the superintendent, it is obvious that the contractor's 5 per cent. can contain no great amount of profit.

As the total proportion of the mechanical trade is rarely over 20 per cent. of the project, it therefore occurs that the architect's fee for management amounts to some three-fourths of 1 per cent. and the contractor's fee to about 1 per cent. of the total contract sum. On government work this fee of the architect would not actually be paid in money, but if the supervising architect or any other official performs this management function his staff must be greater than that required for design and the added expense occurs. This means therefore that by using separate contracts a private owner or the government appears to save one-fourth of 1 per cent. on the structure by assuming the responsibility that is regu-

larly assumed by the general contractor.

In reality the saving is less than this amount, as the architect and the contracting officer have no facilities for rendering the necessary services to sub-contractors and must in their contracts place performance of this service upon the general contractor. The expenses for such services must obviously be included in the general contract price, if they are not included in their logical place as a percentage on the sub-contract.

#### *At Least Four Factors*

Experience has shown that this apparent saving on the contractors' charge, due to at least four factors of indirect expense which overbalance the saving is seldom realized. These are as follows:

*First, Suits and Damages.* When the responsibility for successful performance is divided among a number of independent contractors friction almost invariably arises over their respective obligations and the way is open to claims for extras and damage. That the danger discord and damages under the separate contracts plan is anticipated and may be a very grave reality, is evidenced by the standard Documents of the American Institute of Architects. Provision is therein made that if any contractor damages another he shall settle with that contractor if the contractor will agree to settle, and if any contractor sues the owner by reason of such damage, the contractor alleged to be responsible for the damage shall defend the suit at the owner's expense, reimbursing the owner if the suit is lost.

The mere fact that the system places an owner liable to such suits is a contingency which careful owners may well consider. In the case of government work the liability may not be so great, but cognizance should be taken of the fact that any policy approved by the Government will be used as a precedent for urging that policy upon unprotected individuals.

*Second Competitive Prices.* It is common knowledge that general contractors usually receive lower bids from the mechanical trades than do individual owners dealing directly and there is little reason to believe that the Government will fare better than the individual. Where the general contractor is used moreover, the Government receives a double competition: First, the competition of sub-contractors dealing with the general contractors and, second competition between general contractors. Frequently it occurs that the general contractor, considering a proposal from the mechanical trades excessive, substitutes his own figures and brings the cost of the work within them. Though he does not pretend to know the technique of mechanical design, any more than the technique of cement manufacture, he has a good idea of quality, price and co-ordination of such work with the

whole and uses this knowledge as a part of his service to the owner.

#### *The Element of Delay*

*Third, Delay Contingency.* As Government contracts carry liquidated damages for delay in the date of completion, it is logical to assume that the Government is subject to loss when the stipulated time is over-run. Under the separate contract plan the probabilities of over-running the time are exceedingly great, and if the general contractor is held responsible for that time he must unquestionably include in his bid an allowance to cover such a contingency. If the time is not over-run the Government receives no liquidated damages, but it has paid insurance against it.

*Fourth, Overhead Costs.* One of the basic reasons for the consolidation of independent establishments into large corporations and chain stores is the reduction of indirect and overhead expense entailed by the isolated units and the same principle applies to construction. Four or five independent contractors, establishing their operations independently, possibly erecting separate hoists, or otherwise duplicating certain common functions unquestionably carry a greater overhead expense than when all operations are co-ordinated under a single head. This duplication of overhead invariably exists under such arrangement and owners are obliged to foot the bill.

In the brief presented to the Interdepartmental Board by representatives of the mechanical trades an attempt has been made by generalizing on two cases to deny the economy of the central management system and to show a comparison of the bids that splitting control and responsibility is conducive to economy. The weakness of this contention is suggested by this attempt to generalize on a single instance out of many thousands. Figures of a similar sort showing an opposite conclusion can readily be submitted or doubtless secured from the Government's own files, but such tabulations, unless secured for a great number of projects, are worthless for the purpose at hand. The most significant point of this tabulation of bids is the fact that only three of those companies bidding on the entire work submitted bids for the general construction work alone. The statement made by a majority of construction companies consulted relative to the issue was that they do not care to bid upon work that is performed under separate contracts. They also stated that they should prefer to see this system adopted were it not for the fact that under it efficient co-ordination and conduct of the work is practically impossible.

#### *Quality of Construction*

The quality of construction obtained under one or the other systems of con-

tracting need not be influenced materially by the system itself, as the supervising agency has authority to reject portions of the structure that are improperly constructed or contain faulty materials. Under the single contract plan, however, the general contractor naturally exercises precaution to insure that the work is properly installed as he in the final analysis stands responsible for its quality and guarantees that all portions of the structure will be constructed as specified.

That the architect in private work not only values this inspection and supervision of the general contractor when separate contracts are used, but also forces him to exercise it, is indicated by the standard contract of the American Institute of Architects, which provides for either plan.

Article 41 reads, "If any part of the contractor's work depends for proper execution or results upon the work of any other contractor, the contractor shall inspect and promptly report to the architect any defects in such work that render it unsuitable for such proper execution and results. His failure so to inspect and report shall constitute an acceptance of the other contractor's work as fit and proper for the reception of his work except as to defects which may develop in other contractor's work after the execution of his work."

This paragraph means that the general contractor, even though he has had no supervision of installations under the separate contract, must nevertheless stand sponsor for its quality. This, the mechanical trades contend, he is not competent to do, and upon this contention base their principal argument for the separate contract. It appears therefore that regardless of the number of different contracts involved, the general contractor is asked to stand sponsor for the entire work. To do so without having control of the work is nothing short of a gamble; and when architects and public officials force the contractor to gamble, they can logically expect the latter to cover himself with a contingent charge.

The contract clause quoted above is obviously the result of difficulties that have arisen under the separate contracts system and if there is any preference between the two systems with respect to quality and workmanship, it undoubtedly rests with the single contract and centralized responsibility.

#### *Satisfactory Service*

Satisfactory construction service requires not only that a structure be properly built, but also that it be delivered when due, and a delay in one separate contract may delay the progress of the entire project. The heating plant is essential to the drying of walls and the

execution of certain other work. Plaster, marble, tile, and painting are also dependent upon the heating plant, and if it is not installed at the proper time the owner does not get his project when due.

Friction between superintendents of the different contractors is almost inevitable, since the work of each appears to depend upon the performance of another. Issues arise over the use of hoists, the laying out of conduits, storage of materials, the installation of safety devices and numerous other matters inevitable when a dozen or more crafts are working together. Under such conditions it is hardly conceivable that efficient construction service can be rendered without the presence of a central management, financially responsible for its acts.

With a number of independent companies operating on a building, responsibility is easily shifted until it is practically impossible to determine who is responsible for the commission of various acts. Obviously the type of construction service desired by client owners cannot be supplied efficiently unless some responsible agency has control of every element involved.

Claim has been made by individual engineers and architects from time to time that by supplying management service they eliminate the general contractor and save their client his profit. Such contentions are untenable in view of the actual personal service that must be rendered in the erection of a structure. They do not eliminate the contractor, but merely become a contractor, operating on a cost-plus basis, minus the element of financial responsibility. It is from a portion of this "plus" that the competitive bidder draws his profit.

#### *Step Toward Shifting*

The breaking down of a general contract into separate divisions is a step toward shifting management from a financially interested competitive bidder to the professional man whose ethics preclude financial competition. If carried far enough it must certainly lead to the elimination of commercial competition, in so far as guaranteed cost of construction projects is concerned.

An important service of the general contractor consists in assuming the responsibility for liens. It is an inconvenience to the owner to have to investigate the wind-up of four or five contracts to protect himself from liens when this protection can be given by a single individual. It is partly for this reason that leading bonding companies prefer a general contractor in control of the entire project and that mortgage and loan associations prefer loaning money on those projects under the management of a general contractor.

#### *Public Safety*

On a construction project the accident frequently requires that special care be taken by some responsible head to protect the entire working force from accident. In many states the injured employee may sue the owner in conjunction with the contractor where violation of safety requirements are found, and if the contractor is not good under judgment, can recover from the owner. Here again enters the question of responsibility for safety devices, which under separate contracts can easily be shifted, placing final responsibility upon the owner. The same situation is true with respect to injury of the public where again the assumption of all responsibility by a general contractor is a protection to the owner. In a case of the Government this danger is not so great, but cognizance should be taken of the fact that whatever action the Interdepartmental Board may take will be cited as a precedent for private work.

Separate contracts covering the installation of heating and ventilating, plumbing or electrical work are at present being used to a limited degree by public building departments, practicing architects and certain Federal bureaus. Large corporations have occasionally used separate contracts for mechanical installations when they had special access to the services of one or another of the mechanical trades or had regularly on their staffs men who were expert in these branches; but in instances of this nature the circumstances are considerably more favorable and the situation is different from that prevailing when a public or an individual owner is dealing with a company engaged in business for profit.

It may be stated therefore that precedent for the system exists, but the mere citation of such precedents as evidence that one or another business policy is economically sound, should not be allowed to stand in the face of analysis and demonstrated principles of management. An investigation of the origin of these precedents indicates that they were established not as the result of any conference of the various interests involved, but were put across solely in the interest of one party, irrespective of the interest of client owners, either public or private.

*(Continued next week.)*

**Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.**

*Indemnity Insurance Company of North America  
write practically every form of Insurance except life.*

## **For Lowering the Freezing Point of Concrete—**

**And making it Permanently Hard and Waterproof**

**T**HE addition of "ANTI-HYDRO," a liquid integral compound to the gauging water, lowers the freezing point of concrete from 15 to 18 degrees, allowing you to work right on through the cold weather.

"ANTI-HYDRO" also makes concrete *permanently* hard and waterproof, all in one operation. Easy to use—simply mix it with the gauging water.

For 19 years "ANTI-HYDRO" has proved to be the best by test.

Send for information or specifications on any type of concrete work. Stock carried by Philadelphia, Camden and Trenton dealers.

**Residence**, Wilkes-Barre, Pa. Architect, H. Maier, Coal Exchange Building, Wilkes-Barre, Pa. Owner, Lee Knolly, 129 Sandom street, Wilkes-Barre, Pa. Brick, cut stone, concrete, 36x25 feet, asphalt shingle roof, pine floors, steam heat, electric light. Contract awarded to Le Valley & Wesley, Kingston, Pa.

**Bungalow**, Trucksville, Pa. Architect, H. G. Cook, Miners' Bank Building, Wilkes-Barre, Pa. Owner, Dr. Louise M. Stoeckel, Trucksville, Pa. Frame, 1½ stories, 32x32 feet, asphalt shingle roof, hardwood floors, electric light. Contract awarded to Le Valley & Wesley, Kingston, Pa.

**Residence**, 115 Charles street, Wilkes-Barre, Pa. Architect, H. A. Maier, Coal Exchange Building, Wilkes-Barre. Owner, name withheld. Cinder block and stucco, 2½ stories, 24x27 feet, asphalt shingle roof, hardwood floors, steam heat, electric light, tile work. Contract awarded to Le Valley & Wesley, Kingston, Pa.

**Store and Loft Building**, Wilkes-Barre, Pa. Architect, J. A. McGlynn, Simon Long Building, Wilkes-Barre, Pa. Owner, E. Stern, care of architect. Brick, steel, 3 stories, 40x90 feet, slag roof, pine floors, steam heat, electric light. Contract awarded to J. McGlynn and F. H. Franklin, Wilkes-Barre, Pa.

**High School**, Norristown, Pa. Architect, Oliver Randolph Parry, 1524 Sansom street, Philadelphia. Owners, School District of Norristown, C. I. Moore, secretary of Special Building Committee, High School Annex, 717 Dekalb street, Norristown. Contract awarded to Chester Cont. & Const. Co., Chester, Pa. Electric, Rosse Elec. Co., Beach and Brown streets, Philadelphia.

**Manufacturing Building**, Lansdowne, Pa. Engineer, S. W. Marshall, Weightman Building, Philadelphia. Owners, Keystone Cap Co., on premises. Brick and steel, 1 story, 60x202 feet, slag roof, cement floors, rolled steel sash. Contract awarded W. W. Cochran, 2056 North Van Pelt street, Philadelphia.

**Storage Building**, Lancaster, Pa. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owners, Bayuk Brothers, Third and Spruce streets, Philadelphia. Frame, fireproof, 1 and 2 stories, 60x125 feet, slag roof,

cement floors, rolled steel sash, sliding doors. Contract awarded Herman Wohlsen, Lancaster, Pa.

**Residence (alts. and add.)**, Rosemont, Pa. Architects, Price & Walton, 119 South Fourth street, Philadelphia. Owner, Mrs. A. Shinn Nair, care of architect. Contract awarded R. C. Ballinger, 925 Walnut street, Philadelphia.

**Residence**, Wyndmoor, Pa. Architect, J. William Shaw, Wayne, Pa. Owners, J. Carey & Friedman, Overbrook, Pa. Hollow tile and stucco, 2½ stories, 25x36 feet, shingle roof, oak and pine floors, electric light, hot water heat, iron work. Contract awarded to George Worth, Wyndmoor, Pa.

### Construction News

**School (add.)**, Roebling, N. J. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owners, School District of Florence Township, E. Robbins, Florence, N. J. Brick, 3 stories, 9 rooms, slag roof, maple floors, hollow tile, safety treads (heating and electric reserved), metal lath, tile work, bond, iron stairs. Plans in progress.

**School (add.)**, Florence, N. J. Architects, P. L. Fowler Co., Fitzcharles Building, Trenton, N. J. Owners, School District, Florence Township, E. Robbins, Florence, N. J. Brick, 2 stories, 12 rooms and auditorium, slate roof, maple floors, hollow tile, safety treads (heating, electric and plumbing reserved), metal lath, tile work, bond, iron stairs. Plans in progress.

**Bank Building**, Millville, N. J. Architect, T. E. Ash, 1012 Walnut street, Philadelphia. Owners, Mechanics' National Bank, care of Dr. C. R. Slade, president, Millville, N. J. Brick, stone, 1 and 2 stories, 44x82 feet, vapor heat, electric light, slag roof, marble tile and oak floors. Working plans in progress.

**Church and Sunday School**, Woodbury, N. J. Architect, Charles R. Peddle, 136 South Fourth street, Philadelphia. Owners, First Presbyterian Church, Rev. Herbert Ure, 130 Euclid avenue, Woodbury, N. J. Stone, 1 and 2 stories. Plans in progress.

**Hospital Buildings (13)**, Asyla, N. J. Architect, Arnold H. Moses, Temple Building, Camden, N. J. Owners, Tuberculosis Hospital Association, care of Camden County Board of Chosen Freeholders, Court House, Camden, N. J. Brick, concrete, steel, various sizes. Owners taking bids due December 17th at 2 P. M. Plans may be secured from architect's office.

**School**, Allentown, N. J. Architect, H. A. Hill, Broad Street Bank Building, Trenton, N. J. Owners, Borough of Allentown, E. H. Porter, Allentown, N. J. Brick, 2 stories, 116x60 feet, slag roof, yellow pine floors, hollow tile, safety treads, roof ventilators, metal lath, steam heat, electric light, bond. Owners taking bids due December 19th.

**School**, Westville, N. J. Architect, H. A. Hill, Broad Street Bank Building, Trenton, N. J. Owners, Deptford Township, A. C. Clement, Westville, N. J. Brick, 1 story and basement, 98x68 feet, yellow pine and cement floors, safety treads, roof ventilators (heating and electric work reserved), metal lath, hollow metal skylights, bond. Owners taking bids due December 14th.

**Club House (alts. and add.)**, Salem, N. J. Architect, G. Edwin Brumbaugh, Real Estate Trust Building, Philadelphia. Owners, Eagle Island Gunning Club, on premises. Porches, plumbing, heating, interior alterations. Architect taking bids.

**Central School**, Deptford Township, Gloucester County, N. J. Architect, Harry A. Hill,

Broad Street Bank Building, Trenton, N. J. Owners, District Clerk of Almonessing, School House, Deptford Township, N. J. Brick, hollow tile, steel, 1 story and basement, 98x68 feet (plumbing, heating, electric separate), shingle roof, maple floors, metal lath. Owners taking bids due December 14th.

**Bridge**, over Cedar Bonnet, Manahawken Bay, Ocean County, N. J. Engineer, John L. Vogel, 772 Broad street, Newark, N. J. Owners, State Highway Commission, A. Lee Grover, Chief Clerk, State House, Trenton, N. J. 80-foot single leaf bascule highway span, 30-foot roadway, concrete piers, timber bents, trestle approaches. Owners taking bids due December 10th at noon.

**Bridge**, Freehold, Monmouth County, N. J. Engineer, George K. Allen, Jr., 60 Broad street, Red Bank, N. J. Owners, Board of Chosen Freeholders, County of Monmouth, Bryant B. Newcomb, Freehold, N. J. Concrete, 70-foot plate girder span. Owners taking bids due December 5th at 11 A. M.

**Road Work**, New Jersey. Owners, State Highway Commission, A. Lee Grover, Chief Clerk, State House, Trenton, N. J.

Route 5, Section 12, Netcog-Canal Culvert, Morris County, excavation, rock excavation, reinforced concrete pavement, pipe drains, concrete curbs, wire rope railing.

Route 16, Section 6A, Bernardsville-Passaic River, Morris and Somerset Counties. Excavation, reinforced concrete pavement, pipe drains, concrete curb, wire rope railing. Owners taking bids due December 5th at noon.

**Bridge** over Saddle River, Rochelle Park, Bergen County, N. J. Owners, State Highway Commission, A. Lee Grover, Trenton, N. J. Concrete I beam, 2 spans, concrete pier and abutments, 30-foot roadway. Owners taking bids due December 5th at 12 noon.

### Contracts Awarded

**Bungalow**, Woodbury, N. J. Architect, M. Capobianco, 721 Walnut street, Philadelphia. Owner, J. Hause, 714 Belgrade avenue, Philadelphia. Frame, 1½ stories, 26x43 feet, asbestos shingle roof, pine floors, electric light, pipeless heat. Contract awarded H. H. Fox, 75 Chestnut avenue, Woodbury, N. J.

**Store and Apartment**, Brunswick and Myrtle streets, Trenton, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owner, J. Wojtkiewicz, care of architect. Brick, 2 stories, 20x40 feet, slag roof, pine floors, steam heat, electric light, tile work, metal ceilings. Contract awarded to H. Ball, 2 Moffatt street, Trenton, N. J.

**Fence**, Moorestown, N. J. Architects, Karcher & Smith, 34 South Seventeenth street, Philadelphia. Owner, Seymour Johnson, on premises. Brick, stone, limestone, iron fence, 8 feet high, 1000 feet long. Contract awarded George Shaner & Son, Palmyra, N. J.

**Store and Apartment**, Roebling, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owner, J. Wargo, Roebling, N. J. Brick, 2½ stories, 25x50 feet, slate roof, pine floors, slate roof, electric lighting, tile work. Contract awarded to John Toth, Roebling, N. J.

**Cemetery Building**, Camden, N. J. Architects, B. H. Edwards and A. F. Green, 34 South Seventeenth street, Philadelphia. Owners, City of Camden, C. H. Raymond Staley, City Hall, Camden, N. J. Concrete block and stucco, 1 story and basement, 24x35 feet. Contract awarded Hensgen Brothers, 1146 Mechanic street, Camden, N. J., \$7,457. Heating, H. Hansgen, 322 Erie street, Camden, N. J., \$250. Plumbing, E. J. Riegert Mt. Ephraim avenue, Camden, 710.

## Delaware Construction News

**Residence**, Wawaslit and Scott streets, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, P. J. Ford, Ford Building, Wilmington, Del. Stone, 2½ stories, 30x30 feet, slate roof, hardwood floors, hot water heat, electric light, tile work. Owner will sub-let.

**Store and Apartment (alts. and add.)**, 602 Union street, Wilmington. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, S. Miller, on premises. Brick, structural steel, concrete, 2 stories, 15x50 feet, tin roof, pine floors, electric light, iron work. Owner taking bids.

## Delaware Contracts Awarded

**Hospital (add.)**, Wilmington, Del. Architect, C. R. Hope, Dupont Building, Wilmington, Del. Owners, Delaware Hospital, care of architect. Brick, steel, fireproof, 1 story, 80x80 feet, composition roof, composition and tile floors, hollow tile (heating reserved), metal lath, metal trim. Contract awarded to Smyth Const. Co., 826 Orange street, Wilmington, Del.

## Miscellaneous Construction News

**Hall of Chemistry**, Morgantown, W. Va. Architect, P. A. Davis, 3rd, & Dunlap, 1713 Sansom street, Philadelphia. Owners, West Virginia University, care of State Board of Control, J. S. Lakin, secretary, Charleston, W. Va. Brick, cut stone, steel, concrete, 4 stories, 305x79 feet, slate roof, composition and cement floors, steam heat, electric light, metal lath, tile, marble and terrazzo work, kalamein doors, waterproofing, dampproofing. Owners taking bids due December 28th, 1923.

**Garage**, South Side Road street, East of South Swan street, Albany, N. Y. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, E. Stratton Motor Co., Inc., Albany, N. Y. Reinforced concrete and steel, 3 stories, 118x139x95 feet, 6 inches, slag roof, cement floors, elevator, sprinkler system, rolled steel sash, electric work, plumbing, heating and ventilating plant. Revised plans in progress.

**Convent**, location withheld. Architect, C. J. Mitchell, 15 South Twenty-first street, Philadelphia. Owner, name withheld. Stone, steel, 2½ stories, 60x40 feet, hot water heating, electric lighting, slate roof, plumbing. Plans in progress. Ready for bids in one month.

### Proposal

#### NOTICE TO BIDDERS

Sealed proposals will be received by the Camden County Board of Chosen Freeholders for a group of Buildings for the Camden County Tuberculosis Hospital. Drawings and specifications can be seen and all information had by application to the office of Arnold H. Moses, Architect, Temple Building, Camden, N. J. Bids will be received on Monday, December 17th, 1923, at two o'clock P. M.

### YOUR EXCHANGE

A Builders' Exchange is much like a bank—if you want to get anything out of it you must first put something in. The trouble is that too few of us open accounts. In most exchanges about ten per cent. of the members do 90 per cent. of the work. A greater interest on the part of members would usually be more important than receiving additional members.

We members forget that it is OUR exchange. We are inclined to think of it as belonging to the officers. We lost sight of the fact that it is we members who make up the exchange and that the officers are only our leaders whom we have chosen. The success of a Builders' Exchange rests no more with the president and secretary than it does with the individuals who make it up.

Absentee members is one of the things that make it difficult for a president and secretary to sustain interest in a Builders' Exchange. If the members would get into the habit of dropping into meetings and of occasionally visiting exchange headquarters their investment would pay larger dividends and their organization would be in much better condition to combat the tendencies toward dissolution.

The Grundy Patent Flexible Insulated Coupling illustrated herewith, is designed for the transmission of power from one shaft to another, where electrical insulation and a moderate degree of flexibility are desired.

The two outside flanges can be either keyseated or setscrewed to the ends of the shaft. The central disc is made of special selected leather, and has lugs se-

curely cemented and riveted to each side. The disc supplies the insulation, and the

lugs transmit the power to the outside flanges.

The manufacturers, Charles Bond Company, 617-619 Arch Street, Philadelphia, claim that this Coupling will transmit more power than any other flexible coupling of equal diameter, and that it will sustain uneven strains. Where it is not possible to secure perfect alignment of shafts, the "GRUNDY" will adjust itself to any such inequalities.

Grundy Couplings are made in all sizes, from 3" to 30" both inclusive. They can be run in either direction, and at high or low speeds.

Many Grundy Couplings have been sold for Wood Working Machinery installations, Cotton Spinning Plants, to Pump Manufacturers, and a variety of other types of industry.

Write to Charles Bond Company for a copy of their latest Booklet "F," and they will furnish names of satisfied users to whom you may write regarding the merits of their Coupling.

They offer to send to any well rated concern, a Coupling for testing purposes, and if not entirely satisfactory, it may be returned to the manufacturers at their own expense for full credit.

The Mather Flexible Coupling is recommended for light loads and fractional horse power drives.

### NOTICE OF MEETING

At the request of Mr. F. W. Walker, Chairman, a meeting of the American Construction Council's Committee on Apprenticeship, Vocational Guidance and Craftsmanship has been called for December 5th at Buffalo, N. Y., at ten o'clock in the morning.

This Committee of the Council was created by resolution of the Executive Committee last August, which action was ratified by the Board of Governors of the Council at its meeting on September 21st at which time a resolution on a national apprenticeship program on the part of the Council was adopted as follows:

#### Apprenticeship

"With the desire of furthering a sound and adequate program on apprentice

training for the construction industry and of co-operating in every way possible with the present bodies who are directing their efforts in this field, and who are or in the future may be, inaugurating and conducting agencies for such training, the Board of Governors of the American Construction Council hereby requests the officers of the Council operating especially through its Committee on Apprenticeship, Vocational Guidance, and Craftsmanship, to co-operate with employees' and employers' organizations, building congresses, and all other elements in the construction industry, and with the educational bodies, local and national, in providing for apprenticeship which will be attractive to young men and will afford the fullest means for the employment and training of efficient workers as apprentices, and will produce the skilled workmen needed in the construction industry; and the Board further authorizes as the first essential step in this program the making of a national survey on apprenticeship needs and conditions of labor supply throughout the construction industry through the appropriate agencies of the Council co-operating with all organizations within the industry."

Announcement of the general personnel of the Committee was made in recent issue of the GUIDE, stating also that a meeting of the Committee as a whole would be called shortly.

In addition to the foregoing, a national program on apprenticeship for the construction industry was referred for action to the American Construction Council on November 15th by vote of a conference of all elements of the construction industry called by the Federal Board for Vocational Education.

The American Construction Council thus has an obligation of first magnitude to the construction industry and to the public on the matter of apprenticeship. This meeting of its Committee in Buffalo on December 5th is the first meeting of the Committee as a whole and its importance requires no comment.

## SEASONAL CONSTRUCTION SUBJECT OF CONFERENCE

*Committee Appointed by Secretary Hoover Not Yet Ready to Make Recommendations*

The Committee on Seasonal Operation in the Construction Industries, appointed by Herbert Hoover, chairman of the President's Conference on Unemployment, met on Tuesday, November 13, in the Department of Commerce to discuss the possibility of shortening the dull

seasons which have been found characteristic of construction activities.

The members of the committee are:

Ernest T. Trigg, manufacturer of Philadelphia Pa., chairman; John W. Blodgett, manufacturer, of Grand Rapids, Mich.; John Donlin, president, Building Trades Department, American Federation of Labor, Washington, D. C.; L. F. Eppich, president, National Association of Real Estate Boards, Denver, Colo.; A. P. Greensfelder, contractor, St. Louis, Mo.; John M. Gries, Department of Commerce, Washington, D. C.; Otto T. Mallery, public works expert, of Philadelphia, Pa.; Rudolph P. Miller, engineer, of New York, James P. Noonan, president, Brotherhood of Electrical Workers, Washington, D. C.; William Stanley Parker, architect, of Boston, Mass., and Edward Eyre Hunt Secretary.

While the committee is not yet ready to present its recommendations, it was stated that the discussion included the following factors, which were treated in a progress report of the survey being conducted for the committee under the direction of the Division of Building and Housing of the Department of Commerce: Periods of greatest and least employment for workers in the different building trades, the seasonal work of architects in the office and in the field, seasonal activity of contractors' organizations and equipment, seasonal activity of building material producing industries, some of which have climatic limitations of their own and most of which are forced to irregular production by the demands of construction, the seasonal problems of building supply dealers, the seasonal movement of building materials in relation to railroad transportation, the effects of seasonal construction on public utilities such as gas, electric, telephone and water companies.

The BUILDERS' GUIDE is in its thirty-eighth year of continuous publication.

## DANGER IN SEPARATE CONTRACTS

*(Continued from last week)*

*Policy Proposed by Mechanical Trades Would Undermine Construction Work, Study Made by Associated General Contractors Shows*

For example, representatives of the mechanical trades attempted in 1914 to secure passage of a bill (H. R. 14288 of the 63rd Congress, 2nd session) requiring that all mechanical installations

amounting to more than \$1,000 be handled by separate contract. The bill was assigned to a special committee and reported to the Committee on Public Buildings and Grounds before the general contracting industry was aware of the procedure. The merits of that bill may be judged by the ease with which it was killed through presentation to the committee of a short analysis of the issues involved.

Some of the individuals, apparently working hardest in favor of the bill, were not interested in government work, and the conclusion naturally reached by the general construction industry was that they merely sought to establish a Federal precedent. From this precedent it would have been possible to work through state and municipal departments and eventually into private construction.

In the case of state legislatures, the mechanical trades have been more successful. A number of state and municipal departments are required to award separate contracts for their work. But these measures have obviously been put across by organized minorities representing subcontractors at a time when no adequate organization for presentation of the opposing side existed. In the very method of approach to the subject, by way of lobbying and legislative enactment, these trades have revealed the selfishness of their aims and the sinister character of their actions. The issue at hand is not a matter that should be manipulated by the enactment of laws or even regulations, but is a subject capable of settlement by analysis in the light of existing conditions.

At a time when industry in general is airing its grievances in the open and settling its problems at the conference table where every interest has a voice, the mechanical trades again attempt to avoid a frank discussion and establish an unsound business policy by means of the Interdepartmental Board.

In substantiation of their request for a separate contract policy, they have cited a recommendation of the American Institute of Architects, made in 1913, endorsing the plan; yet it is well known that such a recommendation could not be put through the Institute at the present time. In the opinions expressed by the architects at that time is believed to be the only sound argument for the policy, namely, that it gives the architect a voice in the selection of responsible contractors for the mechanical trades, thus insuring a better quality of work, but at the present time the standard contract of the Institute reserves this right to the architect and makes the separate contract unnecessary for this purpose.

*Not Recommended*

With the exception of certain architec-

tural firms whose opinions are quite generally known and some of whom were invited to give an expression for the brief of the mechanical trades, the great body of architects of the country do not recommend the separate contract system at present as a fixed policy.

Within the past few weeks the South Carolina Chapter of the American Institute of Architects passed a recommendation on this subject. Following the report of a committee that had attended a discussion of contracts at the South Carolina Builders' Exchange in Columbia they recommended:

"That the question of separate contracts or a general contract with sub-contracts be considered and determined for each case as the circumstances may indicate."

The question of separate contracts has long been an issue between general contractors and various architects. It is doubtless true that in dealing with an inexperienced or irresponsible contractor the designer's path is easier when he has a direct contract with the mechanical trades; in fact, he might preferably assume the entire management rather than work with an incompetent or irresponsible company; but to ignore the most fundamental principles of management by introducing the breach of separate contracts and to establish them as a policy is an ill-advised means of remedying existing difficulties, especially when the architect and owner have within their power a real remedy in the selection of a responsible contractor. They have layed themselves open to the same charge that the sub-contractor brings against the general contractor, namely, that he shops for bids and awards too often on a basis of price alone—a procedure that none of them would follow in purchasing a pair of shoes.

In their brief to the Interdepartmental Board the mechanical trades have quoted replies from a number of architects, evidently telegraphic communications, to substantiate their claims. The following is an example:

"Separate bids save money, produce higher grade work."

By what magic this money is saved and the work improved is difficult to imagine; but, in view of the thousands of projects completed satisfactorily each year under the general contract system, a system that has developed in accordance with business needs, the opinion of a few individual professional men should not be given undue weight.

With respect to the statement of costs made by these architects, only one reply can be made. The professional man's cost data is non-existent. He has no true means of comparing the cost of like structures under the two different plans of awarding, and, in fact, has generally

been glaringly uniformed upon the subject. His estimates are usually based on cubical content or floor area which is extremely inaccurate, and his idea of cost is usually derived principally from the bids received. Such generalities indicate the absence of information on actual construction cost that has repeatedly made a failure of the professional man who attempted to manage construction on any basis except cost-plus, fee or percentage. The designer's opinion on cost is usually about as valuable as the contractor's opinion on design, and the opinion of neither one in the other's field should be unduly weighted.

In justice to the mechanical trades it should be stated that they have frequently contended with trade abuses on the part of general contractors and it is but natural that they should desire to deal directly with an owner; but it should also be stated that these abuses are the same that have been perpetrated by client owners and their professional representatives against the general contractor.

Foremost among these degressions is the matter of progress payments, concerning which the sub-contractor resents non-payment of his work until the owner has paid the contractor. Possibly this resentment is justified, but under the separate contract system the mechanical contractor can but change the object of his resentment, from the contractor to the owner or his professional representatives.

Nothing is to be gained by handling this matter of payments with kid gloves. It has been abused by every element involved in the industry, and especially by public bodies. Of the principal transgressors concerned, which are private owners, states, municipalities, the Federal Government, engineers, architects, and contractors, the last-named can by no means be cited as the worst offenders.

Engineers and architects have frequently withheld great sums of money from the contractor for the most trifling causes. Private owners have withheld similar amounts and used the money in their business when interest rates were high. As for public bodies, especially numerous state highway departments and the Federal Government, they seem to have considered payment for the work as the least of their obligations. These circumstances have reacted not only to the injury of the general contractor, but also to contractors in the mechanical trades. The latter as well as the former have had their business disrupted by these abuses of payment, but the situation cannot be corrected by a mere juggling of contracts. The sub-contractor in dealing direct with the owner will merely be in the same predicament as that confronting the general contractor.

It is obviously true that by dealing

direct the sub-contractor would escape any abuse of payment that is wilfully practiced by irresponsible general contractors, but the number of cases of this nature in comparison with the remainder are comparatively small. Assuming, however, that the sub-contractor has a great and just grievance against the general contractor, as alleged, and that the separate contract would benefit him personally, there is yet to be considered the interests of owners, municipalities, states and the Government.

That a governmental body should lend itself to the benefiting of a special group if such action reacts against the interest of the Government, is undoubtedly contrary to the accepted principle of public trust. There can be little doubt that the tearing down of centralized management and responsibility, a system that has demonstrated its efficiency in every line of industry, will react otherwise than disadvantageously to the Government.

It may be that certain trade practices of general contractors are in need of correction as most certainly are those of owners, professional men and public bodies. When the general contractor calls for sub-bids and receives an identical quotation from many different companies, he certainly feels that sub-contract practices in certain trades need correction. But in any event the proper procedure is not through means of legislation that disrupts a sound established system, or by a federal ruling that may be cited as precedent for promoting the interest of a single trade group.

The true equities in this issue of the separate contract policy are not those of the general contractor or the sub-contractor but are those of their thousands of clients, both public and private, who employ construction service. Those clients during the past four years have paid for their projects and it is most essential that no ruling or laws be enacted which will further increase construction cost.

If any trade group is indulging in unfair trade practices a cure better than legislation is a thorough public airing and the establishment of sound practices by means of the conference table. Such an airing and such a conference would undoubtedly receive the support of the great body of general contractors throughout the country. Such a course is infinitely more productive of good than the constant effort of certain trade groups to steal a march by unsound legislation or departmental rulings.

On the grounds that the mechanical trades have been unable to show whereby either the Government or private owners of construction will be benefited by adopting the policy of separate contracts, petition is herewith made to the Interdepartmental Board of Contracts and Adjustment that this policy be rejected.

## As The Editor Sees It

### FORECASTING

Prognosis fills the atmosphere at present even as heretofore. For the last year or two the skeleton in the closet has had multigenerous tremors so violent some prophets would have us believe that its complete disintegration was inevitable. And yet we have not heard a crash, not even a slight thud, which leads us to suspect that the old skeleton is pretty well articulated after all and may be the rattling only indicates that he is busy. What are the business conditions of the country? How profitably employed is labor? And of particular importance to us, how stable are building conditions and what is the outlook for 1924?

#### General Business

The state of general business is that of normally sustained activity rather than that of boom conditions and that is a very healthy condition. Trade is distinctly not reactionary though fluctuating and noticeably cautious on commitments. The public buying power is well sustained. Grain and cotton prices have risen through October, and though there was a decline from early spring prices, the reaction through the summer saw prices return on the average to barely 7 per cent. below the year's high point. Steel production is heavier than anticipated at this time of year and prices are holding, with every indication of stability, despite the summer predictions for a slump this fall. New orders are at present nearly

sufficient to maintain production at an even level and shipments against old orders are heavy, which would indicate that demand was good and consumers not overstocked. At present the United States Steel Corporation is said to be running at about 85 per cent. capacity and independents differently figured are not far behind.

The current issue of the *Guaranty Survey*, issued by the Guaranty Trust Company, offers the following outlook:

"The present scale of business activity is high as compared with any but peak standards. A resumption of the abnormal production and rapidly rising commodity prices, which were the outstanding features of the spring boom, is not a prerequisite of continued prosperity.

"Financial conditions remain highly favorable. The banks have met the peak of the seasonal credit demand with ease. Any rise in money rates of a magnitude sufficient to constitute a restraining influence is highly improbable. Failures have been surprisingly few. The number of insolvencies reported for September was the lowest monthly total in nearly three years.

"Meanwhile, the country's stock of gold continues to increase, and the merchandise export balance for September is indicative of the conditions which make probable a further accumulation of the metal.

"Freight car loadings have reached new

high levels. This extraordinary volume of railway traffic reflects not only the seasonal movement of crops but the heavy production and purchasing of goods earlier in the year. Moreover, the sustained volume of shipments indicates that the trade recession in recent months has not been so great as was suggested by the more pessimistic interpretations of current developments. It is to be noted, further, that grain shipments recently have not equalled the movement in corresponding weeks last year, while the shipments of other commodities have exceeded last year's records. The present withholding of wheat from the market will result in a larger grain movement later than would ordinarily be expected.

"The steel industry reflects, perhaps as clearly as any other, recent irregularities in business trends. Production as in most lines of manufacturing, has declined from the peak reached earlier in the year. Prices of steel on the whole, however, have remained practically unchanged since April. A waiting attitude on the part of buyers is pronounced. Meanwhile, consumption continues at a high rate."

The country has in the early months of this year seen great business activity—in fact, boom conditions—and records have been set. To quote an address delivered in August by Julius H. Barnes, President of the Chamber of Commerce of the United States, ten production records have been set:

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS CO.**  
1729-31 Sansom Street Philadelphia  
BELL PHONE, SPRUCE 1256 KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

"The largest pig iron production;  
 "The largest cotton consumption;  
 "The largest steel ingot production;  
 "The largest crude oil production;  
 "The largest automobile and truck production;  
 "The largest residential construction;  
 "The largest production of locomotives;  
 "The largest volume of mail-order sales;  
 "The largest volume of retail sales;  
 "The largest volume of railroad car loadings."

It is much more healthful to have sustained good business than roller coaster conditions which produce peak records and corresponding despairing depths. For a survey of the conditions over the country as a whole, the current maps in the "National's Business" are most illuminating. Divided in three categories: white, good crops, industrial activity and buying markets; black, the reverse; shaded, medium business; they tell a story of prosperity. In the areas of greatest population where more than 75 per cent. of the people live, business is good. The black areas are confined to regions west of the Mississippi of relatively small compass and about 1 per cent. of the population. The shaded portion of medium business is about half in area but not a quarter in population. The indication is that of prosperity now and to come and for comparison the map of a year ago was shaded well all over with ominous black spots appearing even in the areas of large population.

#### Volume of Building

With general business conditions through the year, building has kept pace driven by urgent demand to make up for shortage and maintain the current supply. Prediction for 1923 set a six-billion figure which was clearly over optimistic, but the restraining factor was not lack of demand but incapacity to produce. Early in the year there was a great rush to build, housing being predominant with large amounts of money available for building loans which encouraged speculative building. Building permits were issued in great volume and the rush of work rapidly absorbed the available material supply and output holding prices at a high level, and the demand for labor was so great that wages were bid up by the offer of bonuses. Reaction was inevitable, taking the form of curtailment in non-speculative building, and the late spring and summer saw a falling off in permits which did not affect either the prices of material or the bonuses on labor because of the demands of the large amount of construction already under way. August showed an upward tendency in building permits and September closely approximates the monthly average of the last

year and a half. The gain for 1923 over 1922 for nine months is 24 per cent., reporting the activities in 152 cities. In 36 Eastern States for the same period the volume in the two years is about equal.

#### Material Prices

At present there is considerable stability in building material prices, with a slight seasonal softening in prices which will probably not endure beyond the first of the year. The current Dow Service Daily Building Reports show that since spring high levels thirteen basic building materials have gone off 11.5 per cent. Of interest also is the table in the last *Labor Review*, published by the United States Department of Labor, which shows the value of the dollar in the purchase of building materials over a ten-year period with 1913 as the standard of comparison.

1913	.....\$1.00	1919	.....\$ .51
1914	..... 1.08	1920	..... .38
1915	..... 1.07	1921	..... .60
1916	..... .83	1922	..... .59
1917	..... .64	1923	..... .51
1918	..... .58		

#### Labor

The building trades now command high wages—the highest in history—which will probably remain stable. The bonus system is a parasitic growth which will cease to be a factor. It cannot exist under normal conditions of employment. The trades at the recent convention were foresighted as to the continuation of construction and more attention than ever before was given to the need of new blood in the trades and provision for apprentices. This activity is country-wide—New York and San Francisco are training "white-collar" men for trades and finding jobs for the men after short intensive training. Carnegie Institute of Technology, in Pittsburgh, has 1,200 night students enrolled for the present year in the College of Industries, 50 per cent. signed to take courses in the building trades. A striking example of the growing interest that labor unions are showing in educational facilities for their respective apprentices was revealed in the recent action of the Pittsburgh International Wood, Wire and Sheet Metal Lathers Union which, on its own initiative, has effected a working agreement with Carnegie Institute to train apprentices of this trade. Apprentices are compelled by the union to attend a special night course three nights a week for two years.

The Apprenticeship Commission of the New York Building Congress outlines its program.

1. Inducing a sufficient number of capable young men to enter the building trades.

2. Encouraging employers to employ their quota of apprentices.

(Continued on page 781)

## Proposals

**TREASURY DEPARTMENT**, Office of the Supervising Architect, Washington, D. C., November 27, 1923. Sealed Proposals will be opened in this office at 3 P. M., December 26, 1923, for the construction, including mechanical equipment of a one-story and basement brick extension, approximately 42x110 feet in size, and a one-story wood frame mailing vestibule, approximately 24x39 feet in size, at the United States Post Office at Poughkeepsie, N. Y. Drawings and specifications may be obtained from the custodian of the building at Poughkeepsie, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## NOTICE TO BIDDERS

Sealed proposals will be received by the Camden County Board of Chosen Freeholders for a group of Buildings for the Camden County Tuberculosis Hospital. Drawings and specifications can be seen and all information had by application to the office of Arnold H. Moses, Architect, Temple Building, Camden, N. J. Bids will be received on Monday, December 17th, 1923, at two o'clock P. M.

(Continued from page 772)

3. Through co-operative effort providing each of these apprentices with steady employment through their apprenticeship period.

4. Through the collective efforts of educational authorities, employers' and employees' associations providing a thorough training that will insure, for the future, craftsmen worthy of the name.

Increase in the number of men is not more important than increase in the efficiency of the men now available for work. Relief through this channel can be secured in a number of ways. At present jurisdictional trade regulations define and restrict the kind of work a man may do and consequently largely increase the number of trades and therefore the number of men required for a given operation. There is necessarily an increase in the cost of the work and in the time required for its execution. Out of these restrictive regulations grow jurisdictional strikes which delay work and cause wide-

spread unemployment of labor. A reasonable loosening or modification of these restrictions can be made an important source of relief, not alone to the public, but to the workers as well, because their employed time could be largely increased and periods of unemployment minimized, by permitting the mechanic to do whatever work he could do properly.

Consideration should be given, too, to the repeated statements to the Committee by builders that the individual output on the part of the workmen has been greatly reduced, not only below the normal work standard of the men now employed, but far below the production of men similarly engaged in previous years. It is desirable that in so far as possible the facts in this phase of the difficulty be ascertained and that working conditions fair to all concerned be established.

In many of the detail operations of building construction it is possible through the introduction of machinery to reduce the cost by increasing the output or by shortening the time required by the process or by reducing the number of men necessary to secure a given result. The failure to improve methods in use is due in some cases to lack of enterprise, in others to the restrictive regulations of labor unions. The critical shortage in the man-power elements will be measurably relieved by the use of machine-power, cost will be reduced, time will be saved.

## Balance the Load

That peak loads are not economical is quite well recognized and yet the building industry has been conducted for years on the peak load principle. For six months each year building progresses with frenzy and at a disproportionate expenditure, while during the rest of the year it slows down and usually in the winter months 50 per cent. of the workmen are out of employment. This is not a necessity, but a habit. Mr. H. P. Gillette said recently in an editorial in *Engineering and Contracting*:

"With fairly good roads, with modern machinery and devices with building materials that can be safely used in freezing weather, winter building can be almost, if not fully as economically conducted as summer building, and when consideration is given to all the elements of cost, then winter building construc-

tion becomes so clearly economic that even the most deep-set habit of aversion to it cannot survive."

## Apportion Expenditure

From various sources it is evident that the real estate bond market is reaching the saturation point. Discount on loans is tending upward and this will curtail speculative building. Mr. Christian G. Norman, Chairman of the Board of Governors of the Building Trades Employers' Association of New York, offers some interesting suggestions:

"It seems to me that if we begin from the premise that our available labor and material will, if used fairly efficiently, result in so many structures by the end of a year, we are starting to view the problem in a practical way.

"Let us say that a survey, made by a competent body, reveals that so many men will be available in the building trades for next year. It can be estimated how much work these men would do in a year and so the number of new structures to come from their labor could be calculated.

"Once the survey is made, the heads of the money-lending institutions might meet to consider the problem. If, with

Philadelphia

so many men and so much material, so many structures can be erected, the money-lending officials could determine the ratio of housing to schools and commercial structures. Arriving at such a conclusion and with the ratio of new building to be put up in the course of a year, the conference could then agree to refuse loans on buildings beyond the percentages arrived at as the result of the survey.

"In the past we have attempted to put up buildings without knowing the amount of labor and material available. After all, a thousand bricklayers can only do so much work in the course of a year. Take the number of bricklayers and other mechanics available and see how much work they could complete, making a fair average for a twelve months' period. Then you will have something practical to work with.

"At the present time a man may decide that his business would increase if he built a new structure. He may go into a market already overburdened with orders for labor and material. The result is instability, bonus conditions in the trades and disorganization.

"When builders of speculative apartments compete for labor, the building of schools, which are very much needed, is retarded. By such a survey as I have indicated it appears to me that we would have all the apartments, schools and commercial buildings that the labor and material available in the course of a year could produce. Certainly one cannot expect to make plans for scores of more buildings than can be produced with the supply of labor and material at our command and then actually succeed in building them."

In this connection it was pointed out by Mr. Norman that a nation-wide survey by architects recently showed that for the next year the building projects of the United States would be proportioned as follows: Housing, 35 per cent.; education, 20 per cent.; public works, 20 per cent.; business, 15 per cent., and industrial, 10 per cent. He did not mean that these percentages should prevail in New York, as local conditions would determine the proportion of each class of structures to the entire building program.

#### Outlook

*The Contractor* has made a survey, obtaining the opinions of many men actively engaged in the building industry which touches the pulse of the situation. Conditions affecting construction activities next spring will be closely similar in character to those which prevailed at the opening of the eccentric building season of 1923. The belief in some quarters seems to be that an unusual amount of work is to be undertaken for completion during the first month of 1924. In some sections of the country where the defi-

ciency in buildings is especially noted, leaders are advocating that winter construction be urged, with a softening of prices of materials and of wages being held as inducement for this step to be taken to avert an extraordinary demand during the months when construction most ordinarily is placed under way.

The outlook for the building program during 1924 is for continued construction in large volume, but with greater stability. An adjustment is very nearly arrived at and with the acceptance of the higher price levels, construction programs may be entered upon with a degree of certainty that has not existed during the last several years.

*Wm. Phillips Comstock in Architecture and Building.*

#### FORECAST NO HIGHER WAGES, HEAVY BUILDING

##### *Association Views on Outlook for 1924 Construction*

Comment on present conditions and the future outlook is thus presented in the current issue of the National Bulletin of the Association of Building Trades' Employers:

"It is perhaps too soon to begin a survey of probable conditions in the labor market for next year, but judging from data which has been gathered by the National Association of Building Trades' Employers, 1924 will not be much different than this year as far as the shortage of mechanics in the building industry is concerned. It is expected that the volume of construction for 1923 will exceed that of any previous year, and from every indication 1924 will equal if not surpass the high mark set this year.

"The movement which was started some little time ago toward the elimination of seasonal unemployment has gained considerable headway, and it is likely that the peak load will be distributed a little more evenly than has been the case heretofore. Judging from the number of large projects which will be carried over into the winter months, labor will be steadily employed through a season during which formerly there was but little work.

"Except in isolated cases there have been no wage increases granted to the building trades during the past two or three months, and many cities report that the bonuses which were paid earlier in the season are no longer necessary.

"It is generally believed that the building trades will not make a fight for higher wages when present agreements expire, but will endeavor to have existing contracts extended for another year. According to the National Industrial Conference Board, American labor is receiving higher 'real wages' than at any

time since 1913, not even accepting the peak period of 1920. The cost of living in July, the latest time when comprehensive figures were available for a survey, was 61.9 per cent. above the 1914 level, and this was a decline of 20.8 per cent. from the peak of high prices in July, 1920. The chief item holding up living cost is rent, which is 75 per cent. above the 1914 level, but on account of the immense home building program which has been carried on this year throughout the country it is believed that lower rents can not help but become a reality."

#### PHILADELPHIA BUILDING PERMITS DROP IN NOVEMBER

*Construction, \$5,406,040, Decline of \$5,544,270 from October*

The estimated cost of all construction for which permits were issued by the Bureau of Building Inspection in November amounts to \$5,406,040 and accounts for 1335 operations. This is a decrease of \$6,010,000, as compared with the corresponding month for 1922, and a decrease of \$5,544,270 as compared with the preceding month of this year.

So far this year the bureau has issued permits for construction totaling \$118,251,940, an increase of \$11,338,260, compared with the same period last year. The increase over last year's business reached more than \$23,000,000 in the summer, but has been steadily decreasing from that time.

Decrease in dwelling construction is one of the reasons for November's low total. In November, 1922, permits were issued for 507 two-story houses, costing \$2,757,150, while in the last month the total was 290 two-story dwellings, costing \$1,625,600. The statement follows:

Character	Permits	Operations	Estimated cost
1-story dwellings..	1	1	\$900
2-story dwellings..	41	290	1,625,600
3-story dwellings..	7	13	205,000

# INTERVIEW WITH FRANKLIN D. ROOSEVELT, PRESIDENT OF THE AMERICAN CONSTRUCTION COUNCIL

## *Emergency on Winter Construction*

"When winter comes," construction men know that "spring is not far behind." Unfortunately through the years the idea became fixed that the winter season was disadvantageous to successful prosecution of construction projects. But winter construction has been done, can be done and should be done.

In the early days of the country's development, when time was less essential than it is today and when our industrial situation was less complicated, it was seemingly justifiable to defer building until climatic conditions made matters a little easier. In our present rapid age when our vast population consumes the limit of production in many lines, construction cannot afford to doze in the atmosphere of mid-Victorian non-aggressiveness.

There is the possibility of a volume of construction for 1924, if present indications are sound, equal to if not greater than for 1923. Realizing this the Council recently urged all those interested in essential building projects in the near future to undertake such work at as early a date as possible in the fall or winter.

If winter is to bring a lull in meeting the demand for construction next Spring will find the construction industry confronted with problems of shortage in materials and labor, transportation difficulties, and a rising market that will seriously interfere with its progress. If that occurs the public will be forced to incur costly delays in getting needed improvements and run the risk of higher if not prohibitive prices.

The advantages of uninterrupted construction throughout the year must be apparent to everyone. Whether used as an ameliorative on transportation problems, or as an aid to continuity of employment, or as a necessity in stabilizing production of materials, or as an effective contribution to the public demand for construction projects, every day added to construction is of incalculable value.

It is curious to note how tenaciously prospective investors in construction projects and builders cling to the obsession that winter work is impracticable. I have indicated how this practice arose in the earlier days and I am sure that a brief consideration of the winter of 1917 will reveal that cessation of construction during the winter months is the result of a

psychological hallucination. The most severe winter weather was encountered in 1917—blizzards, extreme cold, and high winds. But the nation was at war. All along the Atlantic seaboard, docks, piers, foundries, factories and warehouses were in course of construction. Did a blizzard bring delay? Not much. Tons and tons of steel were bolted up while the snowflakes sizzled on the red rivets. Yards of concrete were poured while the tamperers' gloves froze to the shovels. But the work went on. The job was done. The possibility of a twelve months' construction year was revealed.

Notable instances of major operations conducted during the Fall and Winter months during the past year or two with savings in construction costs ranging as high as ten per cent. show the practicability of winter work and the benefits immediately accruing to individual owners and the public as well as to builders and labor on the job.

The country's need today is very acute. The construction industry must stand or fall in its obligation to the public as it meets that need or fails to meet it. It must have the help of those who contemplate building or other construction projects if it is to meet this need. Every day lost means an added accumulation to the growing demand.

The large volume of construction contracted for and already started during the Fall months shows that the public has thus far responded favorably in undertaking winter work. But more winter work should be done. Let every prospective builder who contemplates necessary construction during the coming year go ahead now with the work.

**T**HAT labor unions as well as employers are growing more and more concerned about the apprentice problem is shown in two recent developments toward the training of apprentices at Carnegie Institute of Technology in Pittsburgh. In both of these developments, which have the one ultimate purpose of better training, but which are along different lines of work, the significant parallel has been the fact that the local labor unions have taken the initiative in seeking the apprentice training.

One of these organizations is the local of the International Wood, Wire and Sheet Metal Lathers union which has effected a working agreement with Carnegie Tech whereby the union apprentices to the union will be trained there. As a result of this agreement, 15 apprentices have been recently enrolled at the Institute and are compelled by the union to attend night school classes at three nights a week for the next two years.

The other development is the result of

an agreement between the Local Union No. 12, Amalgamated Sheet Metal Workers' International Alliance and the Sheet Metal Contractors Association of Pittsburgh. Subsequent to this important partnership between organized labor and the employers, a group of more than 60 sheet metal apprentices is now enrolled at Carnegie Tech to receive training one full day a week for the last four years of the five-year apprenticeship period. The agreement takes on added significance from the announcement that the employers have agreed to pay the apprentices their full wages for the day they spend in classes; and the union officials have taken the responsibility of compelling attendance to classes.

While both of these movements are unique, officials of Carnegie Tech and others interested in apprentice training consider them as indicative of a growing tendency among both labor union officials and capitalistic interests to co-operate toward the solution of the apprenticeship problem. Pittsburgh now holds the distinction of being the only city in the country to take definite steps in the training of apprentices by organizing of labor, employers, and educational interests into a common cause.

The final enrollment of the sheet metal lathers, apprentices took definite shape at a recent meeting of the local union of the International Wood, Wire and Sheet Metal Lathers when C. B. Connelley, Director of Industrial Relations at Carnegie Tech, conferred with the members and addressed them in opening meeting. The plan has already received the endorsement of the international officials of this union when the tri-annual convention of this union unanimously endorsed Carnegie Institute of Technology as the official institution to train its apprentices who reside east of the Mississippi River.

A report from the Institute indicates that the training of the 15 apprentices is already progressing rapidly. The two-year course for the class as outlined includes elementary mathematics, mechanical drawing, and shop work.

Among the novel and somewhat radical terms of the agreement between the local sheet metal workers union and the Pittsburgh sheet metal contractors association for the training of apprentices is the stipulation that every apprentice attached to the union "must and shall attend Sheet Metal Class at Carnegie Institute of Technology the last four years of his apprenticeship, or until he has finished the course for Sheet Metal Apprentices." The extent of co-operation to which the employers have committed themselves to assist in the training is recorded in the section of the agreement which says, "The employer shall send the apprentice to the Carnegie Institute of

Technology for trade instruction one day each week from October 1 to May 1 during the last four years of his apprenticeship. The apprentice shall be allowed his regular wage for days while attending school."

A special course for the apprenticeship training has been outlined at Carnegie Tech, the subjects including shop work, patterndrafting, and mathematics. The class has been separated into four subclasses, each group attending the Institute one full day each week. Each apprentice pays his own tuition fee.

As a reward for high scholarship in their studies at Carnegie Tech, special terms have been written into the agreement by means of which it has been made possible for a studious apprentice to receive increased wages. "As a reward of merit," says the agreement, "any apprentice receiving grade 'A' marks at the end of any school year shall receive two months' credit on his next eight months' period, thus reducing that period to six months." As all of the apprentices are paid a definite scale of wages that is automatically increased every eight months, the scholarship plan gives each an opportunity to secure his next regular increase two months earlier each year.

A joint committee consisting of three members of the Contractors' Association, and three union officials, has been selected to act in an advisory capacity between apprentice and school, to adjust all differences that may arise, to terminate the apprenticeship and services of the apprentice if necessary, and to pass upon the admission of the apprentice applicant to journeymanship.

### SOME COLD-WEATHER DON'TS

BY A. J. R. CURTIS

Concise information of value to contractors who will find it profitable to place concrete and masonry in cold weather:

1. Don't delay ordering supplies of sand, gravel and stone for winter concreting. The pits usually close down with the first hard freeze. Sand and gravel frozen in the cars are very difficult and expensive to handle.

2. Don't allow your concrete work to "drag." Many a job of concreting promptly handled will be completed in advance of freezing weather, permitting other parts of the work to proceed during the winter.

3. Don't wait until there is a freeze before planning measures to protect your concrete work. Have tarpaulins, building paper or straw on hand so that they can be used to cover the work as soon as the temperature seems likely to go below 40 degrees over night.

4. In covering newly deposited concrete don't neglect the corners and other

protruding portions. These are the parts of the work most likely to suffer and cause the greatest disfigurement in case of spalling or cracking as a result of freezing. Tears and holes in the tarpaulins and careless lapping are responsible for most frozen spots.

5. Don't use any more mixing water than is necessary for good results—it's the water in the mixture that freezes and less water means less chance for frozen concrete. When the weather becomes continually cold, below the freezing point frequently, the mixing water should be heated. For greatest efficiency use the mixing water as near the boiling point as possible.

6. Don't use aggregates—sand, gravel or stone—which contain ice or frost. If the use of hot water is not sufficient to melt frost and raise the temperature of the mass to 60 degrees, heat the aggregates. This can be done by means of a pipe stove. Move or stir the material frequently so that they are heated uniformly. They may be heated to 150 or 200 degrees.

7. Don't deposit concrete in cold or icy forms. The surface of the concrete may be chilled if you do, with the possibility of spalling. This applies particularly to steel forms. A steam hose or hot water used immediately before placing the concrete will prevent trouble from this source.

8. Don't move the mixed concrete any further than is necessary. Locate the mixing plant as conveniently as possible. This will conserve a great deal of heat.

9. In extremely cold weather don't let the materials be cooled off at the mixer. The mixer drum may be heated by means of a steam jet or an oil torch especially designed for this purpose.

10. When the thermometer is around zero, don't trust to tarpaulins to protect work against freezing. Run live steam under the canvas, or, if the nature of the work will permit use salamanders (coke stoves) or lamps. If steam is available, steam coils will be found more efficient and more easily managed than salamanders.

11. Don't rely upon salt to protect concrete work against freezing. It is inefficient and unreliable. Moderate quantities of salt lower the freezing point a few degrees but also retard the hardening action. Larger quantities of salt are harmful to strength, promote corrosion of reinforcing metal, invite efflorescence (white chalky deposit) and are said to cause trouble from electrolysis. Moderate quantities of calcium chloride, used as recommended by a good engineer, are frequently helpful.

12. Don't depend upon the very small amount of heat generated by the reaction between the cement and water to protect

the work against freezing. The heat so generated is so small as to be disregarded.

13. Don't remove forms too soon. As the temperature drops below 50 degrees Fahrenheit the length of time required for concrete to harden increases very rapidly. In extreme cold, forms are sometimes left in place two or three weeks, especially where the concrete is carrying a load of concrete above.

14. Don't take a chance of collapse by either removing forms or imposing loads on work not sufficiently hardened. Where the slightest doubt exists at least ten square feet of the concrete should be heated with hot water or steam to determine whether it has hardened or is merely frozen.

### A DAY'S WORK

No argument is necessary to prove that the efficiency of construction labor is steadily declining. Nor is it necessary to go into details to prove why. The sad fact is that men simply do not do a real day's work any more. The worst of the situation is that there seems to be little prospect of relief. Certainly restrictions on immigration are not going to be eased; they are more likely to be increased. The union movement is gaining strength constantly. Other conditions all point to less and less efficient labor on construction jobs.

Contractors complain of their inability to make money because of this situation. The facts are that very few are making any money. Nor is this surprising in view of the amount of work still done by hand or by methods that were out of date before the war. In spite of our boasts we still depend largely on hand labor, although many a losing job could be turned into a profit by using machines instead of men.

Low labor efficiency and composition are going to force contractors who stick to hand labor either to quit or to follow the lead of successful concerns and use machines wherever they will replace men to advantage. And it is well to keep in mind that machines are making good on small jobs where they would have been impractical a few years ago.—*Associated Contractor*.

### ANNOUNCEMENT

Mr. B. M. Christman, formerly Philadelphia Representative for Gehret Bros.' Iron Works, has severed his connection with this company November 24th, 1923, and now is associated with The Wm. F. Remppis Co., Ornamental and Architectural Iron Works, of Reading, Pa., as Assistant Manager.

Inquiries may be addressed to Philadelphia Office, 331 Perry Bldg. Phone, Spruce 2589.

**Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.**

## **For Lowering the Freezing Point of Concrete—**

**And making it Permanently Hard and Waterproof**

**T**HE addition of "ANTI-HYDRO," a liquid integral compound to the gauging water, lowers the freezing point of concrete from 15 to 18 degrees, allowing you to work right on through the cold weather.

"ANTI-HYDRO" also makes concrete **permanently** hard and waterproof, all in one operation. Easy to use—simply mix it with the gauging water.

For 19 years "ANTI-HYDRO" has proved to be the best by test.

Send for information or specifications on any type of concrete work. Stock carried by Philadelphia, Camden and Trenton dealers.

## As The Editor Sees It

### NATIONAL CONFERENCE STUD- IES PROBLEM OF APPRENTICE TRAINING IN BUILDING TRADES

The joint committee system of supervision, under which all the interested elements in the industry have representation, has proven to be the most practical method of apprentice training in the opinion of the delegates who attended the conference on apprentice training in the building trades, held in Washington, D. C., in November.

Reports were heard summarizing the experience of the building trades in Philadelphia, New York, and Cleveland, where the joint committee system has been tried out successfully. The work of the Apprenticeship Commission of New York City was described. It was the consensus of opinion of those attending the conference that the joint committee plan should be employed by the industry wherever possible.

Another problem which engaged the attention of the conference was how to standardize methods of apprentice instruction. In this connection, an interesting report of the experience of the Associated Tile Manufacturers was given. A committee of experts, appointed by the Association, has recently worked out and analysis of the 19 basic jobs which are included in the tile setter's trade, with the most efficient method of

doing each job. To further test the practicability of this data, a class of 17 picked boys was sent to Dunwoody Institute, Minneapolis, at the expense of the Association, where they received 13 weeks of intensive training, under the observation of experts. Their experience fully demonstrated the instructional value of the standards which had been worked out.

The Tile Manufacturers favor the plan of giving three months of full-time intensive training in class to apprentices, before they go upon jobs, it was reported. For this three month course, they receive six months of credit on their total apprenticeship period. Contractors have found the pre-employment plan of training much less costly than to place raw apprentices directly on the job where they waste the time of the journeymen. Another interesting report on standardization of training methods was offered by the Master House Painters and Decorators' Association. In this trade, a syllabus and text book for use in training apprentices have been prepared. It was reported that during the past year over 7,500 copies of the text book have been distributed to contractors, and others interested.

After full discussion of different aspects of the problem, ten general principles which should underlie apprenticeship training in the building trades were agreed upon by the delegates. These principles are:

(1) That a local representative committee, composed of all interests in the industry, is essential to determine the needs, and to supervise training.

(2) That part-time or evening schools should be provided to supplement job training.

(3) That "all-around" training is more desirable than specialized training.

(4) That national associations should set up fundamental training standards for apprentice training, and make information thereon available for instructional purposes.

(5) That co-operation with the public schools is essential in promoting apprentice education.

(6) That adequate incentives should be set up to induce boys to enter apprenticeship.

(7) That pre-employment training for employed apprentices or boys under contract to be employed is recommended.

(8) That emphasis should be placed upon dull season classes to follow up the initial training given in the pre-employment period.

(9) That the local representative committee should see to it that a well-qualified instructor is provided.

(10) That the difference between the problems involved in training apprentices for the building trades and those involved in shop trades should be recognized.

The activities of the American Construction Council in the field of appren-

tice training were discussed and the following resolution was adopted by the delegates:

*Whereas*, the necessity for the adoption of a national policy will give direction to the education of craftsmen, modified to suit local conditions.

*Therefore, be it resolved*, That it be the sense of this meeting that the American Construction Council, comprising as it does the various elements making up the construction industry, in co-operation with the Federal Board for Vocational Education shall immediately employ such means as are necessary and proper to put into effective operation methods that will train and enroll skilled workers into the industry.

It was announced by Frank Cushman, Chief of the Industrial Education Service of the Federal Board for Vocational Education, who presided over the conference, that regional conference of representatives of the building trades employers', employees', and manufacturers' organizations are being projected for different sections of the United States under the auspices of the Federal Board for Vocational Education, to discuss local apprenticeship problems.

Among those in attendance at the conference were:

D. H. Sawyer, Washington, D. C., Associated General Contractors; Henry R. Sandholzer, Rochester, N. Y., The Rochester Association; Earl F. Stokes, Baltimore, Md., National Association of Builders' Exchanges; F. W. Walker, Beaver Falls, Pa., Associated Tile Manufacturers; J. A. Brown, Pittsburgh, Pa., Associated Tile Manufacturers; Jos. A. Krausman, Detroit, Mich., Associated General Contractors; Leonard C. Wason, Boston, Mass., Associated General Contractors; D. Knickerbacker Boyd, Philadelphia, Penna., American Construction Council; L. S. Hawkins, Chicago, Ill., United Typothetae; E. L. Bowman, Evansville, Ind., National Trade Extension Bureau; E. M. Craig, Chicago, Ill., Building Construction Employers' Association; A. W. Dickson, Cleveland, O., National Association of Building Trades Employers; W. S. Hays, Philadelphia, Pa., National Slate Association; Burton A. Ford, Washington, D. C., National Lime Association; Wm. P. Carroll Cleveland, O., National Association of Building Trades Employers; J. O. Reed, Pittsburgh, Pa., Master Builders' Association of Allegheny; John M. Gries, Washington, D. C., United States Department of Commerce; Harry C. Knisely, Chicago, Ill., Sheet Metal Contractors' Association; Robert D. Kohn, New York, N. Y., American Institute of Architects; A. H. McGhan, Washington, D. C., Master House Painters' and Decorators' Association; Edward McDonnell, Detroit,

Mich., Contracting Plasterers' International Association; Oscar A. Reum, Chicago, Ill., Contracting Plasterers' International Association; Mrs. Marcella Richardson, United States Chamber of Commerce; Edward Lee, Pittsburgh, Pa., Dwight L. Hoopingarner, New York, N. Y., American Construction Council; J. E. Sweeney, Detroit, Michigan, General Builders' Association of Detroit.

Representatives of organized labor were invited to attend, but were unable to be present owing to previous engagements.

### NEW YORK BUILDING CONGRESS ENDORSES WINTER CONSTRUCTION

The movement to encourage winter building construction, not only as an economic proposition but as the best method of aiding the supply of housing to meet demand, was discussed from its various angles at two largely attended meetings of the New York Building Congress held last week.

The consensus of opinion of engineers, contractors and builders who attended the meetings was that winter building cannot only be carried on successfully from November to March, but a very large saving can be made in the cost of labor and materials.

Facts and figures to prove the claim were presented by several of New York's largest construction firms.

At the first meeting ways and means were discussed, while at the second gathering figures on jobs completed where big savings had been made were presented, proving the case conclusively. Harold M. Shreve, of Carrere & Hastings, outlined generally the reasons why winter building is sound from every economic viewpoint and presented a composite chart which graphically brought out the salient facts regarding the benefits of winter building. In explaining the chart, Mr. Shreve said:

"This chart shows applications, permits to build, in twenty cities, for the United States during the year 1922-23, plotted monthly, and shows that in the Spring everybody gets busy and applies for permits to build. A little later in the year they don't want so many. Last year, after they had made a splurge in March and the situation with which we are all familiar had developed, they made very much less of a fuss in April than they did in March about going ahead. There is your Spring slump of last year.

"The contracts awarded in 27 States are also shown by months. The New York Building Department for the last ten years shows when people make their alterations in New York, and we have made up a composite curve showing when alterations are made in New York, this

hollow tile, steam heat, electric light, metal lath, tile work. Architect will be ready for bids in about ten days.

**Bungalow**, Robbins and Woodland avenue, Lawndale, Pa. Architect, Chris H. Fries, 8237 D street, Fox Chase, Pa. Owner, John McBlaine, Levick street, Lawndale, Pa. Brick, 1½ stories, 35x50 feet, garage, 1 story, 14x20 feet, hot water heat, electric light, tile work, slate roof, pine and oak floors. Ready for bids in a few days.

**Inn**, Mechanicsburg, Pa. Architect, W. P. Erisman, Woolworth Building, Lancaster, Pa. Owner, J. Devers, Mechanicsburg, Pa. Cinder block and stucco, 2½ stories, 35x50 feet, shingle roof, pine floors, steam heat, electric light, kitchen equipment. Plans in progress. Will be ready for bids in ten days.

**Church**, New Freedom, Pa. Architects, Hamme & Witman, City Bank Building, York, Pa. Owners, St. John's Lutheran Church, care of architects. Brick, Indiana limestone, 1 story and basement, 112x75 feet, slag roof, hardwood floors, steam heat, electric light. Architects ready for preliminary bids.

**Inn**, Lancaster Pike, near Lancaster, Pa. Architect, W. P. Erisman, Woolworth Building, Lancaster, Pa. Owner, R. C. Nunnacher, 599½ North Plum street, Lancaster, Pa. Cinder block and stucco, 2½ stories, 35x50 feet, shingle roof, pine floors, steam heat, electric light, kitchen equipment. Architect ready for bids.

**Garage and Repair Shop**, Prangly and Ruby streets, Lancaster, Pa. Architect, W. P. Erisman, Woolworth Building, Lancaster, Pa. Owner, P. S. Devers, 228½ East Walnut street, Lancaster, Pa. Steel, concrete and cinder block, 1 story, 55x207 feet, asphalt roof, concrete floors, steam heat, electric light, rolled steel sash, fire doors. Architect ready for bids.

**Home**, Shiremanstown, Pa. Architects, Lawrie & Green, Commonwealth Building, Harrisburg, Pa. Owners, Methodist Home for Children, care of Dr. E. R. Heckman, 2116 North Third street, Harrisburg, Pa. Fireproof, 3 stories, 70x80 feet, slate roof, hardwood floors, hollow tile, vapor heat, electric light, metal lath, tile work, iron stairs. Architects taking bids due December 21st.

**Instruction Building**, Bryn Mawr, Pa. Architects, Alden & Collins, 75 Newberry street, Boston, Mass. Owners, Baldwin School, Bryn Mawr, Pa. Stone, brick, limestone, steel, 3 stories and basement, 147x74 feet, wing 64x49 feet (plumbing, heating, electric separate), slate and slag roof, cement and maple floors, metal lath, hollow metal skylights, tin-clad and kalamein doors, steel stairs, iron work, waterproofing, dumb waiters. Architects taking bids due December 31st.

**Hospital (add.)**, Walnut street, Reading, Pa. Architect, F. A. Muhlenberg, Ganster

Building, Reading, Pa. Owners, St. Joseph's Hospital, Reading, Pa. Brick, steel, concrete, 6 stories, 45x150 feet, asphalt roof, composition, tile and terrazzo floors, hollow tile, (2) elevators, roof ventilators, waterproofing and dampproofing, terra cotta (plumbing, heating, electric work and elevators reserved), metal lath, tile, marble and terrazzo work, rolled steel sash and skylights, fire doors, bond, iron stairs, ornamental iron work. Architect taking bids due December 19th.

**Majestic Theatre and Hotel**, Broad street, Tamaqua, Pa. Architect, W. H. Lee, 1505 Race street, Philadelphia. Owner, P. J. Higgins Hotel Co., Tamaqua, Pa. Architect taking bids on plumbing, heating, electric work due December 21st.

**Residence and Garage**, East Nineteenth and Providence avenue, Chester, Pa. Owner, Simon Bruner, care of architect. Brick, cut stone, steel, 2½ stories, 53x22 feet, slate roof, oak and composition floors, hot water heat, electric light, tile work, metal lath, bond, iron work. Architect taking bids due as soon as possible.

**Telephone Building (alts. and add.)**, 31-33 North Fifth street, Reading, Pa. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., Seventeenth and Parkway, Philadelphia. Brick, cut stone, steel, 4 stories, 47x30 feet, third and fourth floors addition, 137x30 feet, steam heat, electric light, slag roof, cement floors, bond. Architect taking bids due December 19th.

## Pennsylvania Contracts Awarded

**Building (alts. and add.)**, Kingston, Pa. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Company of Pennsylvania, Seventeenth and Parkway, Philadelphia. Brick, cut stone, steel, 2 stories and basement, 151x30 feet, slag roof, cement floors, hollow tile, waterproofing and dampproofing, steam heat, electric light, metal lath, marble work, sheet metal sash, hollow steel doors, bond, kitchen equipment. Contract awarded Sheppard Const. Co., Wilkes-Barre, Pa.

**Residence**, Academy Manor, Harrisburg, Pa. Architect, C. J. Lappley, Commonwealth Building, Harrisburg, Pa. Owner, Charles Stroh, 222 Market street, Harrisburg, Pa. Stone, 2½ stories, 28x60 feet, slate roof, hardwood floors, electric light, tile work. Contract awarded to W. S. Miller, Telegraph Building, Harrisburg.

**Cottage**, East York, Pa. Architects, Hamme & Witman, City Bank Building, York, Pa. Owner, W. P. Minich, York, Pa. Stucco, cin-

ROOFING SLATE EXCLUSIVELY  
The Only Manufacturers of Genuine Chapman Slate

der block, 1 story, 45x43 feet, asphalt shingle roof, hardwood floors (heating reserved), electric light. Contract awarded to C. H. Boyer & Son, York, Pa.

**Residence**, Lancaster, Pa. Architect, W. P. Erisman, Woolworth Building, Lancaster, Pa. Owner, H. H. Sebonthaeur, Lancaster, Pa. Tapestry brick, 2½ stories, 30x50 feet, shingle roof, hardwood floors, hot water heat, electric light, tile work. Contract awarded to B. Frank Bachman, Woolworth Building, Lancaster, Pa.

**Residence (alts. and add.)**, Elkins Park, Pa. Architect, W. Ellis Groben, Chelton and Lawnton avenues, Philadelphia. Owner, George F. Shuster, on premises. Painting, glazing, mill work, electric light, hot water heat. Contract awarded to Gilbert S. Smith, Sixty-ninth avenue, Oak Lane, Philadelphia.

## New Jersey Construction News

**Warehouse**, New York and Baltic avenues, Atlantic City, N. J. Architect, Vivian B. Smith, Guarantee Trust Building, Atlantic City, N. J. Owners, Seashore Supply Company, A. J. Hepburn, New York and Mediterranean avenues, Atlantic City, N. J. Frame and concrete, 2 stories, 50x80 feet. Plans in progress.

**Store Building**, Bridgeton, N. J., \$40,000. Architect, Walter Custer, Bridgeton, N. J. Owner, Max Goldberg, Bridgeton, N. J. Brick, steel, 2 stories, 75x100 feet, slag roof, pine floors, steam heat, electric light, tile and marble work metal bulks, metal ceilings. Plans completed. Architect ready for bids due December 26th.

**School**, Allentown, N. J. Architect, H. A. Hill, Broad Street Bank Building, Trenton, N. J. Owners, Borough of Allentown, E. H. Porter, Allentown, N. J. Brick, 2 stories, 116x60 feet, slag roof, yellow pine floors, hollow tile, safety treads, roof ventilators, metal lath, steam heat, electric light, bond. Owners taking bids due December 19th.

**School**, Westville, N. J. Architect, H. A. Hill, Broad Street Bank Building, Trenton, N. J. Owners, Depford Township, A. C. Clement, Westville, N. J. Brick, 1 story and basement, 98x68 feet, yellow pine and cement floors, safety treads, roof ventilators (heating, electric work reserved), metal lath, hollow metal skylights, bond. Owners taking bids due December 14th.

**Administration Building**, Hightstown, N. J. Architects, Rich & Matheseus, 320 Fifth avenue, New York City. Owners, Peddie School, Hightstown, N. J. Steel, brick, granite, blue-stone, cast and cut stone, reinforced concrete, 3 stories and basement, 172x80 feet (plumbing, ventilating, electric separate), metal lath, tile, marble and terrazzo work, kalamein and hollow metal doors, iron work and stairs, hollow tile, granolithic and concrete floors, slag roof, florotyle, bronze work, alberebe work. C. W. McCutchin, chairman of Building Committee, Peddie School, taking bids due December 15th.

**Hospital (add.)**, Trenton, N. J. Architect, William A. Klemann, First National Bank Building, Trenton. Owners, City of Trenton, care of Mayor, City Hall, Trenton, N. J. Brick, 1 story, 15x18 feet, tin roof, composition floors, electric light. Architect taking bids due December 14th.

**Small Pox Hospital (add.)**, Municipal Colony, Trenton, N. J. Architect, William A. Klemann, First National Bank Building, Trenton. Owners, City of Trenton, care of Mayor, City Hall, Trenton, N. J. Frame, 2 stories, 40x100 feet, slate roof, composition floors, steam heat, electric light. Architect taking bids due December 14th.

**Doctors' Cottage**, Municipal Colony, Trenton, N. J. Architect, William A. Klemann, First National Bank Building, Trenton. Owners, City of Trenton, care of Mayor, City Hall, Trenton, N. J. Brick, 2 stories, 40x26 feet, slate roof, pine floors vapor heat electric light, tile work. Architect taking bids due December 14th.

**Residence (alts. and add.)**, Trenton, N. J. Architect, Walter Hankin, 39 East State street, Trenton, N. J. Owner, R. J. Carey, 179 Cooper street, Trenton, N. J. Brick, stucco, 2½ stories, 17x60 feet, slag roof, pine floors, hot water heat, electric light, metal lath, tile work, general alterations. Lowest bidder: Harrison & Fisher, 35 Perdicaris street, Trenton, \$10,322.

**School**, Twenty-ninth and Mickle streets, Camden, N. J. Architect, Clyde S. Adams, 2038 Spruce street, Philadelphia. Owner, Cramer School, A. Austermuhl, secretary, Camden, N. J. Owners taking bids due December 17th, 2 P. M.

## New Jersey Contracts Awarded

**Buildings**, Salem, N. J., \$1,250,000. Architect, private plans. Owners, Congoleum Co., Inc., Salem, N. J. Brick and steel, 3 stories, 65x100 feet, 1 story, 103x120 feet, slag roof, plank floors, rolled steel sash and skylights, fire doors. Contract awarded Austin Co., Jefferson Building, Philadelphia.

**Factory**, Bridgeton, N. J. Architect, Walter Custer, Bridgeton, N. J. Owners, Bridgeton Ind. Development Co., Bridgeton, N. J. Brick, steel, 1 story, 50x154 feet, slag roof, cement floors, steam heat. Contract awarded to George Maier & Brothers, Bridgeton, N. J.

**Stores (5) and Apartment Building (6)**, Pine avenue, Wildwood, N. J. Architects, Byron H. Edwards and Alfred Green, 34 South Seventeenth street, Philadelphia. Owner, S. Lotuff, care of architect. Brick, stucco and concrete block, 2 stories, 65x100 feet. Contract awarded T. J. McGarry, Ocean City, N. J.

**Alterations and Additions**, 505-11 Arch street, Camden, N. J. Architect, Clarence E. Wunder, 1415 Locust street, Philadelphia. Owner, C. Cutler, care of architect. Brick, slow burning, steel, 2 stories, 66x159 feet, irregular, slag roof, pine floors, metal lath, fire doors, ornamental iron work. Contract awarded Bazahler & Schalke, 1183 Jackson street, Camden, N. J.

## Delaware Construction News

**Bank**, Smyrna, Delaware. Architect, E. C. May, Dupont Building, Wilmington, Del. Owners, Fruit Growers' National Bank, care of architect. Brick, limestone, structural steel, 3 stories, 40x58 feet, slag roof, composition floors, vapor heat, electric light, tile and marble work, vault, bank fixtures, ornamental iron work. Preliminary plans in progress.

**Schools (2)**, site undecided, Wilmington, Del., \$500,000 each. Architects, Guilbert & Betelle, 665 Broad street, Newark, N. J. Owners, Delaware School Auxiliary Association, Dupont Building, Wilmington, Del. Brick. Architects selected. Owners will take general bids. Too early for details.

**Grade School**, Clayton and Maple avenue, Wilmington, Del., \$600,000. Architects, Guilbert & Betelle, 665 Broad street, Newark, N. J. Owners, Delaware School Auxiliary Association, Dupont Building, Wilmington,

Del. Brick. Sketches in progress. Too early for details. Owners will sub-let.

**Parochial School**, Harrison and Lindley avenues, Wilmington, Del. Architects, Gleason, Mulrooney & Burke, 404 South Broad street,

Catholic Church, Rev. J. S. Gulk, Wilmington, Del. Stone, 1 story and basement. Preliminary plans in progress.

**Building (alts. to factory)**, Southeast Corner Fifth and French streets, Wilmington, Del. Architect, Amos W. Barnes, Perry Building, Philadelphia. Owners, E. Sutro & Sons Co., Wilmington, Del. Remodeling basement into cafeteria, remodeling fire tower, general alterations. Owner taking bids due December 13th.

## Delaware Contracts Awarded

**School**, Newark, Del. Architects, Guilbert & Bettelleff 665 Broad street, Newark, N. J. Owners, Board of Education of Newark, Del., Dr. W. H. Steel, president, Newark, Del., and Delaware School Auxiliary Association, Dupont Building, Wilmington, Del. Brick, concrete, semifireproof, 2 and 3 stories, 170x118 feet (plumbing, heating, electric work separate bids). Contracts awarded: General, Northeastern Const. Co., Lexington Building, Baltimore, Md., \$181,000. Plumbing, heating and ventilating, T. T. Weldin, 916 Orange street, Wilmington, \$43,160. Electric work, E. F. Higgins & Co., 843 Tatnall street, Wilmington, Del., \$4,476.

**Parish House (alts. and add.)**, Wilmington, Del. Architect, E. C. May, Dupont Building, Wilmington, Del. Owners, Westminster Presbyterian Church, care of architect. Stone, 2½ stories, 44x100 feet, hot water heat, electric light, tile roof, hardwood floors, tile and marble work. Contract awarded to E. L. Johnson, 1316 Clayton street, Wilmington.

## Miscellaneous Construction News

**Church and Sunday School**, Sixteenth street, Washington, D. C. Architects, Charles W. Holton & Son, Witherspoon Building, Philadelphia. Owners, Hamline Methodist Episcopal Church, Washington, D. C. Stone, 1 and 2 stories, slate roof. Plans in progress.

## Miscellaneous Contracts Awarded

**War House**, Camp Holabird and B. & O. R. R., Baltimore, Md. Owners, Standard Sanitary Mfg. Co., Baltimore, Md. Architects, S. Doescher & Son, Farmers' Bank Building, Pittsburgh, Pa. Reinforced concrete, 2 stories, 350x130 feet, concrete floors, miscellaneous iron excavating, reinforced concrete footings and foundation walls for following buildings: Machine shop, blower house, clearing house, slush house, comfort station, power house, enamel shop. Contract awarded B. A. Groak Const. Co., 847 West North avenue, Pittsburgh, and care of Fleishman Co. Job, Twentieth and Venango streets, Philadelphia. Reinforced steel, 1,200 tons, American Steel Co., 10 South Eighteenth street, Philadelphia. Structural steel, 3,700 tons, Fort Pitt Bridge Works, Pittsburgh, Pa.

**Plant (7 buildings)**, Amcelle, Md., near Cumberland, \$1,500,000. Architect, private plans. Owners, American Cellulose & Chemical Mfg. Co., on premises. Brick and steel,

steam heat, electric light, slag roof, concrete floors, elevators, rolled steel sash and skylights, floor hardener, iron work, 1 and 2 stories, 460x135 feet, 280x135 feet, 75x75 feet, 75x100 feet, 40x60 feet, 60x250 feet, 50x100 feet. Contract awarded Austin Co., Jefferson Building, Philadelphia.

Quarterly meeting of Philadelphia Builders' Exchange and Employers' Association in the Gold Room, Hotel Adelphia, Tuesday evening, December 18th, 1923, at 6.00 P. M.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., November 27, 1923. Sealed Proposals will be opened in this office at 3 P. M., December 26, 1923, for the construction, including mechanical equipment of a one-story and basement brick extension, approximately 42x110 feet in size, and a one-story wood frame mailing vestibule, approximately 24x39 feet in size, at the United States Post Office at Poughkeepsie, N. Y. Drawings and specifications may be obtained from the custodian of the building at Poughkeepsie, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 788)

being the result of an average of ten years.

"Those are some of the things I would say can be remedied," said Mr. Shreve. "The figures have no relation one to another, so far as totals go. They only show tendencies. It looks as if somebody was getting busy this Fall to do some work this Winter.

"It is not only ahead of us for this Winter, but it has been done during the Winters that are passed, and I am going to put my little testimonial in on the side of one where we have actually effected a program and are now under way.

"There was a saving of \$87,710 on this job, the building work of which cost \$750,000," said John Lowry, Jr., showing a picture of a well known New York apartment house, built by his company during the Winter of 1922-23.

"To offset that, the expenditures for Winter construction were a total of \$3,863 or about one-half of 1 per cent. of the total cost of the job." This extra cost was for the protection of workers and materials and supplying the necessary heat.

"If you consider the bricklayer production in the Summer of 1922—100 per cent.—in the erection of this job during the Winter of 1922-23, the bricklayer production was 109 per cent. or 9 per cent. more than the Summer of 1922.

"Comparing this with 1923, this last Summer, the bricklayer production was 91 per cent. In other words, on this job carried on during the Winter, I produced 18½ per cent. more brick per day

per man than I was able to do this last Summer on brick work.

"Bricklayers working on the job got \$10 a day. The payroll for the entire job was \$28,150 for bricklayers.

"If it had been continued this last Summer of 1923, the dropping off in production, or in efficiency, if you so choose to call it, would have added \$5,630 to the cost of bricklaying alone. If you consider the bonus award of \$4, that is, \$14 per man today, the bonus would have cost \$11,260 more. In other words, the brick work on this job would have cost \$16,890 in addition to the \$28,150 as actually paid for bricklayers.

"The payroll on this job for bricklayers, carpenters, labor and engineers amounted to \$130,667. If it had been done last Summer, rather than the last Winter, the dropping off in production and the bonus award would have added \$25,680 to my payroll.

"In addition to the saving in labor, the saving on purchases of materials in sub-contracts on this job amounted to \$16,030 over the prices I was able to procure in the Summer of 1922. In other words, between labor and the purchase of materials and sub-contracts there was a saving of \$87,710 on this job the building work of which had cost \$750,000.

"To offset that, the expenditures for Winter construction were as follows: Temporary protection to labor and material, \$871; tarpaulins cost \$667, with a salvage of \$442, net cost \$225; temporary heat, salamanders, cost \$668; salamanders, \$302; coke, \$302; boiler attendants, labor, \$1,036; coal for boiler heating, \$150; temporary lighting, labor and service, \$196; snow clearing, \$111; a total of \$3,863, or about one-half of 1 per cent. of the total cost of the job.

"Bear in mind that the labor saving was \$25,680 and the material and sub-contract saving was \$62,000 to offset \$3,863 Winter protection cost.

"Charles M. Schwab realized the value of Winter construction. As a matter of fact, some time ago he gave me an order to build half a million dollars' worth of buildings.

"They could be built next Summer just as well as this Winter. He required that they be finished on Sept. 1, 1924. The work is in course of construction now. I have some of it enclosed and some of it in the open. I will keep my gang steadily employed the Winter through, in bad days working inside and on good days on the outside. Through this means I will save many thousands of dollars in the course of construction.

"Build in Winter and keep the architect, builder and sub-contractor and labor busy. It will better balance up the industry."

That working with concrete during the

cold season is practical from every standpoint was explained by W. J. Barney, President of the Barney-Ahlers Construction Company. He placed himself on record that "more Winter construction is the acknowledged remedy for seasonal unemployment in the building industry."

"You have been told forcibly of the social and economic evil of seasonal unemployment for the carpenters, the bricklayers, in fact, for all those who directly do the work of our industry," said Mr. Barney "and to many this problem of seasonal employment seems to be solely a picture of its hardship to the mechanics and workers in the various trades.

"This is but the sharp foreground of the picture: its larger background shows that where the mechanic is unemployed also is unemployed the contractor, material manufacturer, the architect and all others involved in our great industry—we one and all suffer from this curse of seasonal variation in the volume of our business, and finally in the horizon you see the public paying during the period of intense activity higher wages, higher prices and larger fees to compensate for the period of enforced idleness, during which the mechanic must live on his earnings' savings, the contractor carry his overhead, the architect maintain his staff and the material manufacturer offset his plant investment and factory overhead.

"In short, this is not a problem whose solution will be beneficial to mechanics alone, but is one in which all sections of this Building Congress are vitally interested, and to which they could all well afford to contribute liberally for its solution through the more even distribution of construction throughout the entire year.

"I have had our estimating department take from their files typical estimates, and using these various factors, the same building would have been estimated by us in August at \$208,000 and estimated by us today for Winter construction at \$203,000, showing a saving to the owner of at least \$5,000, or 5 per cent., this including all cost of Winter protection. Therefore under present labor and material conditions, it is certainly conservative to say that Winter construction costs no more than Summer work."

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

REPORT OF PROCEEDINGS OF  
MEETING OF APPRENTICESHIP  
COMMITTEE, AMERICAN  
CONSTRUCTION COUN-  
CIL HELD AT HOTEL  
STATLER, BUFFA-  
LO, N. Y., DEC.  
5, 1923

A national program on Apprenticeship for the construction industry was launched today by the Apprenticeship Committee of the American Construction Council at the first meeting of the Committee, held at Buffalo, Dec. 5, 1923. This Committee is composed of representatives of all elements of the construction industry throughout the entire country, including employers, manufacturers and professional bodies, as well as the various trades and crafts representing labor in the industry. Forty persons representing all of these groups, were in attendance.

The purpose of the Committee recently created by the American Construction Council, is to further the development of apprenticeship in the construction industry.

The meeting opened with a message from the President of the Council, Franklin D. Roosevelt, of New York, read by Dwight L. Hoopingarner, the Executive Secretary, calling attention to apprenticeship as "one of the great problems in American industry today," and pledging the full support of the Council in the task of finding a solution of this problem. Mr. Roosevelt emphasized the duty before the Council of "arousing the country to the need of placing skilled manual labor on a par with the clerical and non-manual occupations in public esteem," and the necessity "for more appreciation of the dignity of Craftsmanship."

Mr. D. Knickerbacker Boyd, the Executive Vice President of the Council, then spoke, emphasizing the importance of the problem before the committee.

Mr. J. C. Wright, Director of the Federal Board for Vocational Education, welcomed the committee in its efforts, and pledged the support of his Board in every way within its power.

The best wishes and cordial support of the Secretary of Labor, Hon. James I. Davis, who is chairman of the Federal Board for Vocational Education, were transmitted to the Committee by Thomas J. Williams, of the United States Department of Labor.

The Secretary of Commerce, Hon. Herbert Hoover, sent a telegram extending his greetings to the committee in "coming with one of the most difficult problems that faces the country today," stating that there is no solution except by co-operation of the employer and la-

bor which is the purpose of the committee. Mr. Hoover said further: "It is my hope that the Department of Commerce will be able to give active support to such constructive measures as may be agreed upon by all groups represented in the Council."

The Committee's chairman, Mr. F. W. Walker, Secretary of the Associated Tile Manufacturers of Beaver Falls, Pa., in his opening remarks pointed out the necessity for a thorough grounding in fundamentals and training for permanency in all apprenticeship work.

John Donlin, President of the Building Trades' Department of the American Federation of labor, proposed a nationwide survey of apprenticeship needs in the construction industry, and pledged the co-operation of labor in training a sufficient number of apprentices to meet these needs.

A national survey of apprenticeship needs, and distribution of labor in the construction industry was authorized and instructed to be carried out as the first essential step in the program. Also an exhaustive study of instructional facilities and standards for apprentice training throughout the country in the construction crafts was specially provided for. Arrangements were also made to set in motion machinery for handling the additional phases of the problem such as development of craftsmanship, providing employment for apprentices, and the like.

To carry forward its program the committee directed, by resolution, the appointment of four sub-committees: first, a general executive committee; second, a committee on survey of apprenticeship needs and distribution of labor; third, a committee on instructional facilities and standards, and fourth, a committee on finance.

Mr. John W. Cowper has already accepted the Chairmanship of the Committee on Finance, and a definite plan to raise funds to carry on the apprenticeship movement in a large way has already been put in motion. The personnel of the other committees will be announced shortly.

Among the speakers were John W. Cowper, of Buffalo, President of the Associated General Contractors of America; Fred F. Moran, of the New York Apprenticeship Commission; C. A. Prosser, Director of the Dunwoody Institute; Thomas R. Preece, First Vice President of Bricklayers', Masons' and Plasters' International Union of America; George Dautel, of the Mason Contractors Association, Cleveland; Wharton Clay, Commissioner of Associated Metal Lath Manufacturers Chicago; Edward McDonnell of the Contracting Plasterers' International Association, Detroit; W. W. Charters of the University of Pittsburgh; John F. Morris, of the Carnegie Insti-

tute of Technology; E. E. Bowman, of the Trade Extension Bureau, Evansville, Ind.; L. S. Hawkins, of Chicago, Ill.; G. M. Bugniet, of the International Brotherhood of Electrical Workers, Washington; James Smith, of the Sheet Metal Workers' International Association, Brooklyn; James G. Higgins, of the United Association of Journeymen Plumbers, Brooklyn, N. Y., together with others representing employers, manufacturers, labor and educational bodies.

The American Construction Council itself is the national body representative of all elements in the construction industry including contractors, labor, architects, insurance and real estate interests, Chamber of Commerce, Public Utility Construction Departments, State, Federal and Municipal officials interested in construction, Associations of Builders' Exchanges and of Building Trades employers and similar federations of building interests, and the public.

The officers of the Council are, in addition to Franklin D. Roosevelt, President; Mr. D. Knickerbacker Boyd, of Philadelphia, Executive Vice President; Jos. H. Alexander, Cleveland, Vice President; John E. Lloyd, of Philadelphia, Vice President; John B. Larner, of Washington, D. C., Treasurer; Wright D. Goss, of New York City, Assistant Treasurer, and Dwight L. Hoopingarner, of New York City, Executive Secretary.

#### THE CHIMNEY—ITS DECORATIVE VALUE AND EFFICIENCY

The outside chimney is one of the decorative features of certain types of house, adding a touch of color, breaking the wall surface and giving a shadow where it is effective. Care should be taken, however, that while serving its decorative purpose the efficiency of the chimney itself is not diminished.

It is easy to see that, if the outside of the chimney is cold and the inside several degrees warmer, this condition may affect the hot gases seeking to escape through the flue. Those on the outside wall cool faster than on the inside, and drop back slightly, causing a small riot among the gases in the flue, and the passage out is stopped or slowed up, quite as really as with a material obstruction. In cold climates the outside chimney should be double walled, with an airspace, up to the eaves, if the usefulness of the chimney is not to be impaired. Above the roof all walls are outside walls, and while heat may be lost there is not the interference with the draft.

The draft or drawing power of a flue, as any one knows who stops to think about it, is due to the tendency of hot gases to rise. Gases expand with heat,

the tiny particles separate and become farther apart; hot gases are therefore lighter than cold gases. Since all gases are, comparatively speaking, perfectly fluid, the lighter, warmer, volumes rise and the cooler and heavier volumes fall, an interchange due to gravity. It can easily be seen, therefore, that a protected chimney that keeps the gases from losing their heat as they pass up the chimney will produce a better draft than one which is not well protected and permits the gases to lose their heat and drop back. That is to say, an interior chimney one running up through the inside of the house, will give more uniform draft than one built up as a part of the outside wall, unless it is protected.

In chimney operation, height produces draft and net cross-sectional area gives capacity. That is to say, the higher the chimney, the greater the "pull" on the chimney gases and the less the danger of smoking at the furnace or fireplace. Also, the larger the net area of the chimney, the more coal may be burned in a given time without choking the chimney enough to kill the draft. These two factors, height and area, are inter-dependent and each should be considered with the other.

#### *Chimney Height*

The least height of a chimney, for residences, is variously stated from 30 to 35 feet, according to James D. Hoffman, of Purdue University, in the Heating and Ventilating Magazine. Chimneys less than 30 feet high are likely to be erratic in their action. The furnace codes approved by the various engineering societies interested in furnace heating give as a least value 26 feet above the furnace grate, which, to say the least, should be considered a minimum in all cases.

#### *Cross-sectional Area*

In the average residence the cross-sectional area more frequently causes trouble than the height. The ideal section for any air duct is a round one. This does not work in very well with the brickwork, however, and a square section should be approached as nearly as possible, keeping in mind that whatever shape is adopted, it must fit the usual sizes of bricks.

In practice, no chimney flue should be made of less internal area than an 8-inch round or an 8 by 8 inch, and in moderate sized houses the working conditions of the chimney are improved if this is enlarged to 8 by 12 inches.

There is a dead zone next to every frictional surface—and that next to an ordinary brick wall is extravagantly large,—which is ineffective as free area. The gases moving along such a surface do not slide but roll and tumble, thus farther restricting the free passage up the chim-

ney. In a chimney having a thin rough flue, this neutral zone may be sufficient to practically nullify the entire draft area.

One prominent authority states that this zone extends a distance of 2 inches or more from each brick surface toward the center of the chimney.

#### *Chimney Lining*

All chimneys should be lined with hard-burned flue-tile lining throughout the entire length of the chimney, the tile to be not less than  $\frac{3}{4}$ -inch thickness. This is especially necessary if the chimney is built of a single thickness of brickwork or of a cement block construction. There are two reasons for this. The smooth interior of the tiles eliminates a large amount of the friction usually found between the moving column of gases and the inner surface of the brickwork, and, in addition, tiles are a safeguard against fire, since they cover up any open joints or cracks often occurring in the average mortar joint in one-brick walls.

An examination of many attic chimneys will reveal such cracks. They are easily distinguished by a feather of black soot and dust around the opening. In normal operation, the draft within the chimney is sufficient to cause the surrounding air—say attic air, because most of the roof fires begin in the attic—to pull inward toward the chimney. When a heavy deposit of soot collects upon the inner surface of the chimney and this is fired by an extra hot fire in the furnace, the gases trying to escape from the top of the chimney are so great that the "pull" of the chimney is overcome and a reverse condition takes place. The pressure within the chimney now is greater than that of the air without and the hot gases are forced out through the cracks to the attic, igniting any combustible material in their path. Many of our mysterious roof blazes could probably be traced to this one defect in chimney construction. Tile linings effectually cut off gas leakages to the house, but emphasis should be laid upon the fact that the lining should be of the best and strongest quality, each section end should be well bedded in a good mortar joint, and the entire lining should be laid against the brickwork but should not be slushed in. This will permit the lining to expand and contract free from the chimney proper.

#### *Heat Loss*

If the loss and damage caused by buildings that leak heat too freely were as visible as the loss and damage a leaky roof makes there would be in actual operating existence today a class of builders as extensive as roofers, fully prepared to protect every class of building against preventable heat losses—*Keith's Magazine*.

## TELLS PRES. COOLIDGE HOW BUILDING STANDS

*S. W. Strauss Outlines Construction Situation During Recent Visit At White House*

President Coolidge recently was told that building operations might well be expected to continue in the same volume indicated during the past season, receiving this view when S. W. Strauss, of New York, recently visited the White House for a conference with the Chief Executive.

Following the conference, Mr. Strauss said.

"There is a potential need for \$8,000,000,000 worth of new buildings in the United States, notwithstanding the fact that building operations this year are 25 per cent. ahead of 1922. Last year the nation's new volume of business was \$4,000,000,000. This year it will be \$5,000,000,000, so that it would require fully a year and one-half of the most intensive operations to make up the present shortage.

"With these large activities there is no likelihood of any unemployment problems, at least in the immediate future. Also the \$5,000,000,000 of new buildings means that just this much new capital is being created which will contribute its share of Federal, State and municipal taxes.

"An important development is the great increase of Winter building. October building permits throughout the country were 25 per cent. ahead of September, although ordinarily building operations decline sharply in October. Last month's permits were 30 per cent. ahead of October last year.

"These facts reflect the universal confidence of the business interests of the country in a continuance of present business expansion.

"Organized labor in the seventeen building crafts has lost 60,000 members in the last two years. This supply is being replenished through apprenticeship schools, but it will possibly be two or three years before the labor supply is commensurate with the demands."—*Associated General Contractor's Bulletin*.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

## As The Editor Sees It

### PROFESSION OR BUSINESS

BY EARNEST FLAGG AYRES

Every time the schools and colleges close for the summer, the country is flooded with aspiring young engineers, all of them in a receptive mood to "accept a situation," and some of them desperate enough to "take a job," if it comes their way. Yet few, if any of these young men have examined the possibilities open to them in the newest profession on earth, the one that is still rather uncertain as to whether it should be classified as a profession or a business, that of contracting.

After a boy has graduated with high honors from his alma mater, where both his class mates and the faculty predicted a brilliant career for him, he naturally is quite disappointed to find that no one seems to care a depreciated ruble whether or not he ever gets a chance to display his ability.

For eight years, all the way through high school and college he had heard of the wonderful opportunities that were open to the trained civil engineer. If he had ever wondered why those who dealt so glowingly on the rewards awaiting the practicing engineer should be sticking so closely to an underpaid job as teacher, he had dismissed such suspicions as unworthy. Probably his instructors were idealists, preferring to spread knowledge over the fertile fields afforded by immature minds than to make their fortunes in commercial life.

He gazed at figures purporting to show the incomes of men at the head of the profession, and pored over the advertisements stating the princely rewards awaiting the draftsman or instrumentman. He determined to show the world how easy it would be for the young graduate, one who had chosen his university with scrupulous care, to make a fortune before many years had passed. Dad might still be working at an age when he should have retired long before, equipped with such a magnificent training, would show the old gentleman a thing or two.

Now that he was graduated things looked different, somehow. He discovered, for the first time that universities, technical schools, agricultural colleges, and even correspondence courses had loosed upon an afflicted world about two building engineers for every job that was open. He had left his name, together with his address, his telephone number, and copies of his references, at every engineering office in the city, at first hopefully, but later with an experience born of knowledge that this was merely a polite way of disposing of his case for keeps. It certainly was discouraging, and the sardonic, yet pitying smile on Dad's face was far from reassuring.

And all this time there was a job waiting for him, a good job, if he would take it. He had visited the chief engineers, city engineers, consulting engineers, would be engineers, and almost engineers in search of employment, but had kept away

from the men who actually do things. Not design them, but erect them, risking their time, their money and their reputation on the integrity of their work.

Contractors are looking for the young man with a technical training, and who is willing to use his hands as well as his brains in this world. It is a man's game. Why not get into it?

But, says the youngster, he objects to leaving the oldest profession in the world to go into a roughneck business. That is where he is wrong—on both counts. Civil engineering, far from being one of the oldest professions known to man, is one of the newest. The so-called engineering marvels of by gone ages were built by brute strength. Everyone has heard the definition of an engineer: "A man who can do for one dollar what any d—n fool can do for two." In the olden days, they used three or four. Not dollars, maybe, but men, which would mean the same thing in these days. Back in King Tut's time, men were cheap. Brick layers did not get \$12 a day with overtime. They were lucky to get sufficient eats, and time enough to sleep. It was the same in Caesar's time, and in the days of Louis XIV and in the merry period of Charles the First. In fact, it was the same down to comparatively recent times.

Look at our country. We hear a great deal about the engineers who were responsible for the opening of continent, running the lines of railroad which made

possible the settlement of prairie, mountain and valley. Wrong again, as per usual. There were no engineers in those days, as we understand the term today. Only surveyors, and anyone who has striven to pick up some of the old corner stakes is not particularly impressed with the accuracy of these old times.

Those railroads were financed by business men. Men with a vision who were willing to take a chance. The engineering was regarded as a necessary, but foolish expense, which ran the overhead up something sinful. The details of construction were worked out by the builders, the contractors, if you please. Those whom we now call engineers set the stakes, fought the Indians, ate jerked beef, killed rattlers, and forever established high boots and a flannel shirt as the proper equipment for those who were to follow. Today the rattlesnake is gone, together with the approved antidote for his poison, but the high boots remain, a symbol of early days in the west.

Civil engineering was pretty much of a hit and miss proposition until recently. If you missed the first shot, you kept guessing until you hit it. The only profession which is new is the one the boys should get into—contracting.

The two professions have grown up together of late years. Back in the days when they were only Military Engineers, with a whole regiment of men to do the job that would have required a squad under ordinary conditions, there were no contractors. The Lord of the Manor or the Baron, or His Royal Highness the king, or some other exalted personage was in charge of the work, theoretically. Practically, he furnished the men, slave or free, and left the management of the project to his overseers—with whips. They did a good job, too. They had to, or else get down in the ditch and let someone with a stronger arm, and less conscience, handle the proposition. Results were all that counted.

Then it dawned upon some lazy genius that it might be cheaper, and less bother, to engage some chap to do the work, paying him a small sum for his services. Sort of a "Cost Plus" proposition. (There's nothing new under the sun, you know.) After a while, not wishing to be bothered with details—and bills—the employee was asked to name a definite sum for which he would do the job, win, lose or draw. Thus was the contractor born, though not yet as a professional man.

He was a gambler. He had to be to get into the business in those days, so he usually started out with little or nothing to lose. Nearly always he was a graduate from the pick and the shovel, or from the seat on a one-horse, two-wheeled dump cart, a seat which the foreman smashed with a grub hoe every time

he got a chance. Drivers were supposed to walk.

He saved his money until he had a little ahead, and then went into the business on his own. If he lost his entire working capital, he could recoup by getting his old job back for a month or so, and he did not take large contracts. There were none to take at that time.

It is quite the fashion to sneer at these early contractors. Most of them were immigrants, late from the Emerald Isle. They had their choice of going into prize fighting or into contracting, both occupations being certain to gratify that lust for battle which is so ingrained in our Irish friends. Their early education had been sadly neglected, according to our standards, but they knew to a nicety just how much work a man or a horse should turn out in a day, and they saw to it that there was no "sojering" on their jobs. Would that we could have more of them in the building industry at present.

Many of them could neither read nor write, but their supply of free flowing profanity, and their picturesque vocabulary, cannot be matched in these degenerate days. They were rough men. They needed to be. It was a rough game in those times. But they turned out the work, and that was all that mattered.

Conditions have changed today. More and more is the contracting business demanding a larger supply of brains, and somewhat less brawn. No longer is it necessary for the boss to be able to lick any guy in the outfit, nor the foremen selected because they have fists like sledgehammers, which they can use with the precision and finality of pile drivers. Jobs are too big to handle by the old methods. Organization not oratory, is needed.

The contractor of 1923 is a gentleman, in a gentleman's profession. Even though he wished to adopt the tactics which were so successful a generation ago, he has a tremendous financial responsibility to sober him. The smallest concrete mixer costs him more than the old contractor's outfit was worth. He must meet bankers, business men, investors, and manufacturers, and must meet them on their own plane. The business of the nineteenth century has become the profession of today.

No longer can the contractor be entirely ignorant of the theory of structures. That was all right when lumber, brick and stone were the materials used for nearly all large buildings, but the advent of reinforced concrete changed these conditions. No longer is it considered good form to sneak a bag of cement out of each batch of concrete. Even the foreman knows that the factor of safety will not stand such harsh measures.

## START THE NEW YEAR RIGHT!

ADD A "STERLING" CONVERTIBLE LEVEL

to your equipment and insure accurate lines and levels when needed. Out-of-date methods and equipment don't pay—especially leveling equipment. The "Sterling" Level combines two instruments in one—changed in ten seconds for use as a Transit. Convertible uprights fold down clear of telescope and level vial when not in use—an exclusive "Sterling" feature.

The "Sterling" is easiest to operate and thoroughly reliable. It saves time and prevents mistakes. Write Today for Illustrated Folder G-12.

Va.

(Continued from page 804)

No longer does he place his steel by eye, trusting it to get covered before the inspector shows up. Yet, miraculously, some of the early structures, built by contractors and engineers, neither of whom knew much about the business, are still standing. Sheer good nature, probably, for by all the rules, they should have collapsed long ago.

There is nothing to be ashamed of in entering this new profession. Rather should shame be felt by the youngster who stays out. He will need all the theory he learned at college and then some. He will need all the tact, all the self-reliance, all the courage, all the nerve, all the sporting blood he can muster to make a success in this new field. Most of all he must mingle with men, giving him a confidence in himself which scientific research and straight engineering fails to afford.

Look around. The buildings which line Main Street of every city from the smallest hamlet to that provincial center of the universe—New York City; the bridges which span the tinniest creek and the largest stream; the road over which the latest Weary William—the auto tramp—wends his panhandling way; the houses where young America comes home to sleep, after all other places are closed; all these and more are the work of the contractor. The builder, if you prefer the term.

Is it not a profession worth entering? Who better can leave not one, but many enduring monuments to his skill and energy? As for the financial rewards, of minor consequence, maybe, but of vital importance if a certain pair of brown eyes are to preside over your breakfast table in the near future, just compare the bank accounts of the most successful contractor and the most noted engineer in your locality. If you think this unfair, compare the automobiles used by the poorest members of both professions. The contractor wins, both ways. He may be broke occasionally, for his is still a gambler's game, but he always comes back. The engineer, on the other hand, rarely reaches any point to come back from.

Get into the game!—*National Builders' Association.*

I make it a rule never to write a grouchy letter—I telephone.

## ARE YOU MASTER OF YOUR BUSINESS OR A SLAVE TO IT?

Most contractors who read this heading will say, "What a foolish question. Of course I am master of my business. I built it. Nobody knows more about it than I do. Nobody can tell me how to run it." Do you remember the old fable of the frog and the ox? Someone twitted the frog of being so much smaller than the ox. The frog being a conceited fellow, said, "Pooh, I can make myself bigger than that ox if I want to. Just watch me." Therefore he began drawing in great breaths and puffing himself out like a balloon. He kept this up until suddenly he burst. Some contractors are like the frog. They are so anxious to be rated "big fellows" that they take work by under bidding their competitors without considering if they can finance it or if they have the knowledge, experience, or organization necessary to carry out the work. Their days are numbered. The unfortunate thing about it is that during the process of weeding them out, they take much work from the legitimate contractors and their poor workmanship and lack of business sense brings public criticism and condemnation against the entire construction industry.

Two remedies are apparent, both of them educational. First convince the public that there is no economy in giving work to inexperienced and irresponsible contractors. Second, show these contractors how they ought to do business.

In regard to the public the best means of showing them the advantages of employing established firms is through constant publicity, and through membership in the Contractors' Association. Once convince them that the seal of membership means ability, skill, and responsibility and the public will be looking for members to do their work. On the other hand, the association can give its members all kinds of information and help which will result in greater profits and less risks. Show a contractor how, by a better understanding of overhead, insurance, costs, better buying and quicker deliveries, he can protect his business and how, by establishing a reputation for quality workmanship, he can get business without cutting his bids, and he will become a better competitor and will become proud of his reputation and of his chosen business.

Even among the old-timers and apparently successful contractors in all trades, there is much chance for improvement. There are many contractors who have been in business many years, have an enviable reputation for good work, and show a profit each

year, but they have done little more than earn a fair living. They lose on one job and gain on another and are satisfied if they show a profit of a few thousand dollars at the end of the year. Of course contracting is always more or less of a gamble. It is so dependent on the weather, on stable prices, and on the quality and quantity of labor. But the professional gambler generally bets on sure things. He studies the chances and eliminates all possible risks. The contractor can take a lesson from him. One of the best ways of increasing one's knowledge is by profiting by the experience of others. Perhaps you hesitate about asking questions of competitors for fear that they will conclude that you don't know your business. Better acquaintance through association membership will do much to remove this fear which is generally groundless. Then there is the possibility of consulting the Secretary of the Contractors' Association. He knows how to keep his mouth shut. He can get you much information which will be of great value to you without breaking any confidences. Why don't you try it out?

—Associated Contractors, Boston, Mass.

## WALL TROUBLES

Walls in old houses are liable to give one a lot of trouble and it is well to know how to treat them.

A damp wall is a constant source of trouble, apart from being unhealthy. The damp may be due to a variety of causes, the principal one being porosity and a faulty or absent damp course.

For the porous wall, two coats of transparent petrifying liquid applied in dry weather will answer. A faulty damp course can be remedied by the insertion of a double layer of slates, the upper layer covering the joints of the lower. Where the trouble occurs in a semi-basement, the outer wall should be cemented for the necessary height with sand and cement and a waterproof compound that one may purchase in hardware stores.

Then we have defective plastered walls. Often the use of wall board is the best way to deal with these, and by its means suitable panel effects may be obtained. And it is well to remember that wall board is obtainable not only in widths of 3 ft. and 4 ft. and more and in long lengths but ready-prepared with special finishes, closely approximating various plaster, tile, etc.

The plaster wall that is full of surface inequalities is always an eyesore, yet much may be done to hide its defects. The application of a wall paper having an all-over pattern is effective in this way, but it may be that a pattern is not desired. An alternative method, then, is

to divide the wall surface into large panels and styles, leaving the styles plain, and heavy stippling the panels.

A plaster wall that shows signs of early deterioration is best dealt with by lining it with white ceiling paper. On this two coats of flat wall varnish or water paint will give a satisfactory finish.

For kitchens or other parts of the house where this papering is adopted and a glossy finish is desired, give the paper a coat of size, a coat of glossy oil paint, a coat of flat paint, and finish with glossy enamel.

### *Kitchen Walls*

Strange as it may seem, places like kitchens and pantries which are subject to steam are often more satisfactory when the walls are coated with size distemper or oven lime white. The reason is that these porous grounds absorb the moisture, and so obviate unsightly streaks.

New cement walls should be left at least six months before they are painted. Washing the cement with a 50 percent solution of zinc sulphate crystals in water will also hasten matters when other paints are used. New plaster can be painted with water paints, and these may subsequently be painted or enameled without removal.

The indiscriminate use of one brand of water paint over another has led to a good deal of dissatisfaction in subsequent chipping and scaling. Removal is a tedious business and it is often preferable to apply a thin coat of zinc or white lead paint before renewal.

Asbestos cement sheeting presents suitable grounds for hand or brush painting. The gray material provides an admirable ground for an effect of grey oak, or grey maple. Cool browns may be obtained without altering the color of the ground. But generally speaking, it is a mistake to put successive coats of paint on these wall sheetings. Instead, the white, for instance, may be given a thin transparent glaze of color, grey, green, blue, red and quiet tones will be thus produced. The wall boards may be similarly treated, provided that undue suction is stopped or the staining color kept open—by a fair proportion of either linseed oil or copal varnish being incorporated.

Glazing and staining will often bring the walls into closer harmony with the rest of the room. Whatever the pigment which should be purchased ground in oil use for mixing purposes equal parts of copal oak varnish. Japan gold size, raw linseed oil and turpentine. Add these together before making the stain. On any white ground where the suction has stopped, use a glaze of yellow; scarlet for red tones; cobalt for blue tones, etc. Intermixing may take place, except that of cadmium and ultramarine blue.

In practice, brush the glaze color out bare, so that the ground color shows through. If it is patchy, stiple the whole panel or wall. Finally, take any dry, flat, wide brush—a stiff paperhanging brush will do—and draw it down from the top to bottom of panel. This may be remedied by painting a narrow band, say an inch wide, all around the panel. When dry the wall may have a certain amount of gloss. If objected to, apply after an interval of thirty-six hours, a coat of flat varnish.

#### *Bathroom Walls*

Bathroom walls are best if varnished or gloss enameled; and one may note that there is opportunity for gay color here in place of the usual white. There are prepared sheetings on the market that one may purchase—thin metal sheetings—in sheets 24x18 ins. The walls must be dry, and should be given a coat of oil paint, as this provides a grip for the fixing paste before applying.

When fixing these sheetings snap a center line on each wall and work from it. The butt joints of each row are so arranged that they come directly in the center of the full sheets above in the manner of bonds in brickwork. The paste is spread on the back of the metal with a small trowel and the sheets immediately pressed into position. Part of it will ooze through the joints and should be cleaned off before it sets hard. Clean up finally with a soft rag dipped in paraffin or turpentine.

Another surface treatment for walls is with grass cloth papers, crinkled or embossed canvas papers. The crinkled and embossed papers require careful hanging, otherwise the butts will always be noticeable. Free lime in a plaster wall must be neutralized before papers of this sort are hung, or the color will be destroyed. A coat of petrifying liquid will generally suffice, though on occasion it should be followed by a stout white lining paper. For fixing some of these fabric materials a strong flour paste is needed. Work the material flat from the center outwards with the palms of the hands. (The mouldings should have been previously temporarily removed.) Secure for the time being the edges of the canvass with the drawing pins, and finally fix the mouldings over the material. This makes a neat permanent job.—*National Builders' Association.*

#### STAINED WOOD SHINGLES FOR SIDEWALLS

Of the various materials available for covering the roof and exteriors of wooden buildings, it is doubtful if any have a greater degree of attractiveness, combin-

ed with effective economy, than do high grade stained wooden shingles.

Stained shingles are particularly adaptable to the side walls of the small house. For this purpose they may be secured in any color or shade that may be desired. They can also be laid in various patterns to accentuate certain architectural lines and areas in the wall. Perhaps one of the most popular ways of using shingles for this purpose is to employ the large size unit which is twenty-four inches in length. When this shingle is used a wide exposure may be obtained which may be as much as ten or eleven inches. The effect is that of wide bands running about the building. A similar result is obtained through the use of wide siding sometimes known as Colonial siding. This particular effect is very much desired on certain types of small homes.

Compared with the cost of siding for the covering of side walls, stained wooden shingles often show a considerable saving. The actual amount that can be saved varies with the local markets and with the qualities of the materials that are used. For example, it will be found that there are various costs of siding depending upon what kind of wood is used, its quality, and the width and thickness of the pieces. These different costs apply also to shingles. The variation comes from the kind of wood that is used and its quality and from the size and thickness of the shingle units.

#### *Economy in Shingled Side Walls*

One of the prominent shingle manufacturers has made a detailed investigation of the comparative costs of ready stained wooden shingles and siding. He has compared the finest grade of large red cedar shingles with wide Colonial siding of the same quality in a use that will give about the same architectural effect. The saving shown for the shingles amounted to something over \$150 on a small house of two stories approximately 25 feet by 30 feet in size. The saving comes principally through the decreased cost in the material itself and in the charge for painting.

This brings out one of the greatest advantages of stained wooden shingles as applied to a side wall—namely that they do not require frequent repainting. The stain penetrates the shingles and lasts for an indefinite period. The quality of the stain, it must be understood, is something more than that of color. It serves as a protection for the wood, making it last much longer.

#### *How Shingles Differ*

Of course it is not to be inferred that any kind of shingle will do for your walls or for your roof. There is as much difference between grades of shingles as

there is in clothing. High grade wooden shingles are made from wood that is clear from knots and that is sawed like the best grade of soft wood flooring. That is to say, it is edge grain or straight sawed. The annual rings make parallel lines down the long dimension of such shingles. This makes them much more durable. These edge grain shingles present a surface which readily absorbs and holds the protective stain. The regular quality of the wood is such that the shingles do not warp, curl, or split as will the flat grain, knotty shingles. When it is understood that if a shingle starts to curl that is the beginning of the end, it will be seen how desirable it is to use only the quality that will lie flat at first and that will stay flat. Properly stained, high grade shingles applied as they should be, whether to the wall or to the roof, should last a long period of years.

In regard to the application of wooden shingles on the roof, it must be said that it is the low-grade poorly applied wooden shingle roof that has been the fire menace—not the high-grade properly applied roof of this material. As a matter of fact, a number of experiments conducted by reputable authorities have shown that the tight wooden shingle roof is a good protection for your house. It is by no means the highly inflammable affair that it is often pictured to be.

One of the most commonly neglected features is the matter of nails. Good zinc coated nails should always be used for wooden shingles. Often the shingles are blamed for a faulty roof whereas in reality the nails are at fault. Certainly it is folly to attach a high-grade roofing material, like the best wooden shingles, with cheap iron nails which will rust out in a short span of years and allow the shingles to work loose. For this reason zinc coated nails only should be used. They cost perhaps a few dollars more for the whole house but they will not rust and will hold the shingles in place about as long as the shingles themselves will last, which should be for a long term of years.

When shingles are stained in the proper manner with good colors, the expense of recoloring and yearly painting is reduced to the minimum. Of course there will have to be some staining from time to time, but not as much of this as is necessary for wood siding.

Do not think that you can get any of these suggested benefits from every ordinary wooden shingle. It must be of the best grade and the color must be good. The method of applying the preservative is important. Reputable manufacturers have perfected stains, preservatives and methods to conserve your interests. Do not waste your money on an inferior shingle.—*The Small Home.*

## **For Lowering the Freezing Point of Concrete—**

**And making it Permanently Hard and Waterproof**

THE addition of "ANTI-HYDRO," a liquid integral compound to the gauging water, lowers the freezing point of concrete from 15 to 18 degrees, allowing you to work right on through the cold weather.

"ANTI-HYDRO" also makes concrete **permanently** hard and waterproof, all in one operation. Easy to use—simply mix it with the gauging water.

For 19 years "ANTI-HYDRO" has proved to be the best by test.

Send for information or specifications on any type of concrete work. Stock carried by The Van Sciver Corporation, Parkway at 24th St., Philadelphia, Pa.

## As The Editor Sees It

### VIEWING THE CONSTRUCTION INDUSTRY

*Elements Engaged in Building Operations  
Cited as Gaining Marked Progress  
in Co-operation*

By JAMES J. DAVIS  
Secretary of Labor

OUR times have witnessed tremendous steps in the direction of organization and co-operation in industry. Probably no single group in our daily life has demonstrated greater progress toward industrial co-operation than your group—the construction industry. We are approaching the day when labor shall be really free, when industry shall be really unshackled. The day of master and man in American industry is past and gone. It is my hope that with that day there will disappear the period of discord and strife in American industrial life, and that we shall enter upon an era of intelligent co-operation based on mutual interests, mutual good-will and mutual understanding between the worker and the employer. We find many forces working toward this end in America today, as time after time we demonstrate the futility of fratricidal conflict between those who manage industry and those whose labor makes industry possible. We are learning, in the sad school of bitter experience, that industry is a single structure, and that a house divided against itself shall not stand.

Everywhere, and in every industry,

employers and workers are learning that they stand no longer in the relation of master and servant, as they stood for so many centuries, but that they are co-workers, partners, whose joint and mutual interests march side by side. They are coming to know that the prosperity of industry depends upon production and that industrial warfare is production's greatest enemy. To end industrial warfare we must have understanding and co-operation between the men who manage industry and the men upon whose labor industry is founded. The greatest prosperity, for employer and employed, will be found in that industry where the employer knows intimately the problems and needs and aspirations of the workers, and where the workers have a sympathetic understanding of the difficulties and discouragements and purposes of the employer. Many of our present day industrial difficulties were unknown in the days when industry, organized on a smaller scale, permitted closer personal relations between the men who managed industry and the men who worked in it. The successful surmounting of these difficulties lies in developing some system whereby that close personal relationship may be restored or some adequate substitute found for it.

We are gradually learning throughout American industry that employer and employee must stand or fall together, that one cannot long prosper at the expense of the other. If one gains, both must gain.

If one loses, both must lose. If one dies, both must die.

### *In Valuable Position*

No American industry can demonstrate so clearly as can the construction industry that need for organization and co-operation which is the greatest requirement in our modern civilization. The days when a single mason and a single carpenter went to work side by side to build a house are gone forever. The construction of a building today is as highly integrated an industry as there is in our whole scheme of things. A modern skyscraper, costing millions in its construction, calls together thousands of men in two score of widely differing crafts, each with his own special qualifications and with his own special interest in the work in hand. It is only through the closest cooperation and the most highly developed organization that so tremendous an undertaking can be carried through successfully. When every individual concerned in so vast a task can be assured that his interests and the interests of all who work with him or for him will be properly safeguarded, we can be sure that the project will move forward smoothly and rapidly. Both employer and employee throughout the industry will benefit through co-operation, for neither can succeed if the other fails.

Your industry faces a tremendous task. Upon it rests the responsibility for regaining in construction all of those years which, during the World War, were lost in destruction. I have seen

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

estimates which calculated the deficiency in construction at between ten and twenty billions of dollars. In other words, we lack structural facilities to that amount which would have been provided during recent years if there had been no war. Of this amount it is estimated that five billions of dollars are now needed for the construction of homes. We are short some 1,500,000 homes in this country. That is, there are 1,500,000 American families who are waiting for the construction industry to provide them with buildings in which to make their homes. But construction costs must be kept down if these families are to be able to occupy new homes. These figures show merely what we have lost and what we must make up. They do not take into account our annual requirements by reason of growth of population and for replacement purposes and immigration.

To perform this great task, you have at your command great resources. The construction industry today is certainly second only to that of agriculture in its economic importance—in the actual amount of money involved in its operations. In its many ramifications it employs a great army of men, more than 11,000,000 of our people being directly or indirectly dependent upon the construction industry. Throughout our commercial and industrial life men look upon the construction industry as the great barometer of business. In the volume of our building permits we read the index of our financial and industrial progress. When construction gains, we know prosperity is with us. When building lags, we know that conditions are bad. Thus construction bears a vital importance in relation to our whole industrial fabric. It is the great influence for good or bad in our financial progress. Anything that we can do to stabilize, to better conditions in the construction industry, will react for the betterment of our whole industrial fabric.

The transcendent importance of the building industry in our national life is seldom brought to the attention of the average layman. It was forcibly brought home to me by a recent survey made by the Bureau of Labor Statistics of the Department of Labor of construction in sixty-eight cities of 100,000 population or more in the United States. This survey showed that in those cities alone the building permits issued indicated an expenditure of \$3,251,887,696 in eighteen months, during 1922 and the first six months of 1923. The figures showed, too, that construction is on the increase. The first six months of 1922 showed 156,974 permits at an estimated cost of \$954,658,587. The last half of the year showed 160,223 permits at a cost of \$1,011,788,029. The first half of this year showed 193,027 permits and a total cost of \$1,285,441,180. Twenty-two per-

cent. of all the skilled and unskilled labor in America is engaged in the building industry, and the building bill of this country amounts to about \$200 a year for every family. The industry, in its demands for material, calls for the service of about 250,000 freight cars on our railroads.

#### *Cannot Be Isolated*

No industry so important as this one can be considered as a thing by itself. It must be thought of in relation to the interests of the community generally. The construction industry concerns not alone labor, materials, contractors, and other elements of the industry, but the public as well. Ultimately the fate of the industry, like any other productive industry, depends upon the public, for the public is the consumer—of buildings just as it is of shoes, or cotton goods or any other product. No industry can succeed unless it wins and keeps the confidence of the public. For upon this confidence depends the willingness of the public to deal with it.

There have been in the past many deplorable conditions in the building industry. The whole system of contract construction and its relations with labor have been under charges particularly in our larger cities. I hope, and I believe that these evil practices are all behind us, that the building industry has seen the light, and is on its way toward that ultimate goal of all industry, the era of good-will. We are making progress toward the true era of good-will, the period of the golden rule in industry. I see the forward movement every day in my work as Secretary of Labor. I know that in almost every line of endeavor the men who work for a living and the men who manage the industries in which they are at work are constantly coming closer together, are constantly gaining a better appreciation of each other's problems. It is clear to me that you are doing that in the construction industry.

#### *Believes in Principle*

I am a firm believer in the principle of trade unionism. It is fundamentally sound, but, like every other great human institution, it has its faults, and it can be abused. Not many men in any industry today will quarrel with the trade union principle. But some of its abuses have stirred many men in the management of industry against it. One evil that has crept into our trade union system, an evil which in the building industry has in the past grown to deplorable proportions, is the jurisdictional dispute. As a trade union worker, I honestly believe that the jurisdictional dispute has done more injury to the cause of organized labor in the United States than any other single thing. The spectacle of workers employing the strike weapon against their own

(Continued on page 829)

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., Dec. 20, 1923. Sealed Proposals will be opened in this office at 3 P. M., Jan. 21, 1924, for the construction, including mechanical equipment, of a one-story brick and tile non-fireproof Post Office building, approximately 62 by 64 feet in size, at State College, Pa. Drawings and specifications may be obtained from the Custodian of the site at State College, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## NOTICE TO BIDDERS

TAKE NOTICE that at a meeting of the Board of Commissioners of the City of Atlantic City, to be held in the Commission Chambers, City Hall, on the thirty-first day of January, 1924, at 3.00 o'clock in the afternoon, sealed bids will be received and opened for the Building Construction, for Plumbing and Gas Fitting, for Electrical Installation and

for Heating, in the proposed Memorial Building for the Colored Veterans of All Wars, to be located on premises situate on the South-erly side of Adriatic Avenue, between Kentucky and New York Avenues, Atlantic City, N. J.

Bid blanks must be used by all bidders, and can be obtained by applying to the office of Howard A. Stout, Architect, Guarantee Trust Building, Atlantic City, N. J.

Full information as to the requirements imposed upon bidders will be found in the Bid Blanks and in the Specifications also to be obtained at the office of Howard A. Stout, Architect.

All bids must be accompanied by a certified check drawn to the order of Albert Beyer, City Treasurer, as follows:

Building Construction, one thousand dollars (\$1,000).

Plumbing and Gas Fitting, three hundred dollars (\$300).

Electrical Contract, three hundred dollars (\$300).

Heating Contract, five hundred dollars (\$500).

For all further instructions consult the NOTICE TO BIDDERS, the Form of Proposal and Specifications.

The City Commission reserves the right to reject any and all bids, without giving any reason therefor.

LOUIS A. STEINBRICKER,  
Director of Department of Streets  
and Public Improvements.

(Continued from page 820)

fellows is a reflection upon our whole civilization. It is in violation of the whole spirit of trade unionism and it has done much to discredit the trade union principle in the minds of many employers. The jurisdictional dispute is the specter which has frightened the management of many industries and has caused many employers to set their faces against organized labor. The jurisdictional dispute must go if trade unionism is to fulfill its high purpose in our national industrial life.

I would have trade organizations foster a spirit of loyalty, of loyalty to fellow workers, to craft, to industry and to employer. I would be slow to use the strike weapon.

## Against Force Efforts

I am not one of those who believe that you can force industrial peace into being by legal enactment. There is much talk nowadays of compulsory arbitration of labor disputes in one form or another, but the principle does not seem sound to me. Strikes and lockouts have been with us since the days when the Hebrews in Egypt refused to make brick without straw. They are with us today, and will be with us so long as employers seek to impose unbearable conditions upon workers, or workers endeavor to obtain more from industry than they are entitled to. The remedy lies not in the intervention of government, or any other authority between employer and employee, but in direct negotiation and mutual understanding.

The misery and evils of the strike are well known to me. I have experienced

the trials of the strike as a worker, and as Secretary of Labor a constant stream of industrial disputes flows over my desk. The tragedy of every strike, it seems to me is that ultimately it is settled by negotiation. After men have been idle for months, after women and children have been brought down to the last crust of bread, the representatives of the disputing sides get together around the council table and reach a settlement. They begin right where they were when the months of misery started. In almost every case both employer and worker have lost by reason of the conflict. Instead of calling a conference after months of industrial struggle, I would have the council table called in before the strike is begun. It is far better for both sides to compromise before a strike is called and eliminate the cost to both sides which must be paid for every suspension of industry. Let both management and worker remember that the best way to raise wages is to cut waste and increase production. When the employer moves forward, the worker must progress.

## Reflected in Wages

Increased production, better quality of work, means reduced production costs, which every wise employer will see to it are reflected in higher wages. Any employer would rather pay \$10 a day to the worker whose labor will give him a profit of \$8 than to pay \$5 a day to the worker whose labor will net a profit of only \$2. It is not wise for men and management in any industry to wait for the time of trouble before getting together. When business is prosperous is the time for worker and employer to work out plans for the stabilization of conditions in their industry, to devise ways and means for meeting the periods of depression which are bound to come. Men and management in industry working with a clear understanding of each other's problems and seated around the council table, can

solve their own problems better than any outside, agency, government endorsed, otherwise, can solve them.

One thing we may well congratulate ourselves upon in the United States. American labor has always been loyal. We have no great red radical element among the leaders of American organized labor to threaten the perpetuity of our institutions. It is the eternal credit of the leadership of American labor that the elements of anarchy and sovietism which have permeated the workers of so many countries have found no foothold here. The anarchist and the bomb-thrower have found in American labor nothing but stony ground for the seeds of their propaganda. American labor is truly American. It believes in those principles of representative government upon which our national existence was founded. It has and it will always reject any leadership which seeks to undermine those eternal fundamentals of:

Liberty under law;  
The right of free labor;  
The right of free contract;  
The right of protection of life and property.

In many cities employers and workers in the building trades are co-operating in an effort to supply the constantly increasing demand for men trained in the building crafts. In Cleveland a real success has been made of a combination of the apprentice system and the trade school plan. This problem can only be met through co-operation, for it is a problem which is vital to both workers and employers in the industry. Its magnitude may be seen in the fact that in construction work alone the industry calls for an annual supply of 35,000 additional skilled workers and 12,000 unskilled workers to replace losses caused by death, old age and similar causes.

In the field of unskilled labor immigration enters into the problem. We face increasing difficulty in getting Americans to do our common labor, to wield the pick and shovel, to haul the bricks and mortar. For many years we have depended upon immigration to supply us with this class of workers. It is vitally important, therefore that we have a safe, sane, American policy as to immigration a policy that will give us immigrants who are best for this country, who will fit into our scheme of things, who will meet the needs of our economic, social and political life.

(This text presents the substance of a speech delivered by Secretary Davis before the Cleveland Builders' Exchange, November 21.)

Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.

Contractors throughout the entire country now are laying plans to attend the Fifth Annual Meeting of the Associated General Contractors of America, to be held January 21, 22, 23 and 24 in Chicago. Officials of the organization state that indications already assure a record breaking attendance.

The convention is to be held during the week immediately following the annual sessions of the American Road Builders' Association and the Road Show, and a joint meeting of this body with the Executive Board of the contractors' organization will be held January 17.

"Cut Construction Costs": this is to be the key note of the convention. The attack upon costs mainly will be launched through the medium of efforts aiming at fullest capitalization of weather conditions favorable to construction operations, an increased volume of winter building, and storage of building materials during periods of the year when construction is at its lowest ebb. By utilization of these means, it is being pointed out, the contractors' overhead will be reduced. They will be able to avoid the extra expense entailed by the present "sprint and spurt" character of the year as regards construction. They also will be able to hold skillful organizations together.

Not only will contractors who are anxious to secure the benefit of detailed discussion leading to conclusions attend these sessions, officials declare, but engineers and architects in large numbers will be present to make first hand observations of the developments.

Though strong emphasis is to be placed upon the subject of cost reduction, largely because of the public service involved, many other subjects have advanced through the past twelve months to the point where they are ready to be acted upon by the national assembly of contractors.

The list of speakers carried on the tentative program includes many leaders of the construction industry and noted observers of economic conditions peculiar to construction operations.

The program for the joint session with the Road Builders' Association follows:

Chairman: John W. Cowper, president Associated General Contractors of America.

The Purpose and Progress of Equipment Standardization: Address by C. E. Bement, president Novo Engine Co., Lansing, Michigan.

Standard Highway Contracts a Public Service: Address by General R. C. Marshall, Jr., general manager, Associated General Contractors of America.

Economic Aspects of Day Labor Construction: Address by Arthur S. Bent, Bent Brothers, Los Angeles, California.

Bonds as a Gauge of Responsibility: Address by N. F. Helmers, of Seims, Helmers and Shaffner St. Paul, Minn.

The program for the general sessions is being prepared with the aim of allowing no subject of importance to pass without receiving its proper quota of emphasis, attention and discussion. The speakers all are acknowledged to be clear of vision and able of expression.

Addresses will be delivered on the following and other subjects, according to the tentative program:

Economic aspects of day labor.

The trend of construction.

Operation of the income-tax law.

Views on building labor.

How to cut construction costs.

Purpose and progress of equipment standardization.

How to make concrete mixer standards effective.

Trade associations.

Collegiate preparation for contractors.

Addresses on the following subjects are to be delivered before the indicated divisions of the organization at their separate meetings:

Quantity surveys.

Relationships between the highway commission and the contractor.

Resumption of railway construction.

Central concrete mixing plants.

Bonds as a gauge of responsibility.

Annual report of joint committee of American Association of State Highway Officials and the Associated General Contractors.

Applications for reduced railroad rates have been filed by Washington headquarters with the railway passenger associations, and favorable action in the very near future is expected. These rates will carry the usual one-half reduction on return trip.

Requests for hotel reservations are being handled at the Washington headquarters of the organization. Provision in this connection has been made by block reservations at the La Salle Hotel, which will be convention headquarters. These reservations will accommodate approximately 500 people, a total of 300 rooms being set aside for the Associated General Contractors' members during the period from January 21 to the close of the convention. Reservation of 30 rooms has been made to begin January 17, the date of the joint meeting of the Road Builders' Association and the Associated General Contractors' Executive Board.

Contrast to the work-a-day side of the convention will be furnished in the extensive entertainment program. Naught more than that need be said in this connection. The General Contractors' Association of Chicago will be host to the visiting contractors and their ladies.

The annual banquet will be held on the night of the last day of the meeting, January 24, and plans already laid indicate that it will assume a notable position in the history of the organization. One week before this event, on the night of

January 17 the stag banquet of the American Road Builders' Association will be held, the allotment of tickets for this function to be made on the 15th, with previous application necessary.

The La Salle Hotel has 1,026 rooms. The rates per day follow: One person, with detached bath, \$2.50 to \$3.00; with private bath, \$4.00 to \$7.00. Two persons: Detached bath, \$4.00 to \$5.50; private bath \$6.00 to \$9.00. Two connecting rooms with bath: Two persons, \$6.50 to \$9.50; three persons, \$8.50 to \$11.50; four persons, \$10.00 to \$13.00.

## COMMUNITY PLANNING AND HOUSING

CLARENCE S. STEIN

### *Housing in Christiania*

In the past ten years the city of Christiania has spent about a hundred million kroner (roughly \$27,000,000) in erecting low rental dwellings. Yet Christiania is smaller, for instance, than Newark, New Jersey, and if New York City, for example, had built houses on a similar scale, toward a billion dollars would have been expended for that purpose during the same period, and the annual expenditures of the largest American city for housing would have constituted the heaviest item in the municipal budget.

Cities in general, the world over, may learn a lesson from the capital of Norway, for all large and growing communities, and even the smaller ones, have to realize what it means when private capital turns away from the production of that class of dwellings which are needed by the most people. In Europe, the measure of this development was, as is well known, widely experienced before the war, many cities suffering from an ever and ever more acute shortage in low-rental dwellings as well as from an increasing decline in the quality of such buildings as tenants were forced to accept. War or no war, the economic tendencies at the root of the trouble would have become quite as universal as they are today.

But Christiania offers a conspicuous example of what a city of a few hundred thousand people may achieve in endeavoring to relieve the shortage of low-cost dwellings. The municipality was forced to take action when, some twenty years ago, the production of this class of accommodations ceased. Even before, in the beginning of the nineties, the city had begun to feel the hardship, discomfort, and annoyance of a housing shortage, an experience which coincided with the rapid increase of population which began at that date and continued during the succeeding ten years. This growth offered a golden opportunity for speculative building, than which nothing more unfortunate can overtake a city. Through almost

the entire period of the nineties there was a feverish activity, resulting in such an overproduction of dwellings that in the year 1900 there were nearly 6 per cent. of vacancies—and Christiania began to experience the severest building crisis of its history. The crisis was aggravated in the years from 1900 to 1905, in which period the population actually decreased by a few thousand, in consequence of which not less than ten per cent. of the total number of dwellings were unoccupied in the latter year.

During the building boom which came to so disastrous an end, there had been built a great number of small dwellings, yet the output was relatively smaller than the demand because private capital had already shown a preference for investing in expensive apartment houses and business buildings. Norway at that time traversed a period of industrial expansion, of rising wages, of rising cost of well nigh everything, building materials not excepted. Speculation was growing. The cost of living was rising. Norway, in those years, exhibited signs of what is generally termed prosperity.

Industry grew fast in and around Christiania. It grew also in the provinces. But Christiania, the capital of the nation and its greatest city, was of course the economic and financial center of this development, where new companies were rapidly formed, new banks founded, and where retail trade flourished. Business demanded space. Thus many dwellings in the center of the city were pulled down and business buildings took their place. Apartment houses were converted into offices. Land prices rose rapidly. Building became more costly and luxurious than it had ever been. Rents increased. Many expensive apartment houses were built to house the relatively few wealthy or well-to-do. While to complete the picture of inflation and its effects, all the circumstances thus created combined in preparing a more permanently precarious housing situation—one which finally gave rise to a veritable housing problem.

During the early years of the present century tenants had enjoyed the benefits of a surplus of housing accommodation. The city was growing slowly and the previous overproduction had left an abundance which naturally caused rents to fall. But in 1905 the population began to increase at a more rapid rate, growing by nearly 30,000 in the succeeding ten years. It was then that the development entered the critical stage. In the year 1910 the percentage of vacancies had fallen to two per cent as against ten per cent. in 1905. In 1915 the vacancies fell to four-tenths of a per cent. Thus it may well be observed that the seriousness of the housing situation was a pre-war development, and that the war and

its consequences have merely had the effect of aggravating a condition which already was intolerable before 1914.

The building of small dwellings, already insufficient in number during the building boom of the nineties, had ceased. On the other hand, the boom had resulted in a surplus of more expensive dwellings, of which the supply was continuously ample to meet all needs. The situation gave ample evidence of the fact that private capital could no longer be relied upon to meet the requirements of the emergency, a conclusion which was reached by the majority of Christiania's municipal council. Could the municipality remain indifferent when facing a situation so menacing to the welfare of the community? Did not the experience so far gained sufficiently justify constructive municipal intervention in housing matters? Such an intervention had indeed been proposed in the early nineties in order to relieve the then threatening housing shortage, and the community had, in fact, built a few houses in the ensuing years. It seems safe to conclude, in view of later developments, that this first faltering step toward a constructive housing policy had been one in the right direction.

Today, the practical measures taken by the city of Christiania proclaim the answer to the questions raised. With justifiable pride the municipality can point to the remarkable results of nearly a dozen years of housing activity. During that time the city has gathered experience both regarding the difficulties attending and the possibilities of municipal housing. It need hardly be emphasized that the difficulties were enhanced by those very conditions which now make municipal housing more urgent than ever.

Several years before the effects of the war became most seriously felt, Christiania started construction. In 1912 the first beginning was made. In the earlier half of 1914 plans were completed for building on a much larger scale. Since that time, thousands of dwellings have been erected. A present-day visitor to Christiania would certainly miss something if he or she failed to see the results of municipal building activity. The old Christiania,—the remnants of what was built a hundred or more years ago,—can no more be seen. It was almost completely swept away by the extensive rebuilding of the nineties. Little remains to remind one of the ancient origin of the city. The center has been transformed into that diversified but not very enjoyable character which is stamped upon most of those old-world centers that became modernized during the later half of the nineteenth century. The Christiania which has thus disappeared was no doubt a city very modest in its appearance, but

those engaged in remaking it were not always so unassuming, for here, also, the vanity of architectural pretense was a stalking specter of bad taste.

Since that time, however, architecture has descended from its pedestal in Norway as elsewhere. Norwegian architects are once more able to design houses with a regard for simplicity, as is evidenced by the new Christiania which has arisen under the auspices of the municipality. More than that, there is also ample testimony that real city planning is practiced in Norway. The results are in visible evidence.

Primarily for this reason the visitor to Christiania should not miss the opportunity afforded. All around the city, in all of its outskirts, are to be found groups of municipal houses, well adapted for their purpose and harmoniously laid out. There is much variety in the planning. The aspect of sternness or severity which is sometimes thought to pervade Northern architecture is here mitigated by picturesque grouping. In general, the effect is agreeable and attractive. It is precisely the opposite of that hardness, coldness, and monotonous indifference which has so largely made great areas of our modern cities into a repulsive and inhuman jumble. Here again, as in ancient Greece, the word city seems to designate not primarily the streets and houses, but those who live in them. They have been considered in the planning, not merely as rent-paying tenants, but as human beings.

And is this not a precious impression to retain—for us, poor city-dwellers of today, surrounded as we are by the chilly atmosphere of the "house to be bought and sold," of the human warehouse of modern exploitation? Only those who can afford a house of their very own, can escape this atmosphere by fleeing from it at intermittent intervals. In Christiania, thanks to the municipal housing schemes, the chance of escape has been extended to at least some of those who, both economically and otherwise, are the victims of the housing systems that now universally prevail.

How different the result would have been if those areas, now occupied by Christiania's own houses, had been left to the exploitation of private enterprise. It is a hundred times more likely than unlikely that it would have been inferior, not only in its social and economic, but in its architectural aspects. Only where the result is good in all these respects are the objects of city planning fully attained. In Christiania the houses are spacious. Ample room is left for gardens and play spaces, and as the city remains the owner and the landlord the tenants need have no fear of the dread consequences of building speculation.

Thus it appears that the necessity of building dwelling-places, enforced on the

municipality of Christiania by the chain of circumstances which no modern city has escaped or can hope to escape, offered an opportunity of which the most was made. Indeed, so well was the opportunity realized that Christiania, as regards municipal housing, now stands first in Scandinavian countries. In all Europe, few municipalities have done as well.

Yet this is not all. Christiania has done much to relieve the housing shortage by other means. The city had aided private building activities in many ways. Loans aggregating tens of millions have been granted to private builders. Municipal credit has been pledged for loans, the total value of which is in tens of millions. Other easements of various kinds have been accorded. Building societies have been aided and their formation encouraged and practically facilitated. To promote these activities the Norwegian state has granted subsidies to the city, but most of the monies expended have been in the nature of purely municipal appropriations.

The initiative manifested makes a good showing, it would seem, for a city of little more than 250,000 inhabitants. Yet in engaging in these strenuous tasks of the present the city authorities were not unmindful of the future. Low-rental houses can be erected only on low-priced land—on land which is beyond the influence of speculation. If a community fails to acquire land, when it is at its cheapest, and before it has been acquired and held for speculation, all attempts at a constructive policy are doomed to failure.—*Journal of American Institute of Architects.*

## BUSINESS OUTLOOK

Notwithstanding the gloomy forebodings of the pessimists business is on a fairly stable basis and the threatened building slump freely predicted earlier in the year has failed to materialize. With material manufacturers catching upon back orders as a result of increased plant facilities, and no prospects of any serious labor troubles in the near future, the industry is faced with a condition that will mean uninterrupted activity for the balance of the year. The only difficulty at present is the labor shortage, but contractors will have to continue to work short handed until the trade school movement which has been given a good start begins to turn out skilled mechanics in sufficient numbers to make their presence felt.

Organizations can do something in the way of offsetting the work of the professional crepehangers who are going up and down the country telling people that the present era of prosperity cannot last and that a serious depression is just around

the corner. It is an accepted fact among psychologists that the state of one's mind has a decided bearing on the conditions of one's health, and the same is just as true in business. The business of building will be good just as long as those in it believe that it is. There is an old saying to the effect, "that there is nothing good or bad but thinking makes it so." Therefore, let everyone who may be tempted to think that next year will not be as good as this one has been, resolve to banish the thought from his mind, and in its place carry the idea that the present period of construction activity will continue for many months to come.—*Associated Contractor.*

## WHY PLASTER "POPS"

Lime which has been overburned or which has been burned during hydration is the cause of popping in plaster, tests made at the Bureau of Standards have shown. In this type of failure small particles appear to expand and push themselves out of the plaster, leaving tiny holes. In extreme cases these holes may be sufficiently large or numerous to be unsightly. It has been shown that popping will not be serious if the lime is ground fine enough to pass through a No. 50 sieve, as in that case the lime will be completely hydrated during the mixing and application, or else the particles of defective lime will be too small to cause noticeable holes.

These tests were made in co-operation with the National Lime Association, the Contracting Plasterers' Association and the International Plasterers' Union. Ninety-eight panels were erected containing different impurities in different sized particles. It was found that, with the possible exception of sand, impurities other than overburned lime did not cause popping no matter how coarse they were.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—*Making advertising pay.*

*The Oldest  
American  
Fire and Marine  
Insurance  
Company*

*Founded 1792*

## ***A Builder Carries Many Risks***

More than he would like, as a rule. There is one he need not assume. That is the fire risk. Always present, yes, but adequate insurance will cover the danger of loss.

Your agent can arrange to automatically increase the value of the policy as the operation progresses. Ask for a North America Builders' Risk Policy. It is sound indemnity.
